

A startling revelation from a prostate cancer survivor reveals that...

**Until now modern medicine has been
looking in all the wrong places to reverse
prostate cancer and prevent prostate
problems!**

A special message to all male readers from the creator of the
Underground Cures: Natural Ways to Beat Prostate Disease
program...

'In 1990 I was diagnosed with prostate cancer and I became just
another statistic...'

Dear Reader,

I know how easy it is to ignore your prostate. That is - until the
tests come back positive for prostate cancer. I'm sure I was just
like you when it came to dealing with my potential prostate
problems. I went to my doctor for regular check-ups and thought
that was enough. Only later did I learn that he was waiting for my
swollen prostate to deteriorate to the point where it would have to
be surgically removed. That could have left me both impotent and
incontinent.

When I was told I had prostate cancer - I was also told that the
threat of death meant that either surgery or radiation, or both, had
to be done immediately. Not liking these options, I began intensive
research into self-healing alternatives. And as a non-MD, I was
fortunate not to have been programmed to react like a typical

doctor. In fact, I went about reversing my prostate cancer the total opposite way any typical doctor would, and my program worked! I developed an all-natural treatment for prostate cancer which I successfully used to reverse the condition myself. Today I'm cancer-free and I have helped thousands of men defeat prostate cancer and avoid prostate problems.

And if you follow my simple program - it can work for you. Better yet - it can help you avoid the anguish I went through when my test came back positive.

Sincerely,

Larry Clapp,
Prostate cancer survivor

Dear Reader,

I have some very good news for you. In spite of the fact that...

- Every 15 minutes another man will die from prostate cancer
- Every 3 minutes a case of prostate cancer is diagnosed in the U.S.
- 90% of American men will have some sort of prostate deterioration by the age of 60

...there's an easy-to-follow all-natural prostate program that can reduce your chances of ever hearing 'you've got prostate cancer.'

What is it that Larry Clapp, Ph.D., the author of *Underground Cures: Natural Ways to Beat Prostate Disease*, found that the top minds in men's medicine have missed? Simple. On his way to ridding himself of prostate cancer, Larry discovered that...

Until now, everyone has been looking in the wrong places to reverse prostate cancer and prevent prostate disease!

While nearly the entire medical establishment has been focusing on the prostate itself - Larry discovered that there are other areas of the body that cause damage to the prostate if not taken care of. Weakness in any one of these areas can mean the difference between enjoying great sex or suffering with prostate problems, or even dying from prostate cancer.

For example - do you have silver fillings in your mouth? Then you're a candidate for prostate problems.

Look in your mouth to protect your prostate!

Last time you went to the doctor for a prostate exam - did he examine your mouth? Of course not! But if he knew the latest advances in prostate health - he would have!

We've all heard the potential problems with amalgam (silver) tooth fillings. It's now been discovered that these fillings can contribute to prostate problems.

The mercury in amalgam fillings can leach into your system and wreak havoc with your prostate. Stop the leaching - and you help promote prostate health.

Here's what Harold Ravins, D.D.S., a leader in the biological dentistry field tells us...

'We have not been able to locate a man with prostate problems who also has a clean mouth. If you have no infections in the mouth, you have a much better chance of not developing prostate trouble.'

The health of your mouth is just one factor that can affect your overall health. There's a way to intercept prostate problems before they even occur when you...

Look in your supermarket to protect your prostate!

You may have read elsewhere that the fats we eat are responsible for the high occurrence of prostate problems. But the difference in fat consumption by Americans is not that much greater than people living in other countries. In fact, some cultures actually consume more fat. The real culprit is what's inside the foods we eat. Namely, pesticides, herbicides, antibiotics and growth hormones. Many of these chemicals are banned in other countries.

Specifically, to keep your prostate healthy and happy - next time you visit the supermarket you need to know...

- The foods that attack your prostate: Recent findings show that certain foods are so full of prostate attacking pesticides and chemicals that no matter how many times you wash them - when you eat them - you're inviting pain into your prostate. The report lists every single one of these foods to avoid at all costs.
- Milk does a body bad: A mind-numbing 16 studies have linked prostate cancer to dairy consumption. Milk and cheese are filled with pesticides, herbicides, fungicides, antibiotics, hormones and industrial toxins that wreak havoc on your prostate. A recent Harvard study found that 2 1/2 servings of dairy increase your prostate cancer risk by more than 30%! Maybe it's time to shave that milk mustache off.

But there's good news. Larry has identified and detailed the best foods to eat to ensure your prostate's health! And you'll learn how to safely eat some of the 'banned' foods. (Which is a good thing as some of them are among my favorites.) So, to keep your prostate

running at peak efficiency, you won't have to necessarily give up milk and cheese if you follow the few simple steps which are revealed in the report.

How many men are actually getting sicker because of the prostate protein myth?

If you already have prostate problems, you may have been told to limit your protein intake. Big mistake! Protein is important in promoting prostate health. Among other benefits - it provides prostate-protective zinc. Instead of limiting protein - you need to focus on a few specific optimum sources of protein. Not only does the report tell you where to get premium protein, but it also provides a basic, easy-to-follow guideline for protein intake. No guesswork on your part.

Don't let your doctors play 'Prostate Pinball' with you

Diagnosing and treating prostatitis (a prostate condition most men have) often resembles a game of pinball. With the patient being the ball! Typically, antibiotics are the treatment recommended with or without an indication from tests that it is warranted. In the past, only about 30% of prostatitis patients have achieved results with these medications. Often one antibiotic after another will be tried over a series of months. Chronic patients end up bounding from one urologist to another, hoping to find answers somewhere.

Listen, the best scenario for your prostate is to keep it healthy by doing a few simple things as Larry Clapp outlines in this report. We know you've read about saw palmetto, pygeum, lycopene, and zinc...and all have shown great results in combatting prostate disease. But in this groundbreaking report, you'll learn of an herb that's...

More powerful than saw palmetto

One company has just produced a 'super' product that delivers natural phytosterols, the component that has made saw palmetto well-known. However, this product delivers the phytosterols in a more concentrated form that works four times faster than saw palmetto. In studies, the phytosterol beta-sitosterol has been shown to inhibit the growth of cancer cells and to help maintain a healthy male hormone balance.

'3-in-1' European folk remedy that reduces cancer...lowers prostate inflammation...and eliminates urinary symptoms

Have you heard of Epilobium yet? You will. After a long history of near prostate miracles in Europe, one company is now offering it here in the United States. Epilobium comes from a European plant with a rose-purple flower that attracts hummingbirds. A preliminary study just found that it reduces cancer and prostate inflammation - including that associated with Benign Prostatic Hyperplasia (BPH). This is probably the first prostate problem preventer you want to put on your 'keep your prostate healthy' shopping list.

The lazy man's resource for optimum prostate health and sexual function

Let's say you're a typical man and you don't have a lot of time to alter your diet. The report reveals a supplement which is a combination of the pollen of eight different plants which has been shown to inhibit and reverse enlargement of the prostate. You'll find full details in the report.

But I've only hit the tip of the iceberg in beginning to tell you how this remarkable report can improve your health. Underground Cures:

Natural Ways to Beat Prostate Disease also shows you...

- New 'early-detection' tests that catch prostate problems long before most traditional testing methods do. Before you let your doctor poke your prostate full of holes or shove a tube up your urethra, make sure you know about the latest testing procedures so you can make an educated decision as to how you want to be treated.
- A 10-step personal healing plan. Put all the pieces of the prostate puzzle together with this easy-to-follow step-by-step plan. This is the ultimate prostate health program. And it's surprisingly simple to do.

Protect your prostate and health with a safe, effective, natural, easy-to-follow program

Larry Clapp has discovered that many warning signs of prostate problems appear in other parts of the body long before they reveal themselves in the prostate. Imagine being able to ward off prostate cancer or an enlarged prostate because you know your swollen gland is trying to tell you something. Or if your gums start to bleed - it may be a sign to check your prostate and take a simple precautionary step.

And when you take these the simple precautions revealed in Underground Cures: Natural Ways to Beat Prostate Disease, you'll...

- Increase your body's natural bacteria-fighting immunity
- Decrease your risk of getting an irritated or enlarged prostate - which can lead to prostate cancer
- Supercharge the function of your prostate so it works at peak levels each second of every day and doesn't break down as you age

- Achieve stronger orgasms and have better sex.

By doing a little preventive maintenance on your prostate, by following the simple recommendations and suggestions in Larry Clapp's Underground Cures: Natural Ways to Beat Prostate Disease - you'll be putting yourself into a position where you have a good chance of avoiding serious prostate distress.

I can give you no higher recommendation than the fact that I'm using many of Larry's suggestions myself. Because I certainly don't want to have to deal with any kind of prostate problems - no less prostate cancer. And this program is the simplest, best, and most effective way to keep your prostate healthy for the rest of your life!

Yours in health and pain-free living,

James Demas
HSI Researcher/Writer

P.S. Don't wait until it's too late. Remember...you'll never have to undergo prostate surgery if you prevent prostate problems before they show up. Everything in this program is so easy to do that, quite frankly, I think that any man over the age of 40 who doesn't follow his simple advice is foolish. This information is too important not to know. Order today, for only \$19.95 plus \$3.50 S&H...it can save your life!

P.S.S. If for no other reason, you should maintain a healthy prostate because it lets you have sex! The prostate acts both as a sex gland and sex muscle. It's located just below the bladder and in front of the rectum. When you're young, your prostate is the size of a walnut. In later life, it expands to about the girth of an egg. One of the main jobs of the gland is to produce secretions that later become part of the liquid portion of your semen. Prostatic fluid also fosters

the vitality of sperm. And the muscle capacity of the prostate enables it to help propel your sperm out of the body through the urethra. And a healthy prostate also has immune defenses that guard against bacteria backflow into the bladder. And when the prostate is normal - it allows you to maintain erections, shoot your sperm, pee like a racehorse, and so much more. But problems can arise, particularly as we age.

While we're all aware of prostate cancer - Benign Prostatic Hypertrophy (an enlarged prostate) can be just as damaging. An enlarged prostate can lead to interference with the normal flow of urine out of the body, sexual dysfunction, pelvic pain, and even fever and fatigue. Unfortunately, traditional diagnostics and treatment for prostate problems has been dismal. But it doesn't have to be that way for you. A simple precautionary program allows you to keep your prostate running at peak efficiency.
