

Starting With \$200 in January, You Could Have Been Sitting on \$6.6 Million by Dec. 31, Thanks To...

Wall Street's Most Profitable Stock Strings

*Inside: Exclusive details about seven stocks set to rise 32 times over or more in 2005. I'm so sure of it I'll pay you **DOUBLE YOUR MONEY** if I'm wrong!*

Dear Reader,

In the next three minutes, I want to show you how you could have turned **\$200 into \$6.6 million in one year.**

Sound impossible? It's not!

Last year, one of Wall Street's most profitable stock strings could have turned \$200 into \$6.6 million. I'll show you how in a second.

I'll also show you what seven stocks you need to own right now to start your own profit chain (potentially worth millions!) in 2005.

I'm so sure that these stocks will make you thousands, if not millions, in profits, I'm willing to give you the **first six months of my service absolutely**

FREE! That will give you plenty of time to let these profitable stock strings work for you.

In 2004 You Could Have Made...

33.9% Profits → in January
 694.1% → in February
 138.5% → in March
 49.5% → in April
 89.4% → in May
 100% → in June.

And That Was Just HALF the Year. From July to December, you could have raked in another 21.9%, 179.3%, 174.5%, 170.7%, 105.8% and 346%.

Plus, I'm willing to refund you TWICE YOUR MONEY BACK if you don't make a profit following my advice.
 Does that sound like a fair deal?

No one else can make a promise like that. No one. That's how sure I am that you can make money following my recommendations.

But before you read on, let me warn you...

Only a few people will have the insight, intelligence and know-how to **make the huge gains I am going to show you** in this report. That's because in order to beat the market and make spectacular gains, you have to invest in the highest-yielding, fastest-growing and most-ignored stocks in the world.

I'm talking about the stocks that are left out of your nightly news

reports...that are never featured in *The Wall Street Journal* or *Investor's Business Daily*...and that your broker would rather die than tell you about (since he wants them for his own portfolio!).

These stocks are where the huge profits are made month in and month out. They are the same stocks that...

Pummeled the S&P 500 by 200% in 2000, 17% in 2001, 3% in 2002, 90% in 2003 and 77% in 2004.

- Gave my readers gains of 146% in less than two months, 221% in eighteen months, 233% in 50 days, 75.8% in 21 days and 62% in six months.
- Helped the finest fund manager of all time quadruple his money in only four years. (Today, he is a retired billionaire living out his days in the sunny Bahamas!
- Formed one of Wall Street's most profitable stock chains ever and turned \$200 into \$6.6 million in 2004.
- *USA TODAY*, Yahoo! Finance, TheStreet.com, Forbes.com and well-known money managers are touting them as the best investment opportunities on the market right now.

In fact...

TheStreet.com reported on Nov. 1, 2004, that 'Large-cap stocks make the headlines, but lately [small-cap] stocks have been making investors money.'

Mary Lisanti, of AH Lisanti Capital Growth said these stocks 'will rule the world for a while. I don't see anything to change that.'

And if you are willing to invest in them now, you could make a fortune - as much as \$6.6 million - just like you could have done last year.

The key is to recognize these stocks before anyone else does - and to string the gains together over several months - even a year - at a time. And it's not that difficult to do.

In fact, if you'll give me three minutes, I'll show you how one of Wall Street's most profitable stock strings could have made \$6.6 million in 2004...starting with just \$200.

And the great thing was you could have done it with only 12 investments! Here's how...

Profit Chain Step 1:

**Invest in an Undiscovered Research Company
That Beat the S&P 500 15 Times Over in January**

On Jan. 2, 2004, shares of Jupitermedia Corp. (JUPM:NASDAQ)
- a leading provider of information and research for IT companies
- were trading for \$4.75 a share. They were dirt cheap and poised to rise. You see...

Sales were up 75.61% from the year before. Earnings were up 11-fold from 2003. Its net profit margin was 11 times higher than the industry average (meaning it kept 11 times more money than

its competition!). It had no debt to speak of. And the company was getting ready to announce earnings in a month.

In short, this unheard-of company was a solid business - the kind that can make educated individuals like you a lot of money (but you NEVER hear about on TV or in the newspapers!). And that's exactly what happened.

Between Jan. 2 and Jan. 30, shares rose from \$4.75 to \$6.36 - good enough to pound the S&P 500 15-fold in the same time frame. And it was the first step to turning \$200 into \$6.6 million.

If you invested \$200 on Jan. 2, you were sitting on \$267.80 by Feb.1. That's a 33.9% rise in ONE month.

As impressive as 33.9% in one month is, it is not going to turn \$200 into \$6.6 million, is it?

Well, no...of course, not. It was only Step 1 in our profit chain.

Step 2 was to take that \$267 and invest it in February's soaring stock. Anyone who did that would have been well on his way to a fortune. Check it out for yourself...

Profit Chain Step 2:

694.1% Profits in February

2004 was a great year for natural resources - things like metals, oil and even paper. With a major building boom in China and a robust housing market in the United States, demand for materials like aluminum, steel, copper and even cardboard rose

as much as 67%.

That's exactly why a little company called Industrial Services of America (IDSA:NASDAQ) was busting at the seams in February. You see...

IDSA recycles iron, steel, copper, aluminum, brass and cardboard. It customizes waste management and recycling programs for companies in the United States, Mexico, Canada and even Puerto Rico. And with demand sky high for building metals, its business flourished.

Sales and earnings were up 24.84% and 200% respectively. Debt was low. And the stock was cheap at only \$4.44 a share on Feb. 2, 2004. But not for long...

By the end of February, shares of IDSA were flying high at \$35.27. Remember, they were at \$4.44 only days before! That's a 694.1% rise in one month. Anyone who invested the \$267 from January's pick - keeping the profit chain alive - would have been sitting on \$2,126.60.

That means...

In 60 days **you could have multiplied your money over tenfold** by investing in just TWO of the fastest growing stocks on Wall Street - the ones you NEVER hear about in the mainstream media.

But turning \$200 into \$2,000 is nothing. Check out what happened in March - Step 3 in your quest to turn \$200 into \$6.6 million...and Step 3 in Wall Street's most profitable stock chain.

Profit Chain Step 3:

Turning \$200 Into \$6.6 Million: "Man-Made Lightning"
Sends One Undiscovered Stock up 138.5% in March

With the war on terror being fought in Iraq and Afghanistan, the Department of Defense and the U.S. government pledged **\$1 BILLION** to develop 'man-made lightning' - state-of-the-art laser-guided weapons that humanely disable terrorists.

Here's the deal...

Small nodes, no bigger than a human fist, are placed on cars, buildings, shipping containers, energy plants - anywhere a terrorist might hide. Once a bad guy is detected, these nodes shoot out high-voltage bolts of electricity, aka 'lightning,' to disable their targets - humans and vehicles alike!

And unlike traditional weapons, these lasers do not kill their targets. They simply disable them for an easy capture or arrest.

This technology is transforming the defense industry and the way we fight crime. That's exactly why it is expected to be a \$12.7 billion industry in 10 years. And it's also why the U.S. government gave one tiny, undiscovered company 'sole vendor status' to develop and test these weapons.

That company is Ionatron, Inc. (IOTN:NASDAQ). And on March 1, 2004, shares of IOTN were trading for \$2.05 a pop. But by the end of March, they were selling for \$4.89 - a 138.5% rise in a single month.

Had you invested that \$2,126.60 from February and maintained your profit chain, you would have been sitting on \$5,072 by the end of March. And that's after investing in just three undiscovered stocks.

Think about that for a second...

In 90 Days You Could Have Turned \$200 Into Over \$5,000!

Starting with ONLY \$200, you could have invested in Jupitermedia, Industrial Services of America and Ionatron in three successive months and been sitting on over \$5,000!

Talk about a profit chain! And all you had to do was...

- Recognize the ignored stocks set to soar and...
- Take your gains from the previous month and reinvest them in the next highflying stock.

That's it!

Well, actually there was another step. When you finally decided to end the profit string, you had to collect your big check and deposit it into your savings account.

If you chose to end the profit string after investing in only the three stocks I just showed you, you could have turned \$200 into \$5,072. Not too shabby.

But in a second, **I'll show how anyone with a steel stomach could have turned that \$5,000 into over \$6.6 million by the**

end of the year .

Sounds crazy, doesn't it?

I know. But the only reason it sounds crazy is because you never hear about these stocks in the mainstream press. NEVER. So you are not used to these **amazing profits** . Think about it...

If you knew about these stocks, your broker would lose his business. You wouldn't want to buy shares of GE, IBM and eBay from him. You'd close your account and make your own fortune - without all the pesky fees.

No broker wants that. If everyone knew about these stocks, Wall Street could crumble. And I don't expect that to happen anytime soon. You see, most people don't have the guts to invest in these stocks. Since they don't know much about them, they ignore 'em. And it's too bad...

The Daily Reckoning  **Rude Awakening.**
Hot Wallies in the face of Wall Street

SOURPUSS OR STOCK MARKET GENIUS?

When Bill Bonner and **The Daily Reckoning** Team, authors of the *NY Times* # 1 Business Bestseller - *Financial Reckoning Day*, predicted the dot.com collapse, *Money* magazine called Bill a sourpuss, but *Worth* magazine says he's a genius. **The Daily Reckoning** said the "New Era" was a fraud as early as the autumn of '99, when almost everyone thought it was for real. Six months later, the New Era was history.

We'd like to offer you **The Daily Reckoning**, an irreverent mix of contrarian commentary and as one reader points out "...monetary sense in a world gone fiscally mad..." You can begin your FREE subscription to our twice daily e-letters, **The Daily Reckoning** and **Rude Awakening**, by entering your e-mail address below and clicking "Subscribe."

You won't find more profitable and thought provoking writing anywhere on the Internet.

The best investors of all time have built their fortunes buying these very kinds of stocks. In fact, the most successful money manager of the 20th century got his start by investing in stocks just like Jupitermedia, Industrial Services of America and Ionatron. And he quadrupled his money in four years!

I'll tell you all about his story - and how you can make similar gains in this market.

But first, let me ask you a question...

Are you beginning to see **how \$200 could transform into \$6.6 million** if you invested in the right stocks...and strung those gains out over several months?

Thousand of Undiscovered Companies Waiting for You Right Now

There are thousands of undiscovered companies that trade on the NYSE, Nasdaq and Amex every day. Many of them have growing sales and earnings, low debt, lots of cash and incredible products. And those are the companies that make investors rich every month.

They are companies like Jupitermedia, Industrial Services of America and Ionatron - three stocks that could have turned \$200 into over \$5,000 in only three months!

And folks, these high-rising stocks aren't rare. They are very common, in fact. In the last year alone, shares of...

- Travelzoo, Inc. (TZOO:NASDAQ) rose 520%
- Parlux Fragrances (PARL:NASDAQ) rose 248%
- Titan Intl., Inc. (TWI:NYSE) rose 251%
- Napco Security Systems (NSSC:NASDAQ) rose 314%
- Metropolitan Health Networks, Inc. (MDF:AMEX) rose 316%
- Hurco Companies, Inc. (HURC:NASDAQ) rose 191%
- Oregon Steel Mills, Inc. (OS:NYSE) rose 324%
- Smith Micro Software, Inc. (SMSI:NASDAQ) rose 223%.

And there are many, many stocks like these (including the nine stocks I'll show you in a minute) that could have turned your \$5,000 into \$6.6 million!. But before I get to those, I want you to know...

You could have made a LOT more than \$6.6 million last year. You see, there are FAR more high-rising stocks than the ones I am showing you in this report. But it would take hours for me to list all of them. And by now, I think you get the point. Any investor with the knowledge, insight and fortitude to invest in these stocks could make a fortune.

And that is exactly why I am willing to offer you the best deal I've ever offered.

If you give my service a try today and don't agree that these are the best stocks on the market, I'll pay you DOUBLE what it costs to join. All you have to do is prove to me that you followed my advice and lost out. Then, I'll send you a check for twice what you sent in.

Sounds like a fair bet, doesn't it?

If you're willing, I can show you how the best investors of all time made a lot of money. And get you on the road to joining them...completely risk free.

From \$200 to \$6.6 Million in 12 Months

For instance, using a hypothetical example, I just showed you how you could have turned \$200 into \$5,072 - in only three steps on the profit chain.

Let's take that example to its logical extreme. Pretend you would have kept the profit chain going all year long. I'll show you how you could have turned that \$5,000 into \$6.6 million by the end of the year with only nine more stocks.

If you had invested in one highflying stock a month - taken your profits and invested in the next highflier - just like I showed you with Jupitermedia, Industrial Services of America and Ionatron - in just 12 months, you could have turned \$200 into \$6.6 million. Check it out...

Following Wall Street's Most Profitable Stock Chain, You Could Have Turned \$200 Into \$6.6 Million in 12 Months				
<u>Starting Balance</u>	<u>Month</u>	<u>Company</u>	<u>Return</u>	<u>Your \$200 Is Now Worth...</u>

\$200	January	Jupitermedia Corp. (JUPM)	33.9%	\$267.80
	Febraury	Industrial Services of America (IDSA)	694.1%	\$2,126.60
	March	Ionatron, Inc. (IOTN)	138.5%	\$5,071.94
	April	Aldila, Inc. (ALDA)	49.5%	\$7,582.55
	May	Hansen Natural Corp. (HANS)	89.4%	\$14,361.35
	June	W.R. Grace & Co. (GRA)	100%	\$28,722.70
	July	ATP Oil & Gas Corp. (ATPG)	21.9%	\$35,012.97
	August	Excel Maritime Carriers (EXM)	179.3%	\$97,791.23
	September	Conolog Corp. (CNLG)	174.5%	\$268,436.91
	October	Isonics Corp. (ISON)	170.7%	\$726,658.72
		Medicore,		

	November	Inc. (MDKI)	105.8%	\$1,495,463.65
	December	PHAZAR Corp. (ANTP)	346%	\$6,669,767.88

Starting in January and ending in December, it was possible to turn \$200 into over \$6.6 million by investing in the right stocks, cashing out and reinvesting your winnings in the next stock on the profit chain! Of course, you couldn't have done it investing in General Electric, IBM, Intel, Cisco or any other large stock your broker tried to push off on you.

You had to have the proper guidance and intelligence to put your money where no one else was...

Those who did could have walked away millionaires in a year. And if you stay with me, **I'll show you what seven stocks you need to own now to start your own stunning profit chain of winning stock picks.**

Remember, you only need \$200 to get started. That's what my service is ALL ABOUT!

These Stocks Beat the Pants off of Large-Cap Stocks Year in and Year Out

The best performing stocks on the market are companies with tons of cash...groundbreaking products...and growing businesses - the same stocks that have proven to be the BEST investments over the last century.

The one thing that makes these stocks different is...they're still small enough to make them affordable for small investors to make a grab for our share of the profits!

Since 1926, no other class of stock has made investors more money than these small-cap stocks. Let me repeat that...

Over the last 75 years, NO group of stock has made investors more money than small caps. Not mid caps, not large caps, not gold stocks and not retail stocks.

In fact, a famous study done in 1996 by Ibbotson Associates - a major research firm based in Chicago - proved this once and for all.

After compiling cold, hard data on small- and large-cap stock returns from 1926-1996, Ibbotson Associates proved that small-cap stocks outperform their large-cap peers...

- 56% of the time in any given 1 year period
- 66.1% of the time if you hold for 10 years
- 94.2% of the time if you hold for 20 years
- 100% of the time if you are willing to hold for 33 years or more!

In other words, investors who buy shares of the smallest companies on the market beat those who buy stock in companies like Microsoft, GE, IBM, Intel and Cisco. And let's face it, every neighbor, friend and family member you have invests in the same large stocks as the rest of the world. That's exactly why everyone generates the same returns year in and year out.

It's ridiculous!

But what investors don't realize is...

- There are three times more small-cap stocks than large caps on Wall Street right now. That means you have three times as many opportunities to make huge gains every month - like the 146%, 233% and 221% gains my readers made following my advice.
- The longer you are willing to hold solid small-cap stocks, the more money you can make.

Check it out...

\$1,000 Turned Into \$3.96 Million

Anyone who invested \$1,000 in a basket of small-cap stocks in 1926 could have cashed out for \$3.96 million by 2000. By comparison, a \$1,000 investment in a basket of large-cap stocks in 1926 grew to only \$1.76 million by 2000.

Translation...

Over time, people who buy and hold small-cap stocks give themselves the chance to walk away MUCH richer than those who follow the Wall Street herd and invest in the same-old large-cap stocks.

I'm talking \$2.2 million richer!

In fact, the most famous money manager of all time (now a

retired billionaire living out his days in the sunny Bahamas!) made his first fortune following the same advice I am sharing with you now.

Here's How He Turned \$10,000 Into \$40,000 in 4 Years

John Templeton is the most successful money manager of the 20th century - and probably of all time. In 1954 he founded his flagship Templeton Growth Income Fund - one of the highest-yielding funds of the modern era. Every \$100,000 invested into John's fund was worth \$55 million by 1999. That's an annual rate of return of 12.2%.

To put that in perspective for you...

If you put \$100,000 in Microsoft in 1986 - arguably the best single investment opportunity of the last 100 years - you would be sitting on \$22.9 million today. That's less than HALF what the Templeton fund yielded investors!

And in 1992 John sold his entire group of funds - worth \$25 billion - to Franklin Resources, Inc. for \$440 million.

Today, he is living a life of luxury in Nassau, in the Bahamas.

Think he was just a rich kid who got richer as he got older? Think again...rather, listen up. That's not how the world works. John Templeton wasn't born rich. In fact, he was born on Nov. 29, 1912 in Winchester, Tenn. - a small town only miles from where the famous Scopes Monkey Trial took place.

After graduating first in his class at Yale (which he put himself through by working three jobs), Templeton took a job on Wall Street. He loved stocks, numbers and the promise of big returns. And he knew he could make a fortune investing in the most lucrative stocks of all time - small-cap stocks. By 1939, just five years out of school, John saw his opening. Problem was, he had no money to act on his knowledge.

But that wasn't going to stop the young farmer from Tennessee.

In a move slated for the Investment Hall of Fame, John went to his boss and begged for a \$10,000 loan. Remember, this was 1939 - 10 years after the start of the Great Depression. The Dow Jones was down 73% from its high in 1929. And most people were petrified to invest in any stocks - let alone small caps. Plus, \$10,000 was a lot of money - the equivalent of \$135,899 today.

But John's boss knew there was something special about this kid. He studied the markets like a bloodhound looking for a faint scent in the woods. And when he found it, the gains were sure to follow. So he gave John the loan - all \$10,000.

It proved to be the best move he ever made.

Templeton took the money and invested it equally in every single small-cap stock trading on a major exchange for \$1 or less. There were 100 stocks all told. He was betting these stocks would lead the way out of the Depression. And boy, he was right.

Between 1939 and 1943, John's investment grew from \$10,000 to \$40,000 - despite four of the companies going bankrupt and losing everything!

Today, Mr. Templeton is retired, living in the Bahamas. His net worth is an estimated \$2 BILLION. He owes his fortune to that day he went in, hat in hand, to borrow the money from his boss...and took a calculated gamble on the fiery strength of small companies and their will to survive in tough markets.

Today, I'm offering you a similar shot...speculating on the very fiber of America's future leaders. With the right guidance, you could achieve similar results. In fact, I am so confident of these stocks' effectiveness, I'm willing to make you the best offer of my entire career.

If you give my service a try today, not only will I give you the first six months **FREE** (to show you how amazing these stocks really are), but I'll even go one step further...

If you aren't 100% satisfied with the results, all you have to do is write to me and prove my system let you down. Then I'll send you TWICE WHAT YOU PAID ME back.

Simple as that.

No one else can afford to make that kind of an offer. But there's a simple reason for that. I know something no one else does...

These stocks were good enough to help John Templeton quadruple his money after the Great Depression. They have been proven to be the most lucrative stocks to own over long periods of time. And I have NO doubt they will help you make a pretty penny in this market!

Sign up today, and I'll give you ALL the details you need to start your own profit chain in 2005. I can't promise you'll make \$6.6 million like last year. That was one of the best runs of all time. But the stocks I'm about to show you are hot.

Look at what the mainstream newspapers and magazines are saying RIGHT NOW about the stocks you could be making a fortune from:

"Small-cap stocks have outperformed the market as a whole for the past five years, with the Russell 2000 Index returning an annualized 7.41% for the past five years, while the S&P 500 has lost 1.31% annually for the five years ended Sept. 30, 2004."

-Forbes.com, Oct. 28, 2004

"Small companies grow more rapidly than big companies. They make decisions faster, get in faster and the management is more flexible."

-Stephanie Haggerty, Atlanta Journal-Constitution, Nov. 5, 2004

"On Wall Street, it's the small fry delivering the big returns."

-USA TODAY

"Small caps will rule the world for a while. I don't see anything to change that."

-Mary Lisanti, AH Lisanti Capital Growth

"Stocks you've never heard of are exploding."

-Scott Black, president of DELPHI Management

"Large-cap stocks make the headlines, but lately, the small-cap stocks have been making investors money."

-TheStreet.com, Nov. 1, 2004

"Small caps have doubled the performance of large caps so far this year, as well. The Russell index, currently trading at all time highs, is up 10.95% year to date, while the S&P 500 has gained 5.71%."

-Meg Richards, Associated Press, Nov. 17, 2004

"Companies with a market value below \$1 billion can by nature grow more quickly than bigger companies. And the good ones can post explosive earnings that drive double-digit returns for investors."

-Yahoo! Finance

The ONLY Major Group of Stocks to Beat Their 2000 Highs!

Not only are small-cap stocks making headlines, they are also rising with a purpose right now. Since 1999, small-cap stocks have blown their large-cap peers out of the water.

The Russell 2000 (known as the 'small-cap index' on Wall Street) pummeled the S&P 500 by 200% in 2000, 17% in 2001, 3% in 2002, 90% in 2003 and 77% in 2004. In fact...

The small-cap index was the ONLY major stock index to not only reach its 2000 highs (during the height of the last bull market), but pass them.

Small-cap stocks are making smart investors with the insight and intelligence to go after them a lot of money. And they are doing so at a record-breaking pace. In fact, in the last few months, my readers have had the chance to make gains of...

- 87.5% on shares of little-known Alloy, Inc. (ALOY:NASDAQ) - a 'Generation Y' marketing company
- 56.6% profits on shares of DURECT Corp. (DRRX:NASDAQ) - a small pharmaceutical company
- 19.82% on leather maker Wilsons (WLSN:NASDAQ)
- 25.2% on Salton, Inc (SFP:NYSE) - maker of the popular Foreman grill.

And those who listened to my advice walked away with additional gains of 69.17%, 20%, 22.4% and 10% on Alloy, DURECT, Salton and Wilsons - again.

But that's nothing. In a second, I'll show you a real-life profit string that helped my readers make gains of 233%, 146.7%, 62.35%, 34.81%, 34.94%, 35.2%, 32.19% and more over a span of six months. In fact, from April to October 2003, EVERY single small-cap recommendation I closed out was a winner. Putting only \$200 into each stock, you would have been sitting on \$3,051.06.

And you have a chance to do the same thing NOW!

Before I show you this profit chain, let me introduce myself...
