

The Most Valuable 10 Minutes of Your Life:

**Next Friday, You
Could Make
\$15,800,
Before 10:00 am.**

Dear Reader,

This note from my fellow trader tells the whole story:

"My wife and I were heading to our place in Michigan, and I didn't want to leave with an open position. Risking \$500, I raked in about \$1800 in six minutes. Thank you very much. Take care
-- Tom Ziggaro, New York, New York

Tom Ziggaro - who's also a retired Chicago Options Exchange floor trader - more than tripled his money-at-risk in just six minutes, using a fun, simple, and very profitable trading technique I'm going to show you how to

use in this letter.

Tom's not trading options. And he's not involved in some "work-at-home" scheme, either. He's using this simple trading technique with the most liquid stocks in the market... stocks just like the ones you buy and sell with your broker.

This simple technique I'll show you lets you make money five days a week, in as little as 5 minutes a day... no matter what the market is doing. The best part is, you can use it as often or as little as you like. 1 day a week... 3 days a week... or every day, Monday through Friday. And you'll be finished most days before 10:00am - the rest of the day is yours to do whatever you like.

Risking \$1,000 on each of these would have made you....

- Household International - 10/11/2002 - \$15,800 (56 minutes)
- Expedia - 2/6/2002 - \$14,200 (64 minutes)
- Biogen - 4/11/2002 - \$5,280 (24 minutes)
- United Health Group - 6/14/2002 - \$3,560 (8 minutes)
- RF Micro Devices - 7/1/2002 - \$4,000 (23 minutes)
- Southwest Airlines - 7/26/2002 - \$2,870 (48 minutes)
- Sears - 10/14/2002 - \$5,240 (59 minutes)
- Nextel - 11/11/2002 - \$5,050 (171 minutes)

Better yet, it gives you the opportunity to make a lot of money - very, very quickly - without being glued to your computer all day.

Before I show you exactly how it works, let me show you how

much money you'd have now if you had been trading with this technique in 2002. If you risked \$1,000 in the following recommendations last year, you would have had the opportunity to make very quick profits - like those in the box above.

These eight trades alone would have brought you an extra \$56,000 last year.

Better yet, if you had made *all* the trades we recommended last year, this technique would have allowed you to make \$94,360 in the 2002 calendar

year, risking only \$1,000 on each trade.

That's correct - \$94,360.

Many of the trades last just ten minutes. *And if you're in any trade longer than 10 minutes, it means you're sticking around to make more money.*

On average, our winners make about 3 times more than our losers. And if there is a loser, this technique ensures you're out of them. FAST.

As I'll show you in a moment, this technique has been refined and perfected to efficiently eliminate losers. Not all of them, of course... as in any kind of investing, there will be losers. But like I said, when there is one, you're out fast because my technique is designed to help protect against big losses.

That's why knowing this technique will be the most valuable 10 minutes you spend all day. Think about what you do around your house that takes 10 minutes... take out the trash... take a shower... make yourself a sandwich...

Instead, in those same 10 minutes, you could be making money. In bull markets, you'll make money. Bear markets? You'll forget what one is - using this technique, 18 out the last 19 months have been profitable.

Once you see the kind of profits you can make with this technique... it could certainly put a life of financial freedom well within your reach... you could travel whenever you like... help those you care about... afford whatever "finer" things in life you want... even "retire" from your day job if you wanted to... just by using the technique I'll show you in this letter.

A very simple trading technique

You turn on your computer in the morning... check your e-mail... make a

trade or two... make 2, 3, 4 (or more) times your money... bank your profits... then, minutes later, you're done.

Do whatever you want with the rest of your day. Play golf. Take a nap. Whatever you want.

With this technique, there are never overnight trades or long-term open positions. No guesswork. No complicated formulas. You're in and out of a position in 10 minutes or less. You're trading the most liquid stocks in the market. You get fast and fun trading action, great profits... and best of all, you're not tied to your computer checking quotes all day.

Once you get a taste of the kind of money this enjoyable technique will make you, you might find from now on, this is the only way you'll ever want to trade stocks.

My simple technique - called the **10-Minute Trader** - will make your trading a lot more fun... and far more profitable.

Successful trading teacher, Sunday lay preacher

Before I tell you about this simple technique, I should introduce myself.

My name is D.R. Barton. I started out in business as a chemical engineer for DuPont... I've always had an interest and expertise in "systems-building" - including stock market trading techniques.

In fact, I first began fine-tuning what became the 10-Minute Trader technique back in 1987, in order to create a profitable trading system for myself.

My desire to teach these simple trading secrets - and the success of my trading systems - got me invited to join the International Institute of Trading Mastery (IITM) as a Director. In addition to consulting for a hedge

fund, I've done a lot of writing on successful short-term trading, too - as a co-creator and contributing author for the best-selling book *Financial Freedom Through Electronic Day Trading*, as well as writing articles for *Market Mastery*, the IITM newsletter. I'm also co-authoring a new book called *Safe Strategies for Financial Freedom* that will hit the shelves early next year.

I enjoy spending time with my lovely and talented wife as well as my daughter and son (the apples of my eye!), and because my faith is a very important part of my life, my experience as a lay-preacher - which I enjoy doing at several churches around Wilmington, Delaware - allowed me to become a speaker, educator and developer of seminars for stock and futures traders and investors.

I also find time to teach Sunday school, elementary school gifted math, and church leadership seminars... and when I have time, you'll find me sinking putts (or trying to) on the golf course.

But in the trading and investing world, the work I'm most proud of - and what I'm writing to share with you - is my **10-Minute Trader** technique.

As you'll see in a moment, there isn't a safer, easier or more fun way for you to make money in the market, every weekday, no matter what the market's doing.

Quick, profitable fun

Using my technique couldn't be simpler. It's as easy as opening your e-mail.

First, you'll turn on your computer in the morning, before the market opens, and check your e-mail in-box.

The quick, short, and simple e-mail I'll send you early each morning will

tell you exactly what stock (or stocks) my scan says are ripe for a 10-minute trade. Sometimes there will be one stock... sometimes two... or if the market's looking good, as many as six.

There will also be days when the market simply has nothing to offer us - in that case, I'll tell you that there are no picks, and we'll sit on the sidelines that day. I'll only take the highest quality opportunities and trade when the market is moving in our favor.

In the 10-Minute Trader e-mail you'll receive daily, I'll also give you a brief review of what the previous day's recommendations did. If you had been following my recommendations, here's an e-mail you would have received the morning of June 19, 2003:

As you can see, the 10-Minute trader daily e-mail tells you exactly what

stocks to trade. And at what price to trade them. My crystal-clear instructions will never leave you wondering what to do. I do all the hard work for you. All you have to do is take ten minutes or so every morning, make the trades you want, and make money!

You may be wondering how those 5 trades above did. Here's the e-mail you would have received on **June 20, 2003**:

Don't be confused by the "R" in the above e-mails, either. That's just a shorthand term I use to show reward-to-risk ratio.

In this case, on the **Month-to-Date** line in the first June 19 e-mail, **+8.66R** means that, risking \$1,000, you would have made 866% of your per trade risk amount if you had participated in all 18 trades for the month - which would be, in cash terms, \$8,660 in half the month of June! And that's only risking \$1,000 per trade... but you're free to risk more or less, of course.

And in the next day's e-mail, dated June 20, you'll see that all five recommended trades combined made 2.5 "R" (or times) what you risked.

Here, risking \$1,000 per trade, you would have made \$2,500 in a morning.

Also, let me point out that when there's more than one stock to trade - as is the case with this e-mail - you don't have to trade all five stocks. Obviously, you can if you want to. But with my technique, you can trade one... two... or all five. Each of the stocks that's included in the 10-Minute Trader daily e-mail all give you the same opportunity of making at least twice your initial risk amount.

Trade when it's convenient for you

With my technique, you'll get a daily 10-Minute trade e-mail Monday through Friday. But as I said earlier, while you'll receive your e-mail every day, there won't necessarily be a trading signal every day.

And just because you receive an e-mail, that doesn't mean you have to trade every day. If you want to trade each weekday, you can... or you can trade just one day or two days, if that suits you better.

Maybe you've done really well the first day or two of the week, made a few thousand dollars or more... or maybe you're going on vacation for a few days... or you just have other things you'd like to do with your morning.

You can even take a day, a week, or a month off if you want. Just return to the profitable trades when you're ready to.

With my 10-Minute Trader technique, you can trade as often or as little as you like.

Here's the best part. *The normal time you'll be in and out of a trade is just 10 minutes!* And you'll never hold a trade overnight. No more worrying about whether the price is moving against you while you sleep (or try to).

Rest assured, if you're in a trade for longer than 10 minutes, you're STILL making money (I don't know about you, but I don't mind waiting around an extra 20 minutes or so for double, triple, or quadruple the extra profits!)

After your morning trading is done, all of your positions are closed - leaving you a stress-free day to relax and enjoy.

The "Rubber Band" Morning Pop: How the 10-Minute Trader keeps bringing in the money

As I'll show you in a moment, my technique simply selects the stocks that are primed for a morning "pop."

This technique also keeps every 10-Minute trade you make low-risk... and high reward.

With 10-Minute Trader, you never have to worry about finding the right stocks to trade, or how to figure out when to enter or exit. You'll get everything you need to know in your early-morning e-mail with clear, easy-to-understand instructions.

But you may be interested to know how the 10-Minute Trader screen works - why it successfully tells us to trade the stocks it does.

Simply put, the 10-Minute Trader screen looks for stocks whose price has moved too far in one direction - like an overstretched rubber band - and primed for that "rubber band" to snap back the next morning.

The "snap-back" of this rubber band effect is simply a correction. And stocks like these almost always have a correction. In 15 years of technical analysis, I've found that the most profitable correction we're looking for - the rubber band snapping back - happens within the first few minutes of the stock market opening for the day.

Through technical charting and momentum screens, the 10-Minute Trader screen zeros in on these stocks, based on the strength or weakness of their closing price.

Now, you don't have to worry about doing any of this analysis yourself. I take care of all of that for you. I'm sure, however, that you'll want to see how it's done...

So let me show you several examples...

Behind-the-scenes: The 10-Minute Trader in action...

Expedia (EXPE): In February of last year, this company was a classic example of an extremely overbought stock ripe for a correction. After 9/11, this stock dropped hard (as did the whole travel industry). But then, the price almost tripled in the next 4 1/2 months.

On the daily chart, you can see the fast price run-up from 22 to 28 at the end of January. Then the stock stalls around the \$28 dollar price level. On February 5th, the stock finishes the trading day with extreme weakness, closing on its low.

This is the day that triggered our set-up. The stock was overbought and had started its "snapback" correction. Adding to the case for this recommended trade, the chart showed a classic reversal pattern (called an "Island Reversal Top") where the stock gaps up (as it did on 1/29) forms an "island" of price bars (as it did on 1/29 -- 2/4) and then gaps down (as it did on 2/5).

The stock certainly looked like an overstretched rubber band that was popping back!

On Tuesday night (2/05) our screen was complete... the stock could be sold short on Wednesday morning, if it traded below Tuesday's closing price of \$24.65.

Take a look at how the stock traded the next morning on the 5-minute intra-day chart. EXPE finally traded below the previous day's close 20 minutes into the trading day. From there, it never looked back!

This was a wonderful collapse in price that my 10-Minute Trader screen regularly picks up. Using a trailing stop (this is a great and simple technique I'll show you) to protect profitable positions and to manage risk, the result was spectacular: \$1,000 risked in this trade turned into as much as \$14,200!

You could have been on the golf course by 10:45...

Biogen (BGEN): Biogen had just gone through an intense period of weakness after a big gap down back in March. Leading up to this screening day, BGEN had gone through 11 down days out of the last 12 -- clearly a stock stretched to the oversold side.

On the 10th of April, the perfect 10-Minute trade set-up was complete - the stock had an up day with a strong close in the upper part of the daily range to complete the set-up.

On April 1, Biogen gave us an entry signal when the market opened...
