

A crucial investment update from James Boric - the stock market technician who led his readers to gains of 48.8%... 58.8%... up to 62.1% in just a few weeks...

The Amazing, Overlooked Investing Secret of the Man Who Made \$100 Million When the Stock Market Crashed in 1929...

...and How You Can Use His Secret to Triple Your Money in the Turbulent Markets Ahead

His name was Jesse Livermore, and he was the greatest stock trader who ever lived. He made tremendous fortunes during the Panic of 1907... the bull market of the 1920s... and even the crash of 1929. No matter which way the market moved, he made money.

And now you can take profitable advantage of Livermore's most important investing secret to get your portfolio

growing again as you earn double, or even triple digit gains in a matter of days - whether the market moves up, down, or sideways over the next six months...

Dear Friend,

Jesse Livermore has been dead for more than 60 years now - yet the investment strategies he used to build his hundred million dollar fortune are still relevant today. In fact, you can take advantage of those strategies to bring mind-blowing profits to your own portfolio in the days, weeks, and months ahead regardless of which way the market moves.

Gains like 62.1% on Gilead Sciences in less than a week... 58.8% on Johnson & Johnson... 48.84% on Nike in two weeks... and 45% on Cree in just one day.

And it's a lot easier and safer than you might imagine thanks to the unique and remarkably profitable investment service I'm going to introduce you to in a moment. As you'll see, it's a service that provides you with a deadly accurate system for making double- and triple-digit profits in the market up to 79% of the time regardless of whether stocks are moving up, down, or sideways.

But before I get into the details, I'd like to tell you a little bit about Jesse Livermore and the valuable lessons you can learn from the ups and downs of his storied career.

A Humble Beginning

When Jesse Livermore was just 14 years old, his father pulled him out of

"There is nothing new on

school, handed him a pair of overalls, and told him it was time to start working on the farm. The year was 1890 and Jesse's father believed it was a waste of time for a farm boy to get an education. And he could see no use for Jesse's obvious mathematical gifts - gifts he displayed at a very young age.

But Jesse and his mother had bigger plans. So, with his mother's help, young Jesse hopped a wagon to Boston to make his fortune in the big city. His only asset: a five dollar bill his mother had slipped him.

Wall Street or in stock speculation. What has happened in the past will happen again and again and again. This is because human nature does not change, and it is human emotion that always gets in the way of human intelligence."

- Jesse Livermore

As fate would have it, Jesse was dropped off in front of the local Paine Weber office. He walked in and immediately landed a job writing stock market quotes on a chalkboard. He found the work fascinating and was mesmerized by the constantly changing numbers.

Why Most Investors Lose Money

But Jesse was also fascinated by Paine Weber's clientele. He was astonished at how haphazardly they played the market. They did things differently every time they came into the office to trade.

One day they relied on hot tips. The next day they played the favorites. And on the next, they played the long shots. They made their investment decisions emotionally. They had no system, no plan. It was all random - as if they were just gambling, and hoping Lady Luck would look kindly upon them.

Most importantly, they all lost money.

All this randomness disturbed Jesse's precise mathematical mind. It made no sense to him. And it quickly became clear that if he was going to make money in the stock market, he'd have to devise a better way than what he saw everyday at Paine Weber.

So he studied the numbers that he wrote on the chalkboard - searching for patterns he could profitably exploit. Jesse was convinced that the market had an inherent logic all its own - and he was determined to figure out what it was so he could use that knowledge to profitably trade stocks.

Night after night, he returned to his dingy boardinghouse room and furiously entered notes and trends in a diary based on what he had observed in the market that day. He began developing his own theories and strategies on how to beat the market. And after two years he felt confident enough to begin testing them in the real world.

Banned from the Bucket Shops of Boston

The problem was, Jesse didn't have a stake - a wad of cash that he could use to start trading. So he went where all poor men with big ideas and little money went to play the market - the notorious "bucket shops" of Boston.

Operated by gangsters, bucket shops attracted stock market gamblers like moths to a flame. That's because anyone could open an account, and put up just 10 cents on the dollar to bet on a particular stock (no actual stocks were ever purchased). So if you had 50 cents you could borrow \$4.50, and bet all \$5 on the stock of your choice.

But the moment the value of the stock dropped, and you owed more than

90% of the stock's value, your position was closed and the shop kept the proceeds. The house won 95% of the time and most of their clients met financial ruin.

But not Jesse Livermore. Armed with his system, he soon found himself regularly beating the bucket shops - at the tender age of 16!

Before long he was making so much money that he quit his job at Paine Weber and played the bucket shops full time. Alas, the game couldn't last forever and within a few short years Jesse had been banned from every bucket shop in Boston. Winners simply weren't welcome.

Jesse's \$3 Million Windfall

Fortunately, Jesse was ready to take his strategies to Wall Street. And once he had successfully adapted them to the new environment, he began making money hand over fist. In fact, he did so well that by the year 1900 - when he was just 24 - he was able to travel to Europe, where he spent \$12,000 (\$253,000 in today's money) buying jewelry for his wife.

But it wasn't until the Panic of 1907 that Jesse really made his mark - and he did it in a big way. His analysis told him that the market was due for a serious correction. So he began shorting stocks like crazy. As he had foreseen, the market began dropping, and during the subsequent panic he made an astonishing \$3 million (\$58.6 million in 2003 dollars).

It seemed Jesse was on his way to tremendous fame and fortune. Even J.P. Morgan knew his name - and even asked for his help in stabilizing the stock market. It was a heady time for Jesse - but then he broke his own trading rules and within a year his \$3 million fortune was gone.

The Secret to Jesse Livermore's Success

Jesse Livermore's success in the market came because he had created a strict system with iron-clad rules for trading that eliminated emotion, bias, and opinion from his buying and selling decisions.

And he followed that system regardless of what his emotions told him. If his numbers said buy, he bought. If they said sell, he sold - regardless of what others thought, said, or did.

He also had a hard and fast rule that required cutting his losses quickly when he was wrong - usually after losing just 10%. When he was right, however, he let his profits run - though never for too long. He was willing to leave money on the table if he could lock in a substantial profit right now. He'd seen too many investors get greedy, wait too long to sell, and then wind up losing their profits.

He also refused to listen to investment tips, regardless of their source. He'd seen too many people lose their shirts thanks to hot tips and "inside information." He wasn't about to let that happen to him - especially when he had a system that worked so well.

Livermore's unique systems-based approach is rare among investors and investment advisors today - but it is the basis for ***MST Trader Alert***, the tremendously profitable investment service I mentioned at the beginning of this letter. And it works. Readers have had the opportunity to see profits of 45%... 48.8%... 50%... and even 62.1% by following a strict system modeled after Livermore's approach.

In a moment, I'll tell you all about ***MST Trader Alert*** and the windfall profits it can bring you in the days, weeks, and months ahead - but first let me continue with...

How Jesse Livermore Lost it All

When Jesse Livermore followed his system he almost invariably made money. But when he violated his rules, he lost money - sometimes millions of dollars.

"The only time I really ever lost money was when I broke my own rules."

- Jesse Livermore

And that's just what happened in 1908 when Livermore became friendly with the world's leading expert on the cotton market - Percy Thomas, "The Cotton King." Thomas was a knowledgeable, persuasive man, with thousand of spies throughout the South who regularly reported on crop conditions. And he was able to convince Livermore that supply and demand made it inevitable for cotton to go up in price - despite the fact that Livermore's own indicators showed exactly the opposite.

Unfortunately, Livermore was seduced by the power of Thomas' personality and wound up buying a large position in cotton - violating his strict rule against taking investment tips. It was one of the worst investment moves of his life.

Just as Livermore's indicators had warned, cotton began to fall almost immediately. But instead of selling - as his strict rules demanded - Livermore bought even more cotton. As cotton continued to fall, he actually sold a profitable position in wheat in order to meet a margin call. It was as if he'd thrown his rule book out the window.

By the time Livermore came to his senses and sold his position, he had just \$300,000 left. He had lost \$2.7 million practically overnight.

His confidence shattered, Livermore proceeded to make a series of bad

investment decisions that not only cost him the rest of his money, but left him more than a million dollars in debt (\$18.8 million in 2003 dollars).

Livermore's Triumphant Return

Many thought that was the end of Jesse Livermore, but he wasn't finished yet. Not even close. He simply stepped back, carefully analyzed what had gone wrong, and vowed never to make the same mistakes again.

And before long he was back on his feet, making money as quickly and easily as he had before. By 1916, he was once again a wealthy man and had repaid every one of his creditors - even paying off debts that had long since been forgiven through bankruptcy.

But he never forgot the lesson of 1908 - and never again followed or even listened to the advice of another trader. And during the 1920s he practically printed his own money as the stock market boomed.

However, as 1929 approached, he began to grow uneasy. Despite the optimism all around him on Wall Street, the numbers were telling him that things weren't quite right. In his view, the market was overheated and due for a massive correction - perhaps even a crash.

Livermore Makes a Fortune in the Great Crash

By the summer of 1929 he knew a top was near. He sold all his stocks and began shorting the market. By the time October rolled around, he was short more than a million shares - and profitable on almost all of them.

And then the market began to come apart, culminating on October 29, 1929 - Black Tuesday. The worst day in U.S. stock market history. As the market fell, Livermore covered his shorts. And when the dust settled, he

had cleared an estimated \$100 million - more than \$1 billion in today's dollars. All in less than a year. And all because he stuck with his system and sold even as everyone else was screaming "buy."

After such a windfall, the 1930s should have been the best years of Livermore's life. Unfortunately, they proved to be among his worst. His success in the stock market had often come at the expense of his family - and now his neglect began to catch up with him as his family proceeded to fall apart.

Worse yet, all his life Livermore had battled clinical depression - although no one called it that back then - and in the 1930s it began to consume him, plunging nearly every day into a darkness from which he could not escape.

As a result, Livermore lost his passion for trading and eventually his will to live. And in 1940, just 11 years after his greatest stock market triumph, Livermore took his own life - a tragic end for the greatest stock market trader the world had ever seen.

Where Most Investors Go Wrong... and How You Can Get it Profitably Right

Jesse Livermore has been dead for more than 63 years now, but the lessons he taught are still relevant and applicable today - though they are ignored by most investors and investment advisors who continue to allow emotions, hunches, and tips to rule their investment decisions.

"I believe that having the discipline to follow your rules is essential. Without specific, clear, and tested rules, speculators do not have any real chance of success. Why? Because speculators without a

The good news is, you can escape that costly trap. And I'd like to help. My name is James Boric and I'm the editor of ***MST Trader Alert*** - a unique trading service that uses three powerful technical indicators to automate the investment selection process - taking emotion out of it completely.

As you'll see in a moment, ***MST Trader Alert*** borrows heavily from the techniques and strategies taught and practiced by Jesse Livermore over his long and storied career. With ***MST Trader Alert*** in your corner...

plan are like a general without a strategy, and therefore without an actionable battle plan. Speculators without a single clear plan can only act and react, act and react, to the slings and arrows of stock market misfortune, until finally they are defeated."

- Jesse Livermore

- **You'll have the opportunity to earn double and triple digit profits** in both up and down markets, usually in a matter of just days or weeks.
- **Your profits are automatic.** When my MST system generates a buy signal, we buy. When it generates a sell signal, we sell. Period. No ifs, ands, buts, emotions, or outside opinions allowed.
- **Your risk is controlled.** I want to sleep at night - and I'll bet you do, too. That's why the system has three layers of profit protection - three technical indicators that must line up in exactly the same way before I'll make a recommendation.
- **You'll never fear a bear market again.** My system works just as well in a bear market as in a bull market - and brings you profits in both. And remember, Jesse Livermore made his biggest profits in bear markets.

Double Your Money... and then Double it

Again... and Again

As I mentioned, my MST System relies on three powerful technical indicators to identify stocks that are poised to make a big move up or down.

When a stock is about to take off, I recommend a *call option*, which provides you with far more leverage and much bigger profits than you'd get from just buying the stock (though you can always buy the stock if you prefer).

When a stock is about to take a dive, I recommend a put option. You get the same leverage as you get with call options - and you avoid the dangerous unlimited risk that comes with shorting a stock.

For example, a recent put option on Gilead Sciences earned my subscribers could have seen 62.1% on their money in just one day - though the actual stock fell just 4.5%. A call option on Johnson & Johnson reaped a 58.8% gain in less than two weeks - while the actual stock rose just 3.5%.

A put option I recommended on Wendy's International earned a 40% gain in less than a week - though Wendy's stock only fell 1.9%. Meanwhile, a call option on TiVo shot up 37.5% in just six hours, as the stock itself rose just 13.2%.

As you can see, options have the ability to provide you with profits that dwarf those of the underlying stock - by as much as 10 times or more! And these aren't isolated examples.

My subscribers also saw 50% on ICOS in just five days... 45% on Cree in one day...15.9% on NetEast.com in

"Nice work on Winn Dixie. I bought \$5 July calls on your

seven days... 56%% on Matrixx Initiatives in 1 day ... and 11.10% on Tech Data in 16 days.

We also earned 48.84% on in less than two weeks on Nike... 23.40% in 11 days on GTECH Holdings ... 13.9% in 13 days on Schering-Plough ... and 13% in six days on Martek Biosciences.

stock buy recommendation, and almost bailed out until you issued your last statement saying to hang in there. My options are up 70% with what looks like more upside. Thank you!!"

- Josh Z.

These are the kinds of returns that can make your retirement dreams come true... fund a child or grandchild's college education... and make you the envy of everyone you know.

Sure I occasionally recommend a loser, such as another option on Matrixx Initiatives that lost 20%. Of course, nothing is guaranteed. There are always risks associated with investing. But my winners far outnumber my losers - and their gains overwhelm any losses. In fact, my overall winning percentage in 2004 is 79%. That's a number I'll put up against any advisor in the business.

Rave Reviews from My Subscribers

Perhaps the best testament to the power of the MST system is what my subscribers have to say. Here's just a small sampling of the literally hundreds of letters I've received from ecstatic subscribers:

"I am a new subscriber to your service and have already made \$11,000 profit on your last two recommendations. CC and DELL. MANY, MANY, THANKS!!!!!" - A.S.

"I just wanted to say out of several other option newsletters I have subscribed to from other editors, yours is absolutely the best and most accurate and you have always been right on the money!" - Gary B.

"This was my first ever option trade. Bought the TUKFA call on May 20th for \$2.25. Sold it this mornin' May 26th for \$3.50 for a 55.55% profit in SIX DAYS! Wow!! Thank you for a GREAT SERVICE!!! Your advice is truly appreciated." - Mark P.

"Bought ten contracts at \$1.60 and just closed out at \$2.55 for a gross profit of 62.75%. Please place another feather in your cap. Thanks again." - James D.

The Secret to My Trading Success

The credit for these rave reviews - and the spectacular track record that inspired them - goes to my MST system.

It's a unique system that's built around not one, not two, but three powerful technical indicators - and each one must independently flash a buy or sell signal for a specific stock before I'll recommend it.

Relying on just one or two indicators - as some advisors do - is just too darn risky for me. But when all three give me the same signal, I can rest easy knowing that I'm giving you the absolute best, most profitable recommendations - with the least amount of risk possible.

And with this system in place, you'll find yourself doubling your money and then doubling it again, month after month, year after year - piling up windfall profits that you've only dreamed of in the past.

In the next few minutes I'd like to

give you a brief overview of my system and show you how it works. Parts of it are technical, so I fully expect your eyes to glaze over from time to time. But the nice thing is, you don't have to understand any of this tech-speak to profitably follow my system.

That's because I leave nothing to chance and give you clear cut buy and sell signals with specific instructions on what to buy or sell and when.

"Fantastic Tivo trade. I bought at 2.40 and sold at 3.90. The last two months trading MST options have been the best I have had in my six years of trading both futures and equities (mostly breaking about even). Thanks - my retirement years are looking truly golden. Please keep it going."

- Bill K.

And it all starts with a sophisticated computer program that scans more than 9,000 stocks every single day - relentlessly searching for that rare stock that meets the criteria built into my three indicators. Those indicators are Momentum, Strength, and Trend (hence MST), and when a stock has all three in its favor, it's an opportunity for you to make double and triple digit profits in a matter of just days or weeks.

Put the Big Mo' in Your Favor

The first thing my system looks for is *momentum*. As physicists say, "A body in motion tends to stay in motion." And the same is true of stocks. Once a stock gets moving in one direction or another, it tends to keep moving. It takes on a life of its own.

That's because when a stock begins moving up, investors jump on board and keep the ball rolling. When a stock moves down, investors abandon ship and push the stock down even further.

Identify these stocks ahead of time and you can clean up - in both directions. And you do that with a technical indicator that reveals who's winning out between the bulls (the people buying stock) and the bears (the people selling stock).

That same indicator also tells me when a stock has been oversold (beaten down beyond reason) or overbought (more expensive than is reasonable).

You want to *buy* a stock when it is oversold and the bulls are starting to overtake the bears.

Conversely, you want to *short* a stock when it is overbought and the bears are more powerful than the bulls.

The indicator I use is called a Slow Stochastic Oscillator (SSO). I know - just the name alone makes your eyes glaze over - and with good reason. And while it is a bit complicated, it's really nothing more than a graph with two lines.

The first is a fast-moving line that measures how the stock's recent closing price compares to its closing price on the previous 26 days. The second is a slow-moving line plots the stock's moving average over the same time period. Both lines are plotted on a scale of zero to 100.

When the fast-moving line crosses *above* the slow-moving line and it's below 25 on the scale, this indicates that more people are buying the stock than selling it - and that means the stock could be due for fast, explosive gains.

When the fast-moving line crosses *below* the slow-moving line and it's above 80 on the scale, this indicates that more people are selling the stock than buying it - and that means you can make some fast money shorting

the stock.

Take a look at the chart below, which identified Johnson & Johnson as a stock with rising Momentum...

As you can see, Johnson & Johnson's the fast-moving line (in green) crossed above the slower-moving line (in black) at 12 p.m. on January 20. This signaled that the bulls were outpacing the bears and that Johnson & Johnson was a likely candidate to rise to rise - quickly.

However, as promising as that is, it's not enough to merit a recommendation. Once I established that Johnson & Johnson has sufficient momentum, I wanted to know how strong that momentum was. And that's where part two of the MST System comes in - Strength. I want to know if the stock's momentum has...

The Strength of a Schwarzenegger... or a 98-Pound Weakling...

To measure the strength of a stock's momentum, I use something called a Relative Strength Index (RSI). It's a little friendlier-sounding than Slow Stochastic Oscillator, but again it's a chart with values plotted on a scale of zero to 100.

However, this chart measures a stock's closing price over a 14-day period. It adds up all of the days when the stock closed *higher* than the day before. And it adds up all the days when the stock closed *lower* than the day before.

When a stock closes above its opening price more than it falls below it, its relative strength increases. When its relative strength is *below* 50 and starting to rise that's when you want to go long and buy the stock.

But when a stock closes below its opening price more than it rises above it, and its relative strength is *above* 50 and starting to fall, that's when you want to get out - or short the stock for profits.

If you look at the chart below, you'll see that Johnson & Johnson's Strength reading was rising by 12 p.m. on January 20 - in unison with the Momentum indicator. (In fact, its RSI reading jumped almost 15 points in less than two days - a hugely bullish move!)

This was a clear indication that the bulls were out in full force.

Once a stock has both Momentum and Strength on its side, I know I'm on to something. But before I make a move, I want confirmation from my third indicator - Trend.

Trade in the Direction a Stock Is Headed for Fast and Predictable Profits

My trend indicator is further confirmation that a stock is headed up or down. In fact, this indicator is so powerful that many investors make trades based on it alone - and I'm often tempted to recommend the same. But that would expose you to entirely too much risk. However, when Trend is confirmed by Momentum and Strength, then I know I'm on to something big and profitable.

To confirm a stock's trend I rely on an indicator called Moving Average Convergence Divergence (MACD).

An MACD indicator uses a series of moving averages to spot a trend. A moving average is exactly what it sounds like. It's the stock's average price over a given time. So if a stock closed at \$5 on Jan. 2, \$6 on Jan. 3 and \$7 on Jan. 4, the three-day moving average for that stock is \$6. (Add \$5 + \$6 + \$7 and then divide by three.)

Without getting too complicated, there are two lines in an MACD indicator: a signal line and an MACD line.

The MACD line is made up of a stock's 26-day moving average and 12-day moving average.

The signal line is made up of the MACD line smoothed over with a stock's nine-day moving average. It responds to price changes much slower.

When the MACD line crosses ABOVE the signal line, an upward trend is likely forming. This is when you want to go long.

And when the MACD line crosses BELOW the signal line, a downward trend is likely forming. This is when you want to sell short a stock.

The chart below shows what happened...

As you can see, Johnson & Johnson already had Trend on its side by the time the other indicators flashed a buy signal. That's because on January 22nd, the MACD line (in black) crossed above the signal line (in green) - confirming that Johnson & Johnson was in the beginning stages of an uptrend.

Combine that with the positive signals from my Momentum and Strength indicators and I knew Johnson & Johnson was due to pop up - and quickly. And sure enough, over the next 13 days the stock rose 3.5% - enough to drive our recommended call options up by an astonishing 58.8%. All in less than two weeks!

Putting It All Together - Triggering a Triple-Play

When Momentum, Strength, and Trend are all going in the same direction at the same time it creates what I call a "triple play." And, as you can see from the 58.8% our subscribers made on Johnson & Johnson in the example above, these triple-plays give you the best chance to multiply your money quickly and explosively - just as our subscribers saw with Gilead Sciences (62.1% in one day)... ICOS (50% in five days)... and Nike (48.84% in less than two weeks).

"I wanted to thank you for another great, timely trade. I bought 12 contracts of GILD 55 puts at 1.55 and sold them less than 48 hours later for 2.50. Please keep up the outstanding reco's!"

- Cliff S.

As soon as my computer notifies me that it has identified a triple-play, I immediately send you an e-mail with details about the recommended trade.

In plain English, I spell out exactly what triggered my recommendation - including the actual charts illustrating the signal - and I tell you exactly what action to take so nothing is left to chance.

All you have to do is read my "Action to Take" instructions to your broker - and he'll take care of the rest. Naturally, you can also make your trades online if you like.

However, since the Triple Plays my system uncovers move very fast, it's critical that you act immediately once you receive a trade recommendation. Fortunately, the entire process takes just seven minutes from start to finish.

Now, I can't tell you in advance how many Triple-Play opportunities will arise over the next few months - that's for the markets to decide. But I can tell you that we've had as few as one and as many as eight

recommendations each month.

And I can promise you this: When a Triple-Play recommendation comes by e-mail, it's because my *MST System* feels it represents the very best opportunity the market currently has to offer to make a substantial amount of money in a very short time.

That explains how my subscribers have been able to earn returns of 45%... 48.84%... 58.8%... and even 62.1%. And now you can join them...

Try *MST Trader Alert* for 30 Days RISK-FREE!

I'm so confident that *MST Trader Alert* is going to bring you the massive profits you've been looking for that I'll let you try it for 30 days at my risk. On top of that, for a limited time you can subscribe at up to 33% savings - and receive two FREE Special Reports to help you make the most of your subscription.

The regular price for a one-year subscription to *MST Trader Alert* is \$1,195 - an astounding bargain when you consider the windfall profits my system can bring you. However, for a limited time you can subscribe for a full year for just \$895 - a 25% savings.

"Great trade. That one move paid for the subscription for the whole year. Thanks."

- Theodore R.

Or subscribe for two years for just \$1,595 - a 33% savings off the regular two-year price.

You can also try the *MST System* on a quarterly basis for \$300 per quarter. We'll simply bill your credit card automatically each quarter until you tell us to stop.

Regardless of which option you choose, you'll receive two terrific Special Reports absolutely FREE.

For starters, you get ***The Insider's Guide to Using MST System.*** This remarkable report reveals the ins and outs of the MST System... why it's so accurate and powerful... and how you can use the system to maximize your profits in the months ahead.

You'll also receive a second FREE report I've just completed called ***The Livermore Principle: How You Can Profitably Use the Secrets of the World's Greatest Stock Trader.*** This amazing report reveals the investment secrets that Jesse Livermore used to earn millions and millions of dollars in the stock market - including his \$100 million windfall during the crash of 1929. Plus, how Livermore timed the market... managed his money... kept his emotions under control and out of his investment decisions... and much, much more.

Once we receive your subscription order, immediately you'll receive instructions for downloading your two FREE reports from our web site.

And then you'll have a full 30 days to decide if ***MST Trader Alert*** is for you. Put my system to the test for 30 days. Track my recommended trades. Then, if you're not absolutely ecstatic about the gains you're seeing, simply let us know and we'll instantly refund every penny you paid - with no questions asked. The FREE reports will be yours to keep for your trouble.

Cancel anytime after the 30-day period and you'll receive a full refund on the unused portion of your subscription. And again, both reports are yours to keep for your trouble.

Get on Board Now... Before It's Too Late

Because of the nature ***MST Trader Alert*** I have to strictly limit the number of subscriptions. The options market is simply too thin to handle the volume of orders that would come from a newsletter with tens of thousands of subscribers.

As Jesse Livermore discovered so many years ago, you need to follow a strict system to maximize your stock market profits. And that's just what ***MST Trader Alert*** - brings you. It's a one-of-a-kind system that will help you make fast double- and triple digit profits in today's market.

"James, I am really enjoying your service! YOU are teaching me about being a disciplined trader and how to make money. Thanks and keep up the good work."

- Roger H.

I don't want you to be disappointed, so I urge you to act quickly. Claim your FREE copies of ***The Insider's Guide to Using MST System*** and ***The Livermore Principle*** by starting your subscription today. Then you can begin enjoying returns of 45%... 48.84%... 58.8%... and even 62.1% like the rest of my subscribers. And those returns will come in just a few days or weeks - whether the market is moving up, down, or sideways.

MST Trader Alert - Your Critical Tool for the Turbulent Markets Ahead

I don't make stock market predictions. I let the market tell me what's happening. But investors tell me they're fearful another costly bear market may be in the offing. And with the market's high valuations and the skittish economy, I don't blame them. We could very well be facing some turbulent times ahead.

But that doesn't worry me - nor does it

worry subscribers to ***MST Trader Alert***. That's because you can make money when stocks go up and you can make money when stocks go down. It makes no difference to me. The system is equally effective either way.

***"James, thanks for your advice.
I made \$2,460, getting in @
1.85, and out @ 2.90!"***

- Huong N.

And don't forget, Jesse Livermore made most of his money when the market went down. I can't guarantee we'll do the same, but when you consider that the market usually falls a lot faster than it rises, it's likely we'll do even better if a bear market does erupt - especially since, like Livermore, we have a powerful system that automatically lets us in on the best profit opportunities again and again..

The bottom line with my MST System is this: It simply doesn't matter which way the market is trading - up or down. There are ALWAYS opportunities to make money. And my system will help you find them.

There's Plenty of Money to Be Made in the Months Ahead - Don't Miss Out

With ***MST Trader Alert*** you receive:

- Instant e-mail alerts the moment the MST System signals a Triple Play - with a clear, specific "Action to Take" spelled out in every e-mail. And when any one of my three indicators shows evidence of any reversing, you'll receive an alert telling you it's time you get out.
- A savings of up to 33% during this introductory period.
- AND as a part of your subscription you'll also receive the PENNY SLEUTH email. Penny Sleuth will give you a detailed look inside the small-cap market -- opening your eyes to huge profit opportunities

every week. And the best part is -- it's 100% free for signing up to MST Trader Alert.

- Two FREE gifts - *The Insider's Guide to Using MST System* and *The Livermore Principle* - to help you get started fast.
- **AND** as a part of your subscription you'll also receive the **PENNY SEULTH** email. *Penny Sleuth* will give you a detailed look inside the small-cap market - opening your eyes to huge profit opportunities every week. And the best part is - it's 100% free for signing up to **MST Trader Alert**.
- If you're not 100% satisfied for any reason whatsoever, you'll receive a 100% money-back guarantee for the first 30 days - and a full refund on the remainder of your subscription after that. And both reports are yours to keep regardless of what you decide

All this - coupled with the double and triple digit profits you could be making in a matter of weeks - makes this a no-brainer decision for you. I urge you to click the "Subscribe Now" button below and enter your subscription today. Within a matter of days, you'll be seeing gains you've only dreamed of in the past. Click the "**Subscribe Now**" button right now.

Sincerely,

James Boric,
Editor and Creator, *MST System*

P.S. Emotions have brought big losses to millions of investors over the years. But it's not just the fear and greed you're always hearing about. It's also attachments to a particular stock or market sector. It's wanting to believe that a hot tip will work out. It's hanging on to a losing stock because you hope it will come back. But with my MST System in your corner, everything is automatic and emotion-free. My system gives a

signal, we send out an e-mail, and you take action. It's that simple and that automatic. **Get aboard today by clicking the button below.**
