**Inside You'll Discover:**

**Why indiscriminate fear of the market is  
foolhardy...**

**Why I trust the management of these 3  
companies...**

**Why I am confident enough to put my money  
where my mouth is and invest millions of my own  
in these...**

## **5 STOCKS THAT CAN DOUBLE OR TRIPLE IN THE NEXT 9 TO**

# 12 MONTHS!

*"To believe all men honest would be folly. To believe none so, is something worse."*

**- John Quincy Adams**

*"Men cannot be forced into trust."*

**- Daniel Webster**

BUT...

James Davidson's early insights, accurate predictions and amazing stock picks have earned the trust of all who know him...

In 1989 he predicted that the Soviet Union would break up.  
In 1993 he wrote that Islamic terrorists would attack the U.S.  
In 1994 he explained why there would be war in Afghanistan.  
In 1991 he knew that the Nikkei would totally collapse .

And, while say-one-thing do-another analysts robbed investors blind with Enron, WorldCom & Global Crossing...

- His clear vision steered clients to a little known mining stock that still hasn't made Wall Street's radar screen. Right now, it's up 150%... and rising.

- He recommended an unheard of tech stock selling for \$1.47 on Jan. 24, 2002. By March 6 it reached \$3.40. That's a 131% gain in less than 2 months.
- He recommended that his readers buy 5 New Zealand Dollar future contracts in May. One month later he closed-out the position for \$9,300 in pure profits!

***"Fear is like fire: if controlled it will help you; if uncontrolled, it will rise up and destroy you."***  
**- John F. Milburn**

Dear Investor:

I suspect, if you are like most investors, you're just numb.

Understandably so. You are suffering through the stock market equivalent of the 'perfect storm,' the improbable convergence of a recession... a succession of unimaginable criminal frauds... a string of high-profile bankruptcies... and an unexpected continuation of poor earnings. It's a once-in-a-century confluence that has absolutely clobbered the stock market.

And every time you think the market has finally turned, along comes another Enron... another WorldCom... Tyco... or Adelphia, to kick the daylights out of the struggling recovery.

Perhaps like so many investors, you soothe your wounds by comparing notes and taking solace in the fact that almost everyone's portfolio seems to be down 40%... 60%... even a hard-to-believe 80% or 90% from previous highs! In truth, the pain is excruciating. This has been an absolutely devastating market that has simply scared the stuffing out of even the most seasoned investors.

Worst of all, you undoubtedly feel that you can no longer trust the information you were accustomed to using for investment decisions. You've been lied to. You've been misguided. You've been had. You were cast adrift in the fog only to discover your compass was busted!

So whom can you trust?

And what are you going to do now?

Unfortunately, the answers for many seem to be: trust no one... do nothing! For others, it means pulling your few remaining dollars out of the market altogether...

And that is what troubles me most about this crisis of confidence.

**Fear and mistrust could be standing between you and the total recovery of your portfolio!**

Fear and mistrust may be keeping you out of this bargain-strewn market. Cicero wrote that 'No power is strong enough to be lasting if it labors under the weight of fear.'

Fear has wrecked the once-powerful bull

***"Vantage Point Investment Advisory is great and James Dale Davidson's point-of-view is exceptional. I always enjoy the newsletter and am***

market. Fear can wear you down and eventually paralyze you. Fear can keep you from making back the money you lost. Or you can turn other people's fear into your opportunity to make tremendous profits.

You see, there are dirt-cheap stocks to be found amongst the rubble. I know with absolute certainty that you can double or triple your money in the next 9 to 12 months if you have the conviction to invest soon in the 3 companies I want to tell you about.

In fact, I hope this reports gives you the confidence to let go of your understandable fear and to pick up shares in these 3 exhaustively researched stocks. I will explain why these companies belong in your portfolio in a moment...

**First, let me tell you this: My money is where my mouth is.**

For reasons I'll get into, my thorough, firsthand investigations of all 3 of these companies convinces me that each is on the verge of explosive growth. I am a private investor, and like you, my goal is to make money with every company I invest in. And I have put more than \$2 million of my own money into these 3 companies, so I have a lot at stake.

But I'm totally comfortable because I believe each of these 3 companies is a 'next Microsoft.'

**Second: I have a long, public and vetted track**

**excited to read about the investments that you are looking at. Thank you for the opportunity to learn. I expect to be a subscriber for some time. "**

**-- A. Runningbear,Minden,  
NV**

record.

My name is James Dale Davidson. I am not a stockbroker, an analyst or an investment banker.

I am an independent businessman and entrepreneur who happens to be extremely well connected. Because of my position on the boards of some 20 international corporations, because of my extensive travels and working relationships, I sometimes hear about small but exciting transformational companies that haven't yet caught the interest of big investment bankers.

To help you judge the validity of the information you're about to read, and so that you feel confident about these 3 stocks I'm recommending, it's important that you know a bit about my ability to correctly predict world events, their impact upon the stock market, business trends and the profit performance of individual stocks:

- Back in 1989 I predicted the breakup of the Soviet Union.
- In 1993, I co-authored a best-selling book titled, The Great Reckoning, in which I predicted the rise of Islamic terrorism, detailed exactly how terrorists would threaten the fabric of Western society and laid out how it could disrupt the stock market.
- In 1994, I predicted that war would erupt between the Taliban and the northern forces in Afghanistan.
- I correctly called the impending collapse of the Japanese stock market in 1991 while Japan was still flying high.
- I wrote in the mid-1990s about the coming importance of technology, predicting the meteoric rise of the Nasdaq and its eventual collapse.
- In 2000 - when most were still calling it a 'technical correction') I predicted that the stock market was headed for a long, downward spiral.
- In fact, the record shows that I have been way ahead of the curve in

predicting every major political and financial event of the last 17 years.

I feel somewhat uncomfortable saying this, but it's important that you also know that I have personally made many millions of dollars investing my own money my way in breakthrough companies while they were still too small to show up on Wall Street's radar. Here are a few examples...

- In January 2002, I bought 100 shares of ONI Systems Corp. (ONIS) for \$4.75. In February, I sold them for \$6.65 a share undefined a 40% profit while the Dow Jones fell 6%.
- Also in January 2002, I told my readers to sell short shares of software giant Microsoft at \$64.60. Just as I predicted, by May 3, 2002, MSFT fell to \$49.56. We sold for a 23.3% profit.
- In 1998, I recommended buying shares of Mediaconsult.com for \$1.08 a share. By the end of the year it was selling for \$4.38. That's a 306% profit in just months.

Take advantage of the more than 127,450 frequent flyer miles I logged last year... and increase your own wealth

I've made money not by trying to predict what stocks Wall Street might fall in love with next, but by doing the exhausting, face-to-face follow-up work of investigating the promising but little-known companies I hear about from my business associates. I do my own legwork!

I do not trust information in annual reports. As you've seen, it's all too easy to fudge the numbers. I never rely upon a company's financial statement.

When I'm contemplating an investment of a million dollars or more of my

own money, I insist that I sit down with the company's financial people. I might ask to see actual bank statements. I might bring in my own auditors. I trust no one until I have reason to. In the past I've even used private investigators to verify certain facts or to find answers to nagging doubts.

One of the three stocks you'll soon learn about is a minerals development company headquartered in Turkey. When the company's chief mineralogist reported to me that a sample taken from an exploratory shaft in Cukurdere contained the highest concentration of gold he'd ever seen, I didn't take his word for it. I got on a plane to take a look first-hand at the random samples taken from the drill core. I examined these, and observed in person the look of excitement and near-disbelief on the faces of management as they, too, marveled at this discovery. It is believed to be the richest gold find in a single drill hole anywhere in the world in the past three decades. One more check: I then turned to Watts, Griffs & McQuat, a respected and independent research firm. They also confirmed the existence of a vast gold mineral resource at Cukurdere.

I am convinced, to the point that I now have a million shares of this minerals company and have agreed to take an active role as a director.

I did all of this because my money is at stake. I am very cautious with my money. And as I said, I am confident enough about the future of the 3 companies covered in this report to have already invested several million dollars myself.

When I'm investigating a company and I see something I don't understand or that doesn't seem to jibe, I either get a satisfactory answer or I don't invest. It's that simple.

I insist upon spending time getting to know the management. Not in some fancy hotel in New York or London but at their office and, if I can, in their homes. I might spend a week in New Zealand, or in Kurdistan or some

lumpy mining town in Alberta. I go one-on-one to breakfast and dinner as often as possible with each of the principals. I try to meet the families of some of the executives involved and to see what kind of lifestyle they live. I like to see how they bring up their children and what sort of values they impart to them. I get a sense of what kind of people they are. And if I don't get the right 'vibes,' I don't invest.

I also investigate the competition. I might visit a company's competitor in hopes they would reveal something I hadn't picked up on. I want to know everything there is to know about the industry a company is in.

I've completed each one of these investigative steps with all 3 of the companies you'll learn about in this report. But that's still not enough to guarantee I'll invest...

For me to sink my money into a company, it must be on the cutting edge of what I call a transformational trend. I look for companies that represent paradigm shifts and that offer the potential for huge profits - like investing early in Microsoft or the Intel.

- Most companies today are mired in incremental innovation - they change only as needed to keep up. You and I are not interested in such companies.
- A few companies are forging ahead with substantial innovation - they lead, not follow, but that's still not what we seek.
- Transformational innovation is altogether different. It fundamentally and irrevocably alters the way things work. We're talking breakthrough! The difference is logarithmic. This is where we'll make our profits.

I'm betting a great deal of my own money that I'm right about the 3 super wealth-builder stocks that follow. Each represents a breakthrough. Read on

and you'll discover why I expect each of these 3 stocks to be trading 100% to 200% higher in the next 9 to 12 months.

**Super Wealth Builder #1:** When MIT said this technology would change the world, I checked it out. MIT was right, but Wall Street has the details all wrong!

Long before computer chips allowed us to perform complex tasks in milliseconds, or software enabled us to correct work as we type it, the Massachusetts Institute of Technology said the PC would change our lives in ways we couldn't even imagine. MIT was right!

Before the Internet allowed us to send e-mails, buy gifts online and check up-to-the-minute stock prices, MIT said the Internet would make our lives more convenient than we ever imagined. They were right again.

Early investors who listened to MIT made millions. Just \$10,000 invested in Microsoft quickly turned into over \$5.54 million. And \$10,000 invested in America Online became \$2.11 million in just a few years.

Now MIT says there's a change-everything technology that will make the world dramatically safer from terrorist attacks. I respect the people at MIT, so I checked it out thoroughly myself. I believe MIT is right again and that this technology will indeed be huge. So I've invested some of my own money in this new technology. Wall Street is excited about it too, but my personal investigations tell me most of Wall Street is betting on the wrong horse.

This breakthrough technology could have prevented the September 11

terrorist attacks from happening. It's that powerful. This technology will one day eliminate online fraud, cut murder rates by 80%, help find missing children and put known criminals behind bars.

The next great killer application that could turn \$10,000 of your money into millions is a biometric technology known as 'facial recognition.'

Biometrics is the digital technology that identifies individuals by using high-speed computers and sophisticated software to electronically capture physical features and match them against those of known people in a database.

**Not some short-lived, opportunistic reaction to the terrorist attacks!**

Naysayers claim that facial recognition is worthless if you don't have the faces of the bad guys in your databank. But they miss the point. Frequent flyers and the rest of us who are willing to register will, in the not-too-distant future, stroll quickly through a hassle-free 'preferred' screening port where a computer program will instantly recognize us.

Furthermore, had airports set-up biometric security systems before September 11, and had the Immigration and Naturalization Service been doing its job, the 19 terrorists might never have boarded the planes. In the future, security cameras will feed biometric data to a computer to be matched within 5 seconds against a database of a million known criminals, terrorists, people with expired visas and anyone the authorities are interested in for any reason.

Despite the rhetoric of the liberal press and the civil libertarians, in a Harris Poll taken after the September 11 terrorist attacks, 86% of the

people polled said they were in favor of using facial-recognition technology to prevent another disaster.

If a future terrorist were to test the system, bells would sound, police or National Guardsmen would apprehend the terrorist and perhaps thousands of lives would be saved.

Soon every major airport, police department, government agency and sporting arena will use biometric technology to protect you from harm's way and speed your hassle-free passage through security. Its potential uses also include automated bank tellers, hospitals and government agencies, subway stations, sporting arenas, major ports, large corporations... just to name a few.

Wherever there is a door in an airport, a large corporate building or a government agency - there will be a need for facial recognition. That's how large the market is.

Plus in the future, thanks to facial recognition, you will never have to worry about carrying around a security card to enter your workplace. A security camera will instantly recognize you as a legitimate employee and the door will open.

This state-of-the-art technology will eliminate identity theft. A stolen or lost ID or credit card will be useless.

**Facial-recognition technology is already beginning to generate real profits**

Revenues from biometric technology totaled \$250.9 million in 1999. The International Biometric Group predicts revenues in 2005 will total over

\$1.9 billion. That's an annual growth rate of over 40%.

But... Wall Street has it all wrong!

Wall Street has recognized that biometrics will be huge. But Wall Street fell in love at first sight with what is known as the 'Face It' system, made by a company named Visionics. You may know the name - they have succeeded in getting a great deal of Wall Street publicity.

Don't buy Visionics stock! It's not the company that will ultimately dominate the field. There is more than one facial-recognition system on the market. And a lesser known and newer system is far superior.

Before I go into detail about why this company has a far-superior system of facial recognition, I need to explain... I cannot disclose the actual name of the company here.

You see, if I tell you - and the other potential subscribers to my investment newsletter (who are reading this same report right now) the name of the company, the information is less valuable to my loyal subscribers, and that wouldn't be fair to them.

I've made millions for my readers by finding these still-undiscovered companies as they sit perched on the edge of greatness. I respect my subscribers by protecting my best information. I'll give you all the details. I'll tell you how you can get a no-risk, trial subscription to my advisory, Vantage Point Investment Advisory and receive a FREE Special Report that spells out all the investment details, including the names of all the stocks I'm invested in now. But for now, I am sorry, no names!

Here's why the system I'm talking about (I'll refer to it as the X-System...) is more accurate than anything else out there, or even on the drawing board, and why it's garnering an ever larger share of the biometric market

with each passing month.

Here's what my sleuthing turned up:

Both Face It and our X-System map out the features of a person's face. Every face has certain distinct characteristics, the peaks and valleys and the size and spacing that make up your different features.

What's called a 'nodal point' is simply the relationship between two points. For example, let's say the distance between your upper left eyebrow and the right side of your mouth is 4.4623 inches. The Face It software recognizes these nodal points... and 79 others that positively identify an individual.

Sounds impressive right? Wall Street thinks so.

Well, 80 nodal points was impressive... when the technology first came out.

But the X-System uses 200 nodal points!

The X-System was designed after Face It and is far more accurate, and better suited to handle low-light situations. And it can search a database using text descriptions or photographs of an individual whereas Visionics can search only if it has a live image. What does this mean?

The more details incorporated into facial-recognition systems, the greater the accuracy and the fewer incorrect or missed identifications. If a criminal wears a particular kind of eyeglasses and has a nose ring, the X-System uses those features to positively confirm his or her identification.

With the X-System, law enforcement officials can use a photograph or a

police sketch to match a known criminal to an existing database of felons. But that's not all this system is capable of doing. It also recognizes suspects by identifying marks such as scars and tattoos.

Details like these guarantee X-System's dominance in an explosive market. Simply put, the system I recommend is at the top of its field. And law enforcement agencies have begun to recognize its superiority.

One of the most recent converts to this facial-recognition technology is the Royal Canadian Mounted Police of North Vancouver. After doing its homework, they decided they had to have this X-System. It was exactly what they needed undefined a system that could identify offenders with as little as a photograph or drawing.

**Best of all, the stock isn't yet on most investors' radar screens. This is your chance to grow rich on a groundbreaking technology!**

And the best part is that this is a relatively unheard of stock. That's because the company is located in Canada. It's outside most mainstream investors' radar screens.

My firsthand investigation revealed another reason to feel confident this company will rule this new industry. Its chairman, Oliver ('Buck') Revell served for over 30 years in the Federal Bureau of Investigation where he advanced to associate deputy director - the second highest position possible. He has served on many presidential and vice-presidential task forces. He's also been a member of the Terrorist Crisis Management

**"I stand in awe of the way  
Jim Davidson surges  
forward... a sort of Paul  
Revere of the 21th century."**

**- Margaret Finn, Pasadena,  
TX**

Committee of the National Security Council. And he's a lifetime member of the International Association of Chiefs of Police - where he founded its Committee on Terrorism. It's no wonder why some of the world's largest airports and police departments trust this man's security products.

X-System's technology was recently selected over the competition...

- For installation at Toronto's Pearson International Airport, one of the world's busiest
- By local police in Oakland, California, for a countywide surveillance program that includes the Oakland International Airport
- By the National Crime Squad as a new weapon against child pornographers.

Still another indication of its bright future is its stellar collection of international strategic partners. I've checked, and they include Serco in Great Britain, Bull in France, Cheung Kong Infrastructure in Hong Kong and Sanyo and Fujitsu in Japan. These partnerships enabled the company to significantly grow its revenue in 2001.

**I'm expecting a profit of over 1,400% in the next few years! \$10,000 could become \$140,000!**

In 2001, X-System helped bring in gross revenues of \$2.1 million - a 90% increase from 2000. And sales of software products increased 108% to over \$1.5 million from just one year ago

It's obvious the company is growing rapidly. But the results from 2001 may very well be conservative. 2002 and 2003 should see far more growth (and this would benefit early investors).

Since the atrocities of September 11, demand for biometric facial-

recognition technology has soared. An independent study conducted by Rob Klein of Thomson Kernaghan & Co. Ltd. estimates that the company will bring in total revenues of over \$7.67 million in 2002 and over \$21.1 million in 2003. That is an increase in revenues of 265% and 904%, respectively (based on 2001 revenue).

**Revenue will jump from just over \$7.67 million in 2001 to over \$21 million in 2003!**

X-System has already nailed down several multimillion-dollar contracts with major international companies. These contracts alone exceed its total revenue for 2001 and (as of this writing) we're only through two quarters of fiscal year 2002.

One of the most impressive contracts recently signed was with Japanese conglomerate Sanyo. They committed \$2 million to form an affiliate company based in Japan that will provide a multi-level security and verification solution for controlling access to buildings, airports and even documents.

**Their new financial advisor wanted to OWN the business...**

Here's a bit of information Wall Street probably doesn't have, a good example of the extra edge that comes with doing your homework: Earlier in 2002, financial advisor Pembridge Group of Boston sent a letter to the board of directors making an offer for a complete buyout. Pembridge, who only served as financial advisor since January 2002, was so impressed with the financial outlook it wanted to buy the business outright.

Pembridge's offer, while flattering, was not accepted. And that's good news for you. It means you have the opportunity to invest for yourself.

**Get in now before it moves to a senior exchange...  
and ride this stock to the top!**

Right now, the stock of this company is trading over-the-counter. But with the multimillion-dollar contracts it signed over the last year, there is speculation that they are close to making the jump to a more senior exchange undefined like the AMEX. If this happens, the stock could jump up hundreds of percent in a couple of weeks.

And, according to Rob Klein, there's no reason this stock shouldn't be trading as high as \$3.50 by January 2003.

The \$3.50 price target is derived from an estimated price-to-earnings ratio of 16, based on predicted 2003 earnings of \$0.22 per share (or \$21.1 million in revenues).

I am recommending that my subscribers load up on this stock now, regardless of what's happening to the rest of the market. And I hope you'll want to act as well. You'll get all the details by return mail when you send in the no-risk trial subscription form at the back of this special report.

Get complete details in your FREE Special Report: **5 Little-Known Stocks Set to Double or Triple in the Next 9 to 12 Months!**

**Super Wealth Builder #2: Potentially even better  
than buying early Microsoft or Intel!**

To write off all of technology as a burst bubble is utter folly. We are still in

the early stages of a technology revolution that will change your life and the lives of your children in ways that we cannot yet imagine.

So, to think that technology will never again lead to the kind of paradigm shifts responsible for incredible growth of companies like Microsoft, Intel or Sun Microsystems, and the amassment of huge fortunes, is nonsense.

Just to refresh your memory...

- \$10,000 invested early in Microsoft is still worth over \$3 million, even after the meltdown.
- If you'd put just \$10,000 into Intel at the start, at one point you'd have had over \$21 million.

If you think it's too late to dream about the kind of super stock that will multiply in value 10 times or more in a single year, and then keep right on growing and multiplying your initial investment 150 times over in a decade... you're wrong! I want to tell you about a stock that I believe has the potential to turn an investment of \$25,000 into a fortune of \$3.75 million in the next 10 years or less.

No, I'm not trying to resuscitate one of those chip-related high tech companies.

I believe the next great frontier is medical, more specifically, the war on cancer. A cure for cancer has long been the holy grail of medical research. And as recent news reminds us, many companies make promises about this or that medical breakthrough. In time, most of what once seemed like promising research turns out to be nothing more than over optimism.

Which is why most of the formerly highflying biotech stocks that enjoyed a rocket ride on the back of the excitement over unlocking the human

genome are trading at a tiny fraction of their former highs. But don't get me wrong. In most cases, just because these biotechs are selling at a huge discount is no reason to rush out and buy them.

But I do believe that advances in biotechnology will rival the explosive growth of the micro processing field that began in 1958 when a little company named Texas Instruments fabricated the first integrated circuit and began selling calculators.

And, in the particular case I'm about to share with you, Wall Street has definitely thrown the biotech baby out with the bath water.

I'm heavily invested myself in the stock of a pharmaceutical company that is on the cutting edge of what are called immunotherapies - therapies that show genuine promise for curing and alleviating some cancers, infectious diseases and autoimmune conditions, including transplant rejection.

As an investor, this is your opportunity to profit from one of the greatest medical breakthroughs of all time. I know... I know... you've heard that kind of talk before. But hear me out:

This company, based in Vancouver, British Columbia, has a novel immunotherapy vaccine that shows great promise in the treatment of several types of cancers deficient in the TAP protein (associated with antigen processing), including small cell lung cancer, breast cancer, melanoma, prostate cancer, colorectal cancer and cervical cancer.

The vaccine works by restoring TAP-dependent immune system pathways within cancer cells. In other words, some cancers destroy the body's protective immune system by attacking a key protein. TAP and this vaccine restore the protein so that the immune system can take up the fight against the cancer cells. The vaccine has the ability to heighten the immune

system's ability to recognize the cancer cells as 'foreign,' thereby boosting the natural processes designed to destroy them.

The vaccine works by delivering the TAP gene via a vital vector (vaccinia virus) to the cancer cells to recreate the TAP pathways.

## An entirely new approach that has won a vital U.S. patent

The company's exclusive technology for restoring immune system pathways has been proven in the laboratory and initial animal trials. Mice injected with lung cancer (one of its most virulent and least survivable forms) have a 70% survival rate when treated with the therapy, as opposed to a morbidity rate of 100% among untreated mice.

The next step is to move the TAP product into clinical trials and to win FDA approval for this revolutionary approach to curing cancer.

The vaccine is a broadly enabling technology that should enhance the performance of other drugs or therapies, and TAP-1 was awarded a U.S. patent in March 2002 for use against all cancers. In other words, no other drug company can market a cancer cure that restores the body's own defense systems in this particular way.

## Experienced, real-world leadership

The resident genius behind this company, Dr. Wilf Jeffries, is the company's chief scientific officer, an Oxford-educated research cytologist and leading expert in the field. Dr. Jeffries is

**"You... are the shining light in the darkness of our dim times..."**

a member of the Biomedical Research Center and the Biotechnical Laboratory at the University of British Columbia

- Dana Swan, Newbury Park, CA

and was the founder of Synapse Technologies, which was recently acquired by Biomarin for a great deal of money.

But Dr. Jeffries isn't the only bright and well-known star at this company. In April 2002, Dr. Julia Levy, recently retired president and CEO of QLT Inc., came aboard as chairman of the board to help with the practical end of the business.

You may be aware that Dr. Levy became a legend in the biotech world when she led QLT's lucrative transformation from a small Canadian start-up into a multibillion-dollar biotech giant. If Dr. Levy is half as successful with this company as when she was with QLT, the upside will be immense!

I firmly believe that the battered biotech sector is poised to capture the market's attention in a big way, and I am very proud to say that I have personally provided some of the initial start-up funding for this company.

It officially became a publicly traded company in July with the stock opening at \$5 and ending the day at \$6. As of this writing the stock is up slightly from there, even as all of the market indexes have suffered huge losses.

It is entirely credible that the stock could go to \$60 or even \$100 if and when clinical testing vindicates its immunotherapies. Remember, Biogen went from \$10 to over \$100 in just three years based upon the sales of a single drug, Avonex.

In fact, almost no price would be out of the question if immunotherapies

were proven to cure cancer. Your \$6 or \$7 investment could (on a split-adjusted-basis) be worth \$1,000 one day! I am not predicting that, but it is possible.

I cannot provide you with assurance that human trials will indeed prove immunotherapies the sort of breakthrough we hope for. I can assure you, however, that you can invest in this company with the confidence that it is not another great sounding, over-hyped fraud. Its bookkeeping is sound and it has a simple, practical and totally realistic business model.

I urge you to get all the details by subscribing to my Vantage Point Investment Advisory, where you'll find complete information.

Get complete details in your FREE Special Report: **Single Best Stock to Own for the Next Five Years!**

**Super Wealth Builder #3:** My readers have already seen profits of 114% but it's not too late to get in!

Here's the short version of the story on my third stock, the little-known minerals development company headquartered in Turkey that I mentioned earlier.

Before I get into details about the company, I want you to know that I am a director, that I own a million plus shares, and that I'm also telling my subscribers to invest in this stock now.

I mention this because some in the investment community hold that advisors should not invest in the companies they recommend.

My view is precisely the opposite. It helps me immensely to understand a company's business to serve on its board. And you can be certain that when

I own a million or more shares - as is the case here - that I pay keen attention and exercise my best judgment in all company matters. I believe that as long as I disclose to you the potential that my advice is informed by undue optimism about my holdings, you should be free to judge for yourself the advisability of any moneymaking opportunity.

Equally, I feel an obligation to bring every advantage of my position - insofar as is legal and proper - within reach of my subscribers. When I am intimately informed about a company's prospects and excited by what I see, I would feel as though I were betraying my implied contract with my subscribers if I remained silent about a chance to buy a company at 96 cents per share... when I think it has good prospects to rally.

You know that I practice what I preach, because my money is where my mouth is.

Here's the story on this extraordinary opportunity:

As terrorism and reversion to more primitive affinities of religious lunacy assert themselves, gold is likely to re-emerge as a monetary instrument as it did in the wake of revolution and upheaval in the 18th century.

I expect more barbarism to enhance demand for gold, once referred to by leading economists as 'a barbarous relic.' For one thing, gold is not an instrument of faith in someone else's liabilities. Gold's value does not depend upon the Pentagon remaining open or the Federal Reserve retaining the capacity to respond to new economic data. Nor, as any resident of Argentina would appreciate, does gold's value depend upon the banks staying open.

What is the best way to own gold? There are many answers, but my favorite is to enjoy the upside leverage obtainable by purchasing an

undervalued junior mining company with a significant gold position. This is the only way I know of to buy gold for pennies on the dollar.

Of course, it is hard to locate a junior mining company with a vast upside that is not also prone to go out of business if the drills are not located in precisely the right spots to delineate a high-grade deposit. I feel well qualified to say this, having had a hand in launching about a dozen or more junior mining companies in the early to mid-1990s.

## The richest gold hole drilled anywhere in the last 30 years

Here's why I unabashedly recommend this minerals development company to my readers.

When I first learned of the boastful results of a test drilling for gold in Cukurdere, Turkey, I was skeptical. The concentration of gold claimed would have made it a spectacular find and besides, you never know what kind of people you're dealing with in this part of the world.

But I was intrigued enough to fly to Turkey and find out more on my own.

I actually visited the drill site. I spent days talking to geologists. It was verified to me that the samples did indeed represent an extraordinarily rich deposit of gold, I then turned to a research report prepared by Watts, Griffs & McQuant, a respected and independent firm that also confirmed the existence of a vast gold resource at Cukurdere.

Next I began an intense investigation of the business end of this small minerals development company. It's of no profit to have the world's richest resource of gold if the management is going to botch things up. Here's

what I found:

The fact that this small company had managed to survive at all in the terrible environment that prevailed for this dog-eat-dog sector was a mark of the brilliance and skill of the CEO. After a thorough investigation, and after having sat in on high-level meetings with the other prominent mining companies that are joint venture partners, I agreed to a major role in the future of the operation. I am one of the founders and a director of the new company that now controls the Cukurdere gold reserve.

Talk about putting your money where your mouth is... Including options, I have more than a million shares of this company. Because of my position, I travel frequently to Turkey and make a point to personally check on the company's mineral claims. I have recently witnessed firsthand the excitement with which knowledgeable geologists react to the outcropping and the measurements of confirmed mineralization taken from drill results.

Speaking from this position of prejudice, I feel that the company's geological and strategic position is ideal. For one thing, it has formed a partnership with two of the foremost mining companies in the world, Cominco and Rio Tinto. These solid partnerships provide our company with sufficient financial backing to enable it to continue exploration and to begin the business of extracting the gold from its exciting mine in Turkey... all without a financial stretch.

As I've said, the company's Cukurdere copper/gold prospect now being developed in conjunction with Rio Tinto appears to be the richest gold find in a single drill hole anywhere in the world in the past three decades. But additional drill results, announced by sheer coincidence on September 11, 2001, have since confirmed that the gold zone stretches much farther to the north and east than previously suspected.

Until recently, the company had not made a calculation of the total likely gold reserve of the Cukurdere prospect. In the March 2002 issue of Vantage Point Investment Advisory, I stuck out my neck and made my own back-of-the-envelope estimate. It had been pretty well established that the gold-bearing region is an average of 68 meters thick, at an average grade of 2.2 grams gold per ton. On the basis of those parameters, I made a calculated prediction that there were at least 2.5 million ounces present in the 200,000-square meter rectangle area defined by step out drilling from a hole labeled CRC-1A.

**My estimate has since been proven to be conservative!**

The company recently released a resource report prepared by Watts, Griffis & McQuat, confirming the existence of a vast gold mineral resource at Cukurdere. Indeed, I am delighted to tell you that the report determined that there are at least 3.6 million ounces present at Cukurdere, with the possibility that the resource could prove to be much larger with further drilling. There is huge potential upside.

**"I should not be amazed time and time again as I watch your predictions unfold into reality."**

**- Dennis Squillacote, Wilton, CT**

The remaining zone to be further defined by drilling appears to be larger, with a higher grade of gold. (Hole CRC-1A showed 80 meters of 10.4 grams gold per ton.) Since the drill holes bottomed out in rich gold-bearing mineralization, it is still to be determined how much gold is there and whether it is recoverable. Those caveats considered, I believe that this company has a large upside potential.

The results are so encouraging that it seems only a matter of time until partner company Rio Tinto constructs a mine there and brings it into production. As this implies substantial earnings for our company, it makes the stock a very promising buy. With just 26.5 million shares fully diluted, the company has a tiny market cap, equivalent to about 45,000 ounces of gold in the ground compared to the 3.6 million ounces confirmed so far.

An old hand I know in the prospecting business expects the stock to trade at \$10 by the end of 2003. I recommend purchasing 10,000 shares under \$1. I urge you to subscribe now to my Vantage Point Investment Advisory so that I can tell you both the name of the company and how to go about buying shares. It's not readily available through Wall Street brokers.

Get complete details in your FREE Special Report: **5 Little-Known Stocks Set to Double or Triple in the Next 9 to 12 Months!**

## This will continue to be a stock-picker's market

History tells us that following an extended period of economic expansion, like we enjoyed from 1982 to 2000, that the stock market gyrates wildly... but essentially goes no place.

Three, five, perhaps even 10 years from now the Dow and the S&P are likely to be about where they are now.

- From 1929 to 1945 the Dow gained only 1% per year on average, and yet within that period there were wild swings from which some made millions.
- From 1966 to 1982 the Dow was virtually unchanged as it swung up and down by as much as 45%!

If it happens again, and I believe it could, you don't want to be flat-footed.

You need to be a nimble and opportunistic investor. You can make huge profits as the market gyrates, if you are in the right stocks at the right time.

I've named 3 such stocks in this special report. I'm substantially invested now in all 3 of them. My money is where my mouth is. But these aren't the only 3 stocks I own that I'm confident of 100%... 200%... even 500% growth in the next 9 to 12 months!

**My personal target: Companies that can turn \$5,000 into \$750,000**

I've got millions of my personal money riding on the 3 stocks I discussed in this report PLUS a few additional opportunities. I tell you about all 5 of them in your FREE Report: **5 Little-Known Stocks Set To Double or Triple in the Next 9 to 12 Months**. And regardless of what the broad market is doing, this is a great time to invest \$5,000 or \$10,000 with the goal of turning it into \$750,000. Those are the kinds of gains I'm accustomed to. And if you subscribe to my investment service, *Vantage Point Investment Advisory*, I'll share with you what I'm up to with my own money.

I started *Vantage Point Investment Advisory* because I truly believe that this horrific stock market has created once-in-a-lifetime opportunities to invest in safe, solid world-changing companies while their stocks are dirt-cheap. And in all modesty, I think my track record shows I know how to identify them.

**You can have it all for 27 cents a day - And a Money-Back Guarantee**

The cost of a 1-year (12 issues) subscription is only \$99. That works out to 27 cents a day. A cup of coffee costs you more. When you join me for a year, I'll send you three free reports:

In your first FREE Report, **5 Little-Known Stocks Set to Double in the Next 9 to 12 Months**, you will discover a company that's on to a drink that could prove to be the next Coca-Cola! Just imagine how rich you'd be now if you had bought \$1,000 worth of Coke when it first went public. Here's your chance to invest for less than \$1 in a drink company with a revolutionary new product that could make you rich a lot faster than if you had bought the original Coca-Cola

In this crazy world, this hot new drink has the potential to multiply your initial investment exponentially!

We're talking about the world's hottest new health drink, LifeO2 SuperOxygenated water. It may just become the next really hot sports drink in a market that's worth billions!

LifeO2 SuperOxygenated Water is the product of a proprietary process that infuses this global co-branded product with up to 15 times more oxygen than ordinary bottled water. Research shows that LifeO2 SuperOxygenated water improves athletic performance, increases energy and improves awareness and concentration by elevating oxygen profusion in the blood.

The company holds 25 patents issued in the United States and foreign countries.

Don't laugh. If it catches on (and there is a very compelling story as to why it probably will) this could become the most-consumed drink on the planet. After all, would you have thought 10 years ago that half of the entire population would be carrying around designer water?

The original SuperOxygenated water, LifeO2, is already being sold in 31 countries around the world. Bottled water sales are already one of the most rapidly growing categories in the beverage industry.

Subscribe to my *Vantage Point Investment Advisory* and I'll share the name of this wealth builder with you today and give you my complete recommendation.

The second FREE report: **The Single Best Stock to Own for the Next 5 Years** details the exciting biotech company discussed earlier in the report which has the potential to multiply your money by 10 or more times in the coming months. I'm currently invested in this stock and recommend it to my subscribers. And when I'm adding new companies to my holdings or getting ready to take profits in the portfolio.

Plus, I'll send you a third report FREE: **Profiting in Uncertain Times: What Lies Ahead for Investors.** You'll get a peek into the challenges and the profitable opportunities that lie ahead. Find out what I believe will be the next great transformation in our world that will make investors rich many times over. In the 1980s software made a few investors independently wealthy. In the 1990s it was the Internet. You won't want to miss the "next, next big thing!"

Better yet, when you join me for two years (24 issues) at a cost of only 20 cents a day (which works out to just \$149), I'll send you a fourth FREE report. In **How to Profit From America's \$400 Billion Drug Cure**, I'll tell you all about the company that owns the exclusive rights to a vaccine proven to safely and effectively cure cocaine addicts. The FDA just gave it its seal of approval, and the research is plowing full steam ahead. This company is set to eradicate the \$400 billion a year drug cartel... and make investors rich on the way

This 24-issue opportunity represents a 50% savings off my regular price of \$298.

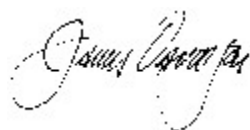

If you're not delighted with *Vantage Point Investment Advisory*, let me know within the first 30 days and I'll refund 100% of your money - you keep all your free reports. After that,

I'll give you a 100% refund on the remaining issues in your subscription.

I hope you will join me as a subscriber. There are very exciting times ahead, and I believe that the opportunities to grow independently wealthy, starting with a small amount of money, have never been greater. I can't urge you enough to act now. Time is of the essence with these stocks. You now have the opportunity to join us and save a full 50% while being protected by my ironclad money-back guarantee.

**To join us, simply click the "Subscribe Now" button below.** I will see that your free reports are rushed out to you. I look forward to saying "welcome aboard."
