

Daniel Denning, who predicted the massive profit explosion in the 2003-2004 gold market, begs you to heed this urgent message:

**Protect Your Money and Pile up
as Much as 794% Profits
During...**

**China's Deliberate
ECONOMIC ATTACK
ON AMERICA!**

**Beijing just unleashed a deadly three-prong
attack that will levy a FINANCIAL
FIRESTORM
on the American economy. Before it's over,
many billions of dollars will vanish into thin
air!**

**But these two simple investments can
protect you.
In fact, not only will they "China-proof" your
portfolio... they can give you super-
*safe-haven profits as high as 794%..***

WATCH OUT!

**China's "UNRESTRICTED" ATTACK on the
American Economy Has Already Begun...**

**Find out about these two simple
investments to completely "China-Proof"
your wealth AND to *rake in safe-haven
profits that could go as high as 794%...***

Dear Friend,

I hope you're ready.

Because whether you realize it or not, Beijing's military government has just declared a hidden WAR on the American way of life! Yep, that's right.

Over the next five minutes, you'll read about something so

shocking, The ***Vancouver Sun*** calls it, "**The big sword overhanging the U.S. economy.**"

The ***Irish Independent*** says it could "**rip the heart out of manufacturing growth in Europe and America.**"

And the ***New York Times*** says this savage cycle of financial malice could actually destroy "**the very stability of the global economy.**"

I'm talking, of course, about China's jaw-dropping economic growth over the last several years running. History has never seen a country grow this fast.

"The Chinese make the televisions. The Americans watch them."

Popular Chinese saying

I'm sure you already know there will be consequences. Big ones. Even the ***Asia Times*** is predicting a crisis "**more devastating to the U.S. economy than any nuclear strike.**"

But what I doubt you know -- yet -- is just how deep and deliberate this financial havoc will be. Over the next five minutes, you'll see how this threat from the East was actually designed to DESTROY the U.S. economic advantage.

Intentionally.

What follows is an imminent DISASTER for the bond market... DEVASTATION for the already-weak U.S. dollar... and absolute ANNIHLATION of most of the popular stocks on Wall Street!

If you're not careful, you stand to lose everything.

Watch as it happens.

Interest rates are virtually guaranteed to skyrocket... America's real estate bubble will POP like a balloon at a porcupine party... and the voracious financial backdraft that follows will literally suck the life out of America's so-called "recovery"...

I don't paint a pretty picture.

But that's only the bad news.

The good news is you can protect yourself!

Two Powerful Moves That Can Protect Your Money

I'm about to show you a powerful strategy that cannot only protect you... but it can make you an incredible **794% profit**. It's easy to do.

Of course nothing is a sure thing but this is pretty close. Just talk to any broker. Or log onto your favorite trading website on the Internet.

This strategy I'll reveal only takes about five minutes to execute. And you can get started with very little capital.

Because part of the strategy is a leveraged investment, you only risk what you put in. But you stand to make many, many times that in financial "safe-haven" profits.

This strategy I'll reveal starts with two simple investment opportunities. Do just one, and I predict you'll make as much as 350% to 400%. Do the other, and you stand to make up to an additional eight times your money.

And combined, the whole package gives you a fortress in which you can safely park some of your wealth. Because I know already what this strategy is, I also know it's something you won't find anywhere else on the market today.

And I'll reveal it to you in just a second. But first...

How to Survive the Most Serious Financial Threat Since 1929

What follows is not a trend you can shrug off.

It's not a "recoverable blip" in the market.

Washington has no control over this. New York and Chicago brokers have no control over this. And Europe has no control over this either.

Which is why what I'm about to describe will turn out to be the most dramatic and serious financial threat America has faced since 1929!

I'm so worried about it, I've put together a **FREE** resource for investors. I will e-mail it to you, no

"Many economists believe that the Chinese currency is undervalued by as much as 40%, giving the country an unfair advantage in being able to underprice competitors in international markets."

charge. It's called "**Total Profit Protection From the Coming China Crisis!**" And again, it's **FREE**.

The Washington Times, Dec. 10, 2003

You'll find out exactly how - **step by step** - you can pile up as much as **794% gains** while you fortify your wealth against the winds of crisis ahead. I've promised you that much already. But then I'll also e-mail you three more **FREE** reports that show you...

- **How to make up to 455% on a buy-and-hold mutual fund!**
- **A dozen ways to make Asia gains without buying Chinese stocks!**
- **How to lock in up to 953% profits on the next leg of the gold-market boom!**
- **And how to sock away as much as 10 times your money on what I firmly predict will be a breathtaking 20-year boom in commodities!**

It's all **FREE**, as part of the **STRATEGIC PROFITS PROTECTION LIBRARY** I've put together just for you. But I'm getting ahead of myself.

First, let's dig into the sordid details of the crisis ahead...

"Beijing's Secret War on America"

Look, by now you might be wondering if I've got some sort of personal vendetta against China. No! That's not the case

How China Expects To Win

"The first rule of unrestricted warfare is

at all.

I've got nothing against China or the Chinese. In fact, I'm making plans right now to go there and all around the rest of Asia do research on the massive investment opportunities already under way.

China has an unbelievable history. They have lots of culture. Three thousand years ago, they were building palaces... while my ancestors were making mud patties on the English moors. So no, I'm under no delusions about the greatness China is capable of.

But that doesn't change the rest of the facts I'm about to show you.

When I show them to you, I'm confident you'll come to the same conclusions I have. You'll see instantly that what's quietly unraveling the fabric of the American economy... the exploding deficits, the massive

that there are no rules, with nothing forbidden."

- Col. Qiao Liang & Col. Wang
Xiangsui

China's People's Liberation Army,
and
co-authors of Unrestricted Warfare

Has there ever been a rising power, in the pages of history, that has picked up economic momentum... packed on military might... and then decided not to flex it's muscles? The answer, as you well know, is that there hasn't. Power is power. The nations that have it chomp at the bit to use it. Which is exactly what China is doing now. But you don't have to take my word for it.

Roger W. Robinson Jr -- head of the U.S.-China Economic and Security Review Commission -- gave this testimony to the U.S. House of Representatives back in October 2003. He laid out the Chinese blueprint for undermining the U.S. economy:

- **First, they devalue their currency by as much as 40%**
- **Then they issue tariffs on foreign goods**
- **They cut foreign firms off from**

trade gap, the joblessness, and even some secret aspects of the war on terrorism... is not only no accident, but it can all be traced back to, shockingly enough, Beijing.

Here's the "real" truth: Without a doubt, China's military government has actually masterminded adeliberate assault on the American way of life. I'm going to show you how they've done it.

It's a war. Not with tanks or missiles.

Not with jets, bullets, or guns. Or hand grenades.

The "combatants" in this battle wear business suits. They hit you with handshakes, contracts, and smiles. But don't be fooled. This is war without rules. In the words of one of their own military officers, "nothing is forbidden." **Without drawing a drop of blood, Beijing fully expects to win... and here's how they plan to do it:**

local marketing channels

- **They chaperone and handpick partners for international joint ventures**
- **They give preferential loans to their own factories from state banks**
- **Chinese companies get privileged listing on the Chinese stock market**
- **Chinese companies get special tax breaks not available to foreigners**

This assault on the American economy is already well under way. Whether they'll succeed or not we don't yet know. But for a long time to come, you'll need to protect yourself and your money. But you can also profit -- by as much as 794% or more. Click the "Subscribe Now" button below to send for your FREE set of the STRATEGIC PROFITS PROTECTION LIBRARY.

Guerilla Economics!

Step back for a second. And remember...

When we talk about modern China, we're not talking about a democracy. We're talking about a military dictatorship. Even now, in 2004. This is the way they do business.

I'm calling it "**guerilla economics**."

The goal is to destroy the competition. And at the same time... create a guaranteed money-making environment for China's own entrepreneurs. Is it working.

For China, absolutely...

Ding Lei is 32 years old. He's also the richest man in China. His **NetEase.com** outfit didn't crank out a nickel of profit until 2003. But his stock is up 50-fold thanks to ecstatic American investors, and **Ding is now personally worth \$900 million!**

Chen Tianqiao is just 30. In 1999, he ran a cartoon Web site. Now he runs **Shanda Networking**, an online gaming business out of Shanghai. New York venture capitalists helped him get started. **Now he's personally worth \$480 million.**

Larry Rong's dad is Rong Yiren, founder of **CITIC**. CITIC is the biggest company in China and a magnet for U.S. investment dollars. **Larry is personally worth \$850 million. His family is worth closer to \$2 billion.**

The military government of China has their hands deep in the pie too. Take China's biggest TV and cell phone maker, **TCL Corp.** It's state owned. **Last year they exported 3.83 million TVs. They expect to ship 5 million more!**

The top 100 richest people in China now have an average wealth of \$230 million. Another 10,000 or so more Chinese are worth at least \$10 million so far. And that's up from zero millionaires in China as recently as 1979.

"All Beijing has to do is to mention the possibility of a sell order going down the wires. It would devastate the U.S. economy more than any nuclear strike."

Asia Times, Jan. 23, 2004

Of course, most of the companies listed on the Shanghai exchange are still state-owned. The top 14 Chinese car-makers are state owned -- with bloated bureaucratic budgets. But that doesn't matter -- in 2003, U.S. investors poured millions and millions of dollars into China Brilliance Automotive shares -- and its stock shot up 232%!

For all appearances, it looks like China has cracked the code of Western capitalism.

Three years ago, for instance, China didn't manufacture a single laptop. NOW they make 40% of all laptops sold worldwide! They're also ranked as the world's biggest maker of computer hardware... consumer electronics... even steel (remember when that used to be Pittsburgh?).

China cranks out 38% of the world's cell phones. And half of the world's shoes. Plus most of the wooden furniture, video games, and televisions in the United States.

But guess what happens when you take a look at the other side of the coin...

Is This the End of the

American Miracle?

We're feeling the China boom right here at home, too.

But somehow it's not the same...

Here in the United States, **American Metal Ware** had made nearly 2.5 million pots in their Wisconsin factory... before they had to shut it down. Chinese manufactures stole the design and cranked out copies at half the price. To compete, Metal Ware had to move over to China.

Levi's were the all-American brand. They once had 63 U.S. plants. They just closed the last two and fired all the workers. Levi's will be made in China now.

Walt Disney was an all-American success story. But **Disney's** "Winnie the Pooh" dolls are made not here, but in the same place as Dr. Scholl's sandals and Foster Grant Sunglasses -- China.

How about **Wilson** tennis balls or **Black & Decker** drills? Silk flowers, sneakers, wood furniture, and hand-held "Game Boy" video games? All sold here, but all manufactured in... China.

A mind-blowing **80%** of all the toys, bikes, and Christmas tree ornaments sold in the United States came from China. Along with **90%** of the sporting goods and **95%** of the shoes.

Motorola spent over \$1 billion moving operations from the US to China. Thousands lost their jobs -- replaced by 10,000 Chinese workers in four new plants on the coast of the Yellow Sea.

Look, there's nothing wrong with making money. And you can't fault anybody for just doing business and looking out for their own best interests. **But at what cost? And whose expense?**

A New Hampshire radio show made a public dare:

"Take \$400 an hour at Wal-Mart. Buy as many 'Made In America' goods as you can."

Two listeners took the challenge.

An hour later, they hit the checkout line with a basketful of 40 items. Guess how many actually were made in America? Just 10.

It's no wonder. Sam Walton, Wal-Mart's founder, wrote an autobiography called "Made In America." But today, Wal-Mart alone imports a mind-blowing \$12 billion of goods from China every year...

That's more than China's trade with either Russia or the United Kingdom! How did this happen?

Beijing's Ugly SECRET #1: "Crush the Competition With Slave Labor!"

Chinese workers average 61¢ an hour. US factory workers average \$16 an hour. In other words, US workers make more in two weeks than most Chinese laborers make in a whole year!

Nobody outside of China can compete with that.

China gets an endless supply of labor for just pennies. And there's a waiting list nearly 200 million people long to take over those jobs when the current workers drop from exhaustion (they work 12 hour days, 7 days a week).

"We are beholden to the Chinese by our Treasuries. That worries me."

Carla Hills, Former U.S. trade representative

Moral or not, Beijing's slave-labor strategy does exactly what they hoped it would...

It's sucked the life out of America's more costly industrial complex!

Just check out the numbers: Over 450 U.S. companies are based in China. That's more than 10 times the number of U.S. companies there in 1990. They've got combined annual sales of \$23 billion. And more than 250,000 employees. In fact, U.S. investment in China is now a record \$33 billion a year!

Meanwhile...

Nearly 2,250 American manufacturing jobs here in the United States have disappeared... every single day! That's a not something new... it's been the trend day in and day out, over and over again... for 40 months straight!

What are the Chinese up to? They learned this trick from the Americans. Especially mega-rich superstars like Andrew Carnegie, John Rockefeller, and J. Pierpont Morgan.

It's the genius strategy of any savvy monopoly maker: First, move in and CRUSH the competition with cutthroat pricing. Then...

take away his business and leave him high and dry!

Thanks to slave labor, Chinese companies can crush U.S. competition with lots of cheap goods that USED to be made right here in America. In exchange, they not only get our purchases... they get our companies, when they're forced to pack up and move over to China so they can take advantage of the same cheap labor strategy.

What's more, China also gets to send a whole new kind of export to America... Chinese STOCKS! And in return for that, they get billions more in investment capital. Straight from the trading accounts of private U.S. investors. Imagine.

We're literally paying Beijing to "rip the heart" out of the U.S. heartland!

But it gets even better. Because that's only the FIRST dirty strategy engineered and overseen by Beijing. Here's the second...

Beijing's Dirty SECRET #2: "Bait the Trap With Treasury Notes!"

Another fallout from Beijing's supercheap labor strategy is America's massive trade deficit with China. It just keeps exploding.

As you can see in this chart, it's already passed a gap of over \$120 billion. That means we actually BUY \$120 billion more in

goods from China than we manage to SELL to them. A household can't get rich... or stay rich... if it spends more than it takes in. Neither can a nation.

Yet, no matter what we try to do to stop the gap from growing... weaken our dollars, create trade tariffs, perfect production and slash costs... America just can't keep up.

The trade deficit is now exploding \$1.5 billion per day. Putting that in perspective... **that means we spend an additional \$1 million on Chinese products... every single passing minute!**

But that's not the worst part. Guess what China is doing with all that money?

- First, the money we send China gets reinvested in the PLA, China's massive military. (New reports say China has just built low-profile military bases on several disputed reefs in the Philippines!).
- Second, it goes back into funding more huge Chinese factories. With 200 million Chinese looking for jobs, China needs to build places for them to work! It also needs to buy HUGE stockpiles of raw resources to keep the factories running.
- Third, and most dangerous of all, the Chinese government uses a lot of their extra exporting income... to pile up an absolutely SICK number of U.S. Treasury bonds!

That's right. China spends nearly **\$7.8 million an hour... or \$187 million a day...** snapping up US Treasuries and dollars. **The movers and shakers in China now hold the U.S. hostage to over \$120 billion in Treasuries!**

Now ask yourself:

If it's obvious that U.S. interest rates have nowhere to go but up... if it's obvious the U.S. dollar has nowhere to go but down... and if it's obvious that Washington right now is literally spending America into oblivion...

Why would the Chinese government sock so much faith in U.S. treasuries?

Simple. It's not a vote in America's future at all. Instead, it's Beijing's way of backing America into a corner! Think about it.

The Feb. 5, 2004 ***Wall Street Journal*** has already reported that other Asian countries -- who altogether with China and Japan included -- hold an eye-popping **\$1.9 TRILLION** in U.S. foreign reserves -- are starting to dump U.S. debt.

Korea and Thailand dumping is one thing. But when a massive holder like China stops buying U.S. debt and starts dumping, it's a much, MUCH bigger deal. Pressure on U.S. bond yields will skyrocket. Other foreign investors will run from dollar-priced securities in a panic. Long interest-rates will jump. **And U.S. consumers, businesses, and investors will get crushed in the jaws of a very powerful "Treasury Trap"!**

It won't take more than a whisper - "sell." And that's your signal. I promised earlier to show you how to protect yourself from exactly this kind of disaster. And that's precisely what you'll discover in your **FREE** e-mail report "**Total Profit Protection From the Coming China Crisis!**"

But before we dig into all that, let me share with you just one more piece of this sinister puzzle...

Beijing's Dangerous Strategy #3: "Lock the U.S. Dollar in a Death Struggle"

To finance all its foreign debt, the United States has to spend a breathtaking \$55 million per hour... or \$1.3 billion per day... just to keep enough liquidity in the system to cover overseas interest-payment obligations.

Washington treats the Federal Reserve like a money machine: Walk up, punch the buttons on the printing press, and out comes the cash!

Why? Because the more dollars there are, the less they're worth. And the less they're worth, the easier it is to cover those interest obligations without wincing.

Trouble is, no government -- not even one as large as America's -- can keep up with that kind of program. Especially when you're overextended on your own personal spending budget by nearly half a trillion (with a "t") dollars!

So just by holding U.S. Treasures, Beijing already has us trapped.

But they haven't stopped there.

"America's growing reliance on high quality, low-price Chinese imports eventually might undermine the U.S. defense industrial base."

**US-China Security Review
Commission Report**

China has ALSO hoarded piles and piles of ever-cheaper U.S. dollars. They've now got more than \$310 billion in U.S. dollar reserves! Again, you have to ask:

If U.S. dollars are backed by an overextended federal government... and if other major governments worldwide are already talking about switching reserves to gold and euros... if America's money isn't worth the paper it's printed on...

Why would China want to keep so much of their newfound wealth in the U.S. dollar, a currency that's already down more than 50% since October 2000?

Again, it's simple.

Since 1995, the Chinese currency -- the yuan -- has been pegged to the dollar at the weak exchange rate of 8.28 to the dollar. No matter how low the dollar goes, the yuan goes with it.

So no matter how low the dollar goes... it's virtually impossible to close any currency-related trading gap we've got with China! It's like seeing how long two enemies can hold their breath under water.

Whoever can withstand having a dirt-cheap currency the longest wins. But so far, judging just by the trading deficit, it looks like China is winning. And the U.S. is running out of options.

Could a stronger dollar shake loose the yuan's death grip?

Not at all. This is how the sinister yuan strategy works. If the dollar rises, the yuan rises in lock step. If the dollar drops, so does the yuan. China's trading advantage never disappears... but we risk

popping our own real estate bubble, slashing trade with Europe, and knocking the legs out from under stocks and bonds.

Meanwhile, China still has \$310 billion in dollar reserves... which it can trade for euros or gold at any time... and use to throw the dollar into a final death spiral.

When Beijing starts dumping, what follows could be worse for dollars than anything since Nixon broke with Bretton Woods in the 1970s.

Your **FREE** copy of "**Total Profit Protection From the Coming China Crisis!**" will also show you to protect yourself against this inevitable dollar collapse... with a strategies that can turnsevery \$1,000 invested into as much as \$78,400 or more. But first...

Still wondering how or why all of this could have been a planned economic attack... rather than just an accident of free-market capitalism? Still think all this is a coincidence? That's ok.

But before you make up your mind to the contrary, you'd better read this...

Strategic Investment: A History of Predicting History
by William Bonner

Right from the beginning -- over 19 years ago -- ***Strategic Investment*** has had a history of getting the world's most profitable trends right... and helping investors protect their money... and get richer!

- **We called the fall of the Berlin Wall in 1989.**

- We called the crash of the Japanese economy in 1990.
- We told investors the 1990 Gulf War would be "short." It lasted was 43 days.
- We said to get into Argentina when others ran - the market tripled.
- We called the same British Pound devaluation Soros did in 1992.
- We kept investors out of the 1987 crash.

In 2003 alone, we hit with...

- 113% gain on September .86 Euro FX calls
- 76% gain on DOW Diamonds June 03 76 puts
- 65% gain on DOW Diamonds June 03 88 puts
- Our readers have socked away 28% on Allied Defense.
- We made 89% in ASA Limited, a South African gold fund.
- There is a comfortable 13.3% so far accumulated in Walgreen Co.
- Up 38% in Curtis-Wright, a mid-cap defense stock
- Readers locked in 87.6% on Ducommun Inc.
- Just under 40% gains on iShares Emerging Markets Index Fund
- Another 26% so far in the Hong Kong Index Fund
- Plus, we're up 26% on our iShares Japan Index Fund
- We've seen gains of 15% on a Singapore fund, 12% in a Taiwan fund Readers' holdings in Glamis Gold are already up 50% and we're recommending that they buy more.
- Up over 50% on Newmont Mining
- Up 46% on the Prudent Bear Safe Harbor Fund

No question, the "Big Picture" is the way to invest if you want to build real wealth... by spotting Big Trends before the rest... and raking in very substantial profits ahead of the crowd! Join us in our next long round of profits.

Chinese Military Reports, "America Is the Enemy!"

If you still think I'm just speculating... that this couldn't possibly be planned... maybe you haven't heard yet about a hugely popular book that's still making the rounds... first in Beijing... and now at the White House, the Pentagon, and CIA headquarters.

The book is called "Unrestricted Warfare." It's written by Colonels Qiao Liang and Wang Xiangsui, two high-ranking officials in the People's Liberation Army of China (PLA).

America, says the book, is China's most likely enemy for at least the next two decades, if not for the whole 21st century. The battle, they say, will be fought everywhere.

"Wal-Mart, the U.S. retailer, now has more than 300 permanent buyers in China, and last year imported \$12 billion of Chinese goods... if Wal-Mart were a country, it would rank ahead of Great Britain and Russia in total imports."

The Irish Independent, Sept. 26, 2003

Drug smuggling... attacks on America's computer networks... media manipulation... intellectual piracy... exploiting loopholes in international law... and one of the most powerful weapons of all, **attacking America's financial base.**

Here's a direct quote from page 51 of the book:

"Financial war is a form of nonmilitary warfare which is just as terribly destructive as a bloody war, but in which no blood is

actually shed... When people revise the history books... the section on financial warfare will command the reader's utmost attention."

Beijing takes this book seriously. So does Washington.

The book also recommends Chinese companies infiltrate the U.S. stock market.

Imagine if the U.S. government started building companies just to drain income from Dow and Nasdaq investors. Imagine the U.S. Army taking over Motorola or QUALCOM so they could suck technology secrets out of other nations. Maybe it wouldn't happen here.

But it's business as usual in Beijing. With companies like PetroChina, the huge state-owned Chinese oil company. Or Hutchison-Whampoa, the state-owned Chinese construction conglomerate. Or COSCO, China's state-owned shipping giant.

The list goes on. As recently as 1999, the U.S. Congress named over 3,000 front companies for the Chinese army operating inside the United States!

Like I said...

Washington's got no grip on this. Neither does Wall Street. But you can do PLENTY to protect yourself. And make a handsome profit besides...

MONEY MAKER #1: How to Make 794%

Profits While Protecting Your Wealth

I should introduce myself. My name is Daniel Denning. I spearhead a group of private investors who have been following explosive profit trends like this China phenomenon...

Plus, the recent run-up in gold... Greenspan's interest-rate games... Bush's war in Iraq and the flood of profits in defense stocks... and much more.

Everything this private group does is centered on a strategic insights just like these. And every member of this group is a reader of my monthly investment advisory letter, ***Strategic Investment***.

It's one of the longest-standing investment letters in the industry... with a long history of huge, triple-digit gains... including better than 145%, 221%, 249%, 445%, 420%, 1,400%... and more. Just from pouncing on trends like these.

Strategic Investment readers discovered how to make **100% profits in one month** with MultiCorp... **92% profits with SouthWest Gold in one month and... 249% profits in just four months** on Philip Morris...

We've also made many other stunningly fast profits...

65% and 77% on Dow Diamonds puts... 45% on AngloGold... 87.6% on Ducommun... 39% on Oxford Health Plans... 28% on Allied Defense Group... 114% on Euro calls... another 171% on DJX puts...

But you're going to DWARF those gains when you take a gander at

the blockbuster double-play strategy in your **FREE** e-copy of my newest special investing report, "**Total Profit Protection From the Coming China Crisis!**" This is very simple.

It's made up of two steps.

You can do one, or both. It's up to you. But they're easy. And they take a minimum commitment of time and investing capital to set up. Here's how it works:

Let's start with the defending yourself against a falling dollar...

It used to be that the only way you could hedge against a currency was to take a huge chunk of cash down to the bank and throw it all into the foreign currency market.

This is what George Soros did in 1992, when he made a billion dollars in a single day on a crash of the British pound. But he had to leverage over \$10 billion to get that gain.

But it's not like that anymore. You don't need a huge pile of cash. And you don't need to buy the actual currency. You can profit from a delining dollar by buying outside the United States... and by buying commodities that are in huge demand by explosivlely growing nations.

In your **FREE** e-copy of "**Total Protection From the Coming China Crisis!**" I show you exactly how to do both with several blockbuster investment opportunities. They're low cost to get in. And all it takes is a phone call to set it up.

As long as the yuan is pegged to the dollar, Washington plans to

keep the dollar weak. But what they aren't telling you is they've already lost control. When the downward spiral begins, you could make at least eight times your money on this powerful strategy...

...Plus up to 400% on the Coming Bond Collapse!

OK, now let's look at protecting yourself from a bond market collapse. Remember, the Chinese hold an estimated \$120 billion in U.S. Treasuries. When they stop buying and start selling, it's crash time for the U.S. bond market.

Because to keep Treasuries attractive, interest rates have to go up. When interest rates go up, issued bonds with the lower yields look less valuable. And the bond market goes up in flames.

That's bad news for bond holders. But it's good news for you, if you know the strategy I recommend to profit from it. I lay out for you in "**Total Protection From the Coming**

How to Make 500% in Asia... Without Investing in Chinese Companies

When you pick an "*Exchange-Traded Fund*" (ETF) to invest in, it has to be (1) *liquid*, so you can sell quickly if you need to move your money somewhere else and (2) *inexpensive*, since some are much better priced than others.

Right now, ETFs are popping up to cover sectors of the Asian-Pacific countries left and right. Japan, Korea, Malaysia, Singapore, Taiwan, India, Australia, New Zealand...

They're further broken down by sector, by size of the companies they carry, by the indexes they trade on, and just about every other variation you can imagine. **Some are good, some are great, and some are excellent.** You could do the research yourself... or you could find out all about the five ETFs I'm recommending right now for my

China Crisis!" Some of my readers and I have profited twice in the last few months...

Strategic Investment readers... just click the "Subscribe Now" button for the FREE report I've put together. It's called, ***"How To Pile Up 500% Gains Investing Outside of China."***

In just eight days, we locked in 50%... in another four days, we socked away an extra 27%... but this is a bigger opportunity, with a slightly longer term. I expect you to make up to 400% or more just on this strategy.

My ***Strategic Investment*** readers and I made the same kinds of exponential profits when I showed them how to buy puts on the Dow. One reader wrote in to say thanks for a **586% return** on one of my recommendations:

"Hello Dan, Thank you for the great advice. I bought my Dow Sept 90 Puts at \$1.40 and sold them for \$9.60. -- a very substantial profit, thanks..."- Ian McFarlane

Another, who quickly made back his investment and is now piling up profits, writes:

"Thanks for getting me to check out those Dec. put options... I sold half at \$780 each and I've gotten all my money back and then some... they've been up to almost \$1,200 and we still have three months to go!" - John T. Ashworth

And still another ***Strategic Investment*** reader says:

"Dan, I ended up making four times my original investment... who's complaining when the profit margin is 300%!" - Mark Mansfield

When should you jump on this? As soon as China starts dumping bonds... that's our signal! I show you exactly how to set all this up in your **FREE** copy of the report. I also show how to do this inside the added protection of what's called an "exchange-traded fund" (ETF). Of course, this is just the beginning. Make no mistake. This is a tectonic shift in the world economy. And it's opening up many more ways to pile up a fortune...

HUGE MONEYMAKER OPPORTUNITY #2: Make 10 Times Your Money on the Resource Explosion of 2004-2005

I'm telling my ***Strategic Investment*** readers to get ready for a 20-year bull market in just about every raw resource they can think of...

Copper... gold... silver... nickel....oil... natural gas... wheat... coffee...

What? Sure Dan, commodities have soared over the last year. But how could this run of profits last for 20 years? Right of you to ask. And ordinarily I'd expect you to think I'd lost my marbles to make predictions that broad and that long-lasting. But first, hear me out.

Just on energy alone, take a look at these China-related numbers:

- In 1993, China became a net oil IMPORTER just like the Unites States.
- More than half of China's 26 provinces are already facing electricity shortages.
- China is now the second largest energy buyer in the world, after the Unites States.
- China will demand 290 millon metric tons of oil by the end of

2004.

- China's oil demand is expected to double by 2010.
- China's electricity demand has already doubled, and it should quadruple by 2020.
- Last year, China drove 35% of global oil demand.

That's just energy.

Consider: During the 1800s, Britain went through a boom. During the 1900s, it was America. Both had huge downturns during those times... but commodity demand exploded for both for the full century.

China's wealth expansion dates back to the first reforms in 1979. But already, they've at least doubled and tripled their needs for lots of raw goods. For instance, just in the last year China's steel imports SKYROCKETED 36 million metric tons (an international record)... its copper imports EXPLODED by 48%... iron ore, platinum, palladium, iridium, alumina...

If it can be chipped, mined, grown, or smelted, China wants it. A lot of it. And that virtually guarantees MASSIVE demand and commodity price hikes all around the world... almost as far as they eye can see...

The Biggest Bull Market In Commodity History

Let's just think about this.

The Chinese already have more refrigerators, more mobile phones,

more TVs, AND more motorcycles than the United States. They need lots of juice to power all that technology. They're just getting started.

In the United States, we burn through 22 million barrels of oil per day. Asia -- with total population 10 times larger than in the US -- still "only" burns through 19 million barrels of oil per day.

What happens when Asia uses as much oil as the United States?

Chinese oil demand is already double what it was seven years ago. So is Japan's. Economist Marc Faber, who lives in Hong Kong, predicts it will double again over the next 10 years. (Marc, by the way contributes to both ***Barron's*** and ***Strategic Investment***.)

Translation: **Without oil and other commodities, the Chinese miracle is over!**

Will oil geopolitics change? They'll have to. Will oil prices go up? Absolutely. Will investors in energy and other commodities get VERY RICH? I'm counting on it.

Here's the way to make money. First, take a look at this next chart...

Despite having a huge amount of land, China has a pathetic amount of minerals... and they've already burned through a lot of their domestic oil supply...

So China is literally a hostage to all the rest of the countries able to feed China fresh supplies of raw material! Own the right commodity-based investments in the right countries and you'll make a huge pile of profits. It's almost that simple.

In the FREE **STRATEGIC PROFIT PROTECTION LIBRARY** I put together for you, there's another report -- "**Make Ten Times Your Money in the Inevitable Resource Explosion of 2004-2005**" -- I urge you to read.

I'll show you all the investments I'm recommending right now to readers of my newsletter, ***Strategic Investment***. I'll also give you a full strategy for as much of the rest of this 20-year bull market in commodities as we can figure out in advance...

The Next New Oil War?

China's imports shot up 40% over the last year.

What happens now that the Chinese can trade gold on the Shanghai exchange?

What happens when U.S. and China oil demands collide?

Already, two of China's largest oil companies just outbid several rivals to take over huge Indonesian gas and oil fields. And Beijing just invested \$9 billion in a natural gas project in Jakarta.

China also imports oil from Iraq, Iran, Saudi Arabia, Sudan, Angola, Nigeria, Russia, Argentina, Bangladesh, Canada, Colombia, Ecuador, Mexico, Venezuela, and even the United States.

On certain energy plays I've got pegged for the **Strategic Investment** portfolio, it is very possible to start making 300% to 400% gains in a very short period of time. And gold...

As I'll show you in "**Make Ten Times Your Money in the Inevitable Commodities Explosion of 2004-2005**", I see gold and the DOW crossing paths. Spot gold could double from current prices. Gold stocks blast off to five and six times their current levels.

And that's just the bigger players. **Junior gold stocks could shoot up 20 times current share prices...** just as soon as the U.S. dollar starts hits freefall.

In your **FREE** e-copy of "**Make Ten Times Your Money in the Inevitable Commodities Explosion of 2004-2005**", I'll show you how. I'll rush you this **FREE** report the moment you let me know you're ready.

A Juggernaut That Can't Be Stopped

What if China gets slammed by another SARS outbreak or some other crisis?

Profits will just keep pouring in!

Because China has to pay for its commodities, regardless. It needs them. She doesn't have them. So whether China likes it or not, its going to have to make a lot of raw resource investors -- even outside of China -- incredibly RICH, as China just keeps on buying

and growing.

Already it's happening. Over the last several years, China has pounced on commodities like a tiger on tenderloin. If China keeps growing annually at 8% and even 9%, demand for raw goods will just keep growing!

So I'm convinced you can make a fortune on this.

All you need to know is how to own the right commodities and the investments tied to those commodities. And that's exactly what you'll find in your **FREE** copy of **"Make Ten Times Your Money in the Inevitable Commodities Explosion of 2004-2005"**.

But first, here's another way you can pile up profits over the next 12 months...
