Dear Friend,

I have a unique market advantage that you've been ignoring.

We just made **80%** on Canadian Dollar calls, **125%** on Coffee calls and a whopping **304%** on Soybean calls...

Before that, we posted **49%** on Treasury Notes, **77%** on Silver, **82%** on Gold, **85%** on Corn and **99%** on Unleaded Gas.

People ask me how I'm able to make these substantial profits in such a difficult market. So I tell them, "*I don't consider the market difficult at all.*"

Days
76% on T-Note Puts in 38 Days
82% on Gold Calls in 104 Days
48% on the Euro in 10 Days
98% on Silver Calls in 79 Days
402% on Anooraq in only 5 Months

To hear this, especially in today's shaky economy, may sound a little bit pompous. But to be fair, I have a unique advantage...

You see, I run an investment service that focuses solely on natural resources. We recommend things like Sugar,

Coffee, Wheat, Gold, Silver, Canadian Dollars and Soybeans. I confess, they're not the most interesting topics in the world. But I know some people who would say they're interesting... because lately my natural resource investments are making money hand over fist.

In fact, since Jan. 1, 2002, our closed positions have averaged gains of 53.46%. That's winners and losers combined.

Out of 41 total recommendations, 31 were winners. That's an **amazing 75.61% win rate**. And when you run the numbers, it gets even more impressive...

Over the last 17 months, \$1,000 invested in all my recommendations would've **grown into \$20,526.82...**

Imagine if you had invested \$5,000 in my recommendations. That would've **grown into**

## 75.61% of Our Closed Positions Are Winners!

Don't let commodities profits scare you. Despite what Wall Street tells you, it's just as easy to make money in commodities as it is in stocks. In this report, I'll show you how.

My **Resource Trader Alert** uncovers opportunities in the things that keep the world running — oil, natural gas, gold... even wheat, soybeans and currencies. Using options and penny stocks, we deliver the fast profits to your bottom line... Just like one of our members was able to do.

Subscriber Ted F. says that "people tell me I'm crazy for playing the commodity options market, but with John's help, I'm looking forward to growing my account even more and learning the art of options investing." Read on to learn how Ted F. has grown his portfolio and how you can grow your investments too.

**\$102,634.12...**

Or \$10,000 would've **grown into \$205,268.25.**

And I have a hunch some of my members made even more.

What's even more remarkable is that out of those 31 winners, 97% of them posted double-digit gains... and 35.5% posted triple digit gains! In fact just recently, our Soybean play made 304%.

Can this success continue?

Absolutely. And I'll tell you why in a moment. But first,

here's the big question you must ask yourself...

*"Do you want to make these profits with natural resources?"*

Answer yes, and I invite you to read on...

## Major Market Shift Already "In-Play"

Before telling you how to make these high levels of profits in natural resources, I feel I should introduce myself. My name is John Myers,

and I'm an accomplished in natural resources.

By "accomplished," I mean I've been able to help people make a lot of money following my investment advice. Unlike what you may have heard, investing in natural resources is no different from investing in any stock or option. They're just as easy. In fact, executing a natural resources play follows virtually the same procedure. But here's the important difference:

***"Having followed RTA and John's recommendations this past year I now have a healthy respect for what he says and recommends. He is practical and well grounded in his analyses... timely in his alerts, and he appears to have his clients' interest foremost."***

**-- Kenneth M. (subscriber)**

**My natural resource investments are outperforming the best stocks on Wall Street -- and will continue to do so for the next three years.**

In fact, even if the international tensions, insider trading, accounting frauds and all the other scandals on Wall Street get cleaned up, my natural resource investments will still outperform Wall Street's best. In fact, it won't even be close. And the reason is simple...

As you read this, a major market shift has occurred. There's a new bull market, but it's not happening on Wall Street. It's happening in natural resources. For example, the CRB Index of commodity prices, which serves as a broad market indicator of natural resources, is up 30.7% from its 2002 low. Platinum is up 21%. Soybeans are up 35%. Wheat is up 43%. Crude oil is up 54%. Cocoa is up 77%. Others are up even more...

Remember tech stocks in 1999? A similar situation is happening

right now in my natural resource investments. They're all going up... and the gains you can make are remarkable. I can help you, just like I've helped others before you, learn how to make tremendous amounts of money with natural resources. It's not uncommon for us to make gains of **146%, 105%, 122%, 173%, and 99%** all in a two-month period. New members ask me all the time, *"Is it really possible to make so much money with your recommendations?"*

Without hesitation, the answer is "yes."

Just imagine the profits you could make if you didn't have to worry about the extreme volatility on Wall Street. With my **Resource Trader Alert**, the daily ups and downs will never again have such an extreme impact on your profit margins. This is what helped my loyal followers turn \$5,000 in Canadian Dollar calls into **\$9,000...**

And \$5,000 in Soybean calls into **\$20,200...**

And \$5,000 in Coffee calls into **\$11,250...**

And \$5,000 in Corn puts into **\$9,250...**

And \$5,000 in Unleaded Gas into **\$9,950...**

Or even \$5,000 in Sugar into **\$11,000...**

Right there, you have a series of six plays, \$5,000 each, that netted \$40,650. And remember, that's just a snapshot of some recent gains. I've got 25 more winners over the last 17 months.

Isn't it time you took your share of these profits?

If you're in your 40s... 50s... 60s... or even 70s, and you're tired of relying on the mood of the market for big profits, rest assured there is a simple solution. My **Resource Trader Alert** is here to help you make upwards of 60%... 150%... even 300% on your investments despite the volatility of today's stock market.

Nowhere else can you safely and routinely make double, triple and even six times your money in a matter of months. But in order to make these gains, you have to change your way of thinking about the markets, starting with step #1...

## **The Dow Is Washed Up... The NASDAQ Is Yesterday's News...**

I confess, I get some strange looks when I tell people natural resource investments will outperform the top-performing stocks on Wall Street over the next three years. But after hearing this one simple fact, you'll understand why.

***"The information and instruction is always easy to follow... for the first time after having tried so many newsletters I have actually made money."***

**-- Jan F. (subscriber)**

Get this...

Of the 9,134 stocks trading on the NASDAQ, the top-performing stock of 2002 was Amazon.com. It gained 87% for the year.

At first, you'll probably say, " *87% gains on the year... not bad.*"

But compared to the gains of my **Resource Trader Alert**, that's

peanuts. You see, over the last 17 months, my closed positions topped 87% gains 20 different times! Our gains of **146%, 105%, 122%, 173%, 125%, 153%, 199%, 94%, 98%, 159%, 304%, 122%, 120%, 99%, 174%, 160%, 187%, 104%, 111%** and **158%** all beat the very best-performing stock on Wall Street in 2002.

You must admit, that's awfully impressive...

With gains like that, you can grow your portfolio very quickly. What's more, the advice you'll receive is clear, simple to understand and based on a profit system that's withstood the test of time. It just might be the simplest system you've ever used.

### **For the Concerned Investor: I Say Beware of This Volatile Stock Market**

Summarizing the market action of 2002 is quite simple: Stocks got clobbered. The dollar got clobbered. But commodities soared. Which side would you rather be on?

With ***Resource Trader Alert***, you can capitalize on this new bull market in commodities by profiting off gold stocks, silver stocks and commodities options... which offer you gains of **104%, 120%, 125%** and **304%**... far ahead of anything you would have seen with the Dow or NASDAQ. You can expect gains like this for one simple reason:

My profit strategy doesn't depend on the stock market.

I don't pretend to know how much the stock market will rise or fall tomorrow ...next month... or next year. My strategy is to buy into unrecognized situations, or to seek out newly discovered, overlooked or misunderstood underground investments that represent both extraordinary and unrealized potential for profits.

This strategy has made us **209%** on Heating Oil, **28%** profits on Gold, **92%** on Corn, **146%** on ASA Limited, **159%** on Soybeans, **160%** on Swiss Francs, **187%** on Francisco Gold, **122%** profits on Canadian Dollars and **174%** on Wheat.

But in order to make these gains, you'll need to commit to learning about natural resource investing... and that's where I can help. I sincerely hope you don't miss the opportunity to profit off the 'New Bull Market' in natural resources.

## 20 Times More Profitable Than Wall Street

Let me show you how simple my system is, and how quickly you can expect to grow your money using a series of my recent recommendations. We'll start out with an initial investment of \$5,000 and our play on November Soybean Calls...

### **TRADE #1: 304% Gains...** **Bought 8/30/02 & Sold 9/11/02**

Last summer, much was made of the nationwide drought. To me, news of droughts are like earnings reports or Fed meetings. Play them correctly, and you can make a bundle of money in a short amount of time. That's exactly what happened with our November Soybean Calls.

Being around the commodities market all my life, I knew a serious lack of rain would cause the soybean crop to struggle, and that would lower supply, driving prices aggressively higher. So in the very beginning stages of the drought, I recommended **November Soybean Calls** for \$325 each. Not long after our recommendation,

the weather report continued to be as dry as the desert sky. No rain was forecasted in weeks... and soybean traders started to panic. *"Better buy now,"* they thought *"than buy in two weeks when the prices are even higher."*

This mad rush for soybeans drove our call premiums aggressively higher, giving us a profit of 304% in just two weeks. In 23 days, your initial \$5,000 investment had grown into \$20,200.

### **TRADE #2: 80% Gains...** **Bought 10/28/02 & Sold 1/24/03**

It was late October when I discovered a major discrepancy between Canada's economy and their currency valuations. Although the U.S. economy was hitting hard times, Canada's economy ranked as the strongest among the seven major industrialized nations. A closer look showed that consumer confidence in Canada was close to a 14-year high!

Despite these fantastic economic readings, Canadian dollars were grossly underperforming other currencies. In fact, the Canadian dollar had even underperformed the Japanese yen! Given Canada's strong economy, the disparity didn't add up. I predicted a price rerating coming soon, so I immediately issued a buy recommendation on **March 2003 Canadian Dollar Calls**. Each position cost a total of \$510.

Shortly after this recommendation, things started to move our way. First, gold began to rise. As I quickly pointed out to my members, Canadian dollars act as one of the world's foremost "resource currencies." This meant that gold's hot streak was great news

because Canadian currency tends to rally whenever gold rallies. Shaken by a volatile market, investors started pulling out of stocks and piling into gold... and our Canadian Dollar March 2003 calls quickly shot up to \$920... good for an 80% gain! Your initial \$5,000 investment, which grew into \$20,200 after our Soybeans play, is now worth \$36,360.

As great as those profits were, the streak continued a month later...

### **TRADE #3: 199% Gains...** **Bought 2/25/03 & Sold 3/18/03**

There have been just three times in the past 14 years when the price of heating oil futures has exceeded \$1.05 per gallon. In all three cases, the prices quickly dropped back down...

- In December 1989, prices soared to \$1.10 per gallon. By April of the following year, they were just above 50 cents a gallon.
- In October 1990, driven higher by Iraq's invasion of Kuwait, heating oil prices topped out at \$1.09 per gallon. By April 1991, they had fallen to 53 cents per gallon.
- In October 2000, prices soared to \$1.11 per gallon. March of the following year saw them close at 70 cents per gallon.

Using this price history as a leading indicator, I quickly positioned **Resource Trader Alert** members to profit off the coming price correction when high crude prices pushed heating oil up to \$1.15 a gallon.

I initiated what's called a "**Bear Put Spread**" in heating oil. Although it may sound confusing, I gave precise instructions on how to execute the recommendation, explaining to my readers that this

position allowed them to make high returns while limiting their risk to a fraction of their initial investment. The total cost of the "Bear Put Spread" was \$323.

But as it turned out, this element of safety wasn't even necessary. Soon after entering into this position, heating oil started pulling back... and pulling back... and pulling back. This pushed our spread up to \$966... almost 3 times our original cost!

Your original investment of \$5,000, which grew into \$36,360 after our Soybeans and Canadian Dollar plays, has now ballooned into a whopping \$108,716.40.

**That's three recommendations... 121 days... a total of just \$5,000 invested... and a total of \$108,716.40 in your wallet**

Incredible is hardly the word. Sometimes, I'm asked how I was able to become so successful in such a difficult game. After all, most "gurus" don't have the slightest clue how to make these types of returns. I tell them I learned from the best...

## **The Son of the "*Original Gold Bug*"**

My father, C.V. Myers, is widely known as one of the top natural resource experts in the country. Educated as a geologist, he founded *Oil Week Magazine* in the 1950s and *Myers Finance & Energy* in the 1960s.

***"I really like John Myers... I think he is honest, down to earth, and I respect his judgment and knowledge. I think he's tops!"***

***-- J. Williams (subscriber)***

It was in this publication where he made his legendary

recommendation to buy gold bullion at \$35 an ounce. One year later, gold bullion was \$100 an ounce. By 1974, gold reached \$180 an ounce -- more than a fivefold increase -- but still Dad said to hang on. In fact, he rode it all the way up to nearly \$700 an ounce. Readers who followed his advice made millions.

This recommendation earned him the nickname "*The Original Gold Bug*," and a moneymaking legend was quickly born. Over the next half century my father continued to make billions for thousands of people to whom he offered his recommendations and taught his secrets.

What does all this have to do with me? And how can it help you get rich?

Let me explain...

Some 30 years ago, when we lived on a farm in Western Canada, my father took me under his wing to learn his craft. Starting at age 14, I watched and listened and soaked in everything I could. I remember growing up listening to the closing livestock prices on the radio... not the latest Beatles song.

Early on, I mostly just marveled at his genius. "*Is it really this easy to make this much money?*" I remember wondering...

As I approached 20, I worked more closely with my father, absorbing all the wealth of his decades of vast knowledge. Slowly, I began offering my own opinions and getting his feedback. Soon I had created my own unique system built on the foundation of the knowledge he provided. As I grew older, I developed my own secrets and techniques to match his phenomenal success in picking

hugely profitable natural resource plays... time and time again.

Through it all, the one thing I clearly remember him telling me was, *"When you encounter a struggling stock market, natural resources is the best way to get rich, very quickly. No question about it."*

Witnessing the last few years on Wall Street, I couldn't believe him more. After all, where else can you routinely double and triple your money in a matter of weeks... sometimes days? Where else is it possible to earn double, triple -- even six times -- your money in a month or two? We do it routinely.

In fact, of the 41 recommendations we made since the beginning of 2002...

- **22 plays gave our subscribers the opportunity to earn 50% profits or better**
- **11 plays gave our subscribers an opportunity to earn 100% profits or better**
- **5 trades gave our subscribers an opportunity to earn 150% profits or better.**

It's rare to make these kinds of fast profits by trading stocks alone. But with natural resources, you can. Quite routinely, in fact. Three trades we made in Coffee, Sugar and T-Notes are good examples...

## **Three Plays... 145 Days... 321% in Total Profits**

Sometimes, all it takes to double your money in natural

**Need a Broker? We Can**

resources is having an understanding of supply vs. demand. Our Coffee play is a good example...

Since coffee ranks as the second-largest traded commodity in the world, its price acts as a reliable gauge of the market. So, I've followed coffee very closely for over 15 years. In August 2002, it was quite apparent to me that coffee was in for a quick jump, which meant a super-fast profit opportunity for my members. Here's the backdrop...

### Help Find You a Good One!

If you don't have a broker who's familiar with natural resources, we can help you get connected with one who does. We know brokers who have been trading exchange-listed commodity options for almost as long as they've existed. They're familiar with my **Resource Trader Alert**... and have been the brokers to clients on many of our past recommendations. If you'd like, we can give you their information once you join up, and they'll be happy to help you.

In the summer of 2002, a 50-million-bag coffee harvest in Brazil left the market glutted with coffee beans. That massive harvest was 47% more than 2001's crop. Not surprisingly, coffee prices had collapsed. My commodities tracker confirmed that the price of coffee on the Coffee, Sugar and Cocoa Exchange (CSCE) was hitting 25-year lows.

To most commodities experts, this simply meant to avoid coffee. But to me, it meant a prime profit opportunity. Being around commodities for the better part of my life, I knew it cost South American farmers an average of 80 cents per pound to produce coffee. Current coffee prices were below 50 cents. The 30-cent price differential meant coffee plantation owners could no longer afford to hire workers to care for their crops, which signaled that

future coffee production would suffer. Prices were simply too low to maintain a productive infrastructure, and that could set the stage for smaller harvests... and much higher prices ahead.

But this wasn't just a hunch...

The last time Brazil produced a coffee crop over 40 million bags was the growing season of 1987-1988. The very next year, the harvest yielded a crop of 22.9 million bags -- a drop of 43%. As a result, coffee prices took off, skyrocketing from a low of 99 cents per pound in July 1987 to a high of \$1.66 in January 1989. Using coffee's price history as a measure, I recommended buying **May 2003 Coffee Calls** for a total of \$937.50.

Boy, did it pay off...

Just 18 days after my recommendation, plantation owners started to cut their work force. Coffee production started to fall. Word got out... and everyone piled into coffee, pushing our May 2003 calls up to \$2,109... good for a quick 125% gain.

Our **May 2003 Sugar** recommendation was just as profitable...

I don't typically rely on sugar for quick gains. But when my commodities tracker uncovered the potential for a price jump, I didn't hesitate. I recommended paying a total of \$606 for May 2003 calls. Three months later, the price of sugar jumped just as predicted, and our May calls traded for \$1,332.80. So those who got in had the opportunity to take profits off the table, all 120% of them, for yet another fantastic profit.

Not to be outdone, our play on **T-Note March 107 Puts** capitalized

on a steep bond-market sell-off to quickly make 76% gains over 37 days. Right there, that's three more recommendations... 145 days... and a total of 321% profits. But the winners don't stop there. In addition to all these, I've also helped my **Resource Trader Alert** members make...

- **49%** Gains on Treasury Notes in three weeks...
- **77%** on Alcoa in 7 days...
- **402%** on Anooraq in 5 months...
- **76%** Gains on Silver in two months...
- **26%** on 3M in just one day...
- **116%** on the Dow in 10 days...
- **48%** Gains on El Paso in less than two months...
- **99%** Gains on Unleaded Gas in five weeks...
- **185%** on Nevsun in 9 months...
- **145%** on Swiss Francs in four weeks...
- **146%** Gains on ASA Limited in 10 weeks...
- **153%** Gains on the Midas Metal in six months...
- **174%** Gains on Wheat in two months...

Again, these are the profits I consider "runs." Whenever I make a recommendation, I'm shooting for 50% gains. Oftentimes, we get gains of 75%...100%...or even 150%. But there are also times when we make smaller gains of 18%... 24%... or 37%. My point is, I'd rather make consistent gains, no matter if they're big profits or small profits.

## **And Our Members Are Enjoying the Winners!**

***Special Interview -- Defeating the Bear Market:***

**Resource Trader Alert *Subscriber Ted F. (RTA member since June 2002) reveals how he's used our recommendations to defeat the Bear Market... and make tremendous gains along the way...***

**Q: Please rate your overall satisfaction with *Resource Trader Alert*.**

**A:** I rate my overall satisfaction good to outstanding. November 1, 2001 I lost my job and a day later got a margin call of around \$1,300. I deposited \$4,000 and tried to better manage my account, unsuccessfully, however. When I started my subscription with ***Resource Trader Alert*** in June 2002, I bought only one option at a time and have built my account to \$12,300 using your recommendations. My opinion is you learn by doing and I believe I am learning a lot by analyzing ***Resource Trader Alert's*** recommendations and comparing them with my charts and other resource material.

**Q: What do you like about *Resource Trader Alert* and John Myers?**

**A:** I used to read John's dad's newsletter. I was looking for a service to help me understand resource option investing and believe I have found it. I read and studied for years but never had the confidence to pick the contracts and place the trades. Being able to triple my account in less than a year really excites me as to what the future has in store.

**Q: We recently posted two sets of profits on the same day... the Canadian dollar (173%) and the Yen (159%). Where you**

### able to profit from these plays? If so, how much?

**A:** I bought the Canadian Dollar for \$700 and sold them for \$1,835 each. I also bought the Japanese Yen calls for \$250, held them awhile longer, and just sold them for \$750. It is always more fun when the account is growing, and since subscribing to **Resource Trader Alert** I've watched my account grow significantly. I love it when people tell me I'm crazy for playing the commodity options market, but with John's help, I'm looking forward to growing my account even more and learning the art of options investing. Because of all the bloody noses I have given myself trying to learn how to trade, I take nothing for granted and appreciate your insight and recommendations. This is the only time I have been able to watch my account grow consistently.

Thank you very much for your time. Hopefully your comments and level of success will convince others to let John help them... just as he's helped you! Right now, we are accepting a certain number of new subscribers to fill our vacant positions. To reserve your spot and get all of John's future recommendations, you can sign up for **Resource Trader Alert** by clicking on the 'Subscribe Now' button at the end of this letter.

## A History of Limiting Risk... and Maximizing Profits

I wish you had been in on the Canadian Dollar play. The Soybean play too. And the Coffee win, the Treasury Notes winner and the Sugar play. In a moment, I'll tell you how you can start getting my **Resource Trader Alert** service -- and begin profiting from what must be the most successful and profitable natural resource system

going today.

But first, I want to tell you something. Because I know what you may have heard.

Natural resource options are risky...

Most people who invest in them end up losing...

Actually, that's quite true, simply because the majority of people who try natural resource investing don't understand the techniques for consistently winning.

So they lose. Time and time again...

But I've learned from the best in the business that if you understand how to track, monitor and identify the telltale signs of a pending movement in a given commodity well before it happens... and if you understand the pulse of the market and know how minor movements will affect their given price -- you'll win. And win big!

That's exactly what you get with my ***Resource Trader Alert***. As a member, you get access to the real-time signals generated from my system. Not only does it predict the historical peaks and valleys of any given commodity using advanced technical analysis, but it also accurately measures the mood of investors, using past price history as a gauge, to predict which way the market's likely to move.

This time-tested formula, combined with sound judgment and many, many years of real market experience, has allowed me to consistently uncover the kind of opportunities I've told you about so far... opportunities that can take a very small amount of money and

grow it into a substantial windfall very quickly -- just like our member, Ted, has had the opportunity to do...

*[read on](#)*
