

ATTENTION!

WAR ON TERRORISM ALERT

'Chuck the duct tape- Here are 25 ways to really protect yourself from a chemical, biological, or nuclear terror attack...'

Dear Friend,

Duct tape.

That's what the geniuses over at the freshly painted offices of the Department of Homeland Security (DHS) came up with after spending untold millions of your tax dollars in search of an effective way to combat bioterrorism.

Heck, Bob Vila could've told you that, right? Oh, and plastic wrap, too - let's not forget that revelation. Seriously, though...

It's a shame that in America today, we have to think about - and yes, even prepare for - such horrific events as a terrorist attack with biological or chemical weapons (or worse). But in the post-9/11 world, this is the reality here in the land of the free and the home of the brave. It's unpleasant to consider, but even more unpleasant not to consider...

Because despite what we may think, we're not invincible - or untouchable. At any time, dark forces could loose upon us horrific large-scale destruction - maybe even right in your neighborhood.

The bottom line is this: You need to be ready, armed with specific, actionable knowledge about ways to avoid these threats - or deal with them once they've struck - so you, your neighbors, or your loved ones don't perish. That's why I'm writing to you today - because even though it seems like no one on the tube (or on The Hill) is giving you much meaningful advice, there's actually a lot you can do to protect yourself.

That's right: There are many ways you can neutralize (or minimize) the effects of an attack by terrorist cowards - things those 'talking heads' of the media and the government just aren't telling you about that can keep you safe and healthy in even the most unimaginable of circumstances.

Keep reading and I'll show you how to find out exactly what to do - but first I want to tell you what not to do...

When the you-know-what hits the fan, running to the hospital might be the worst thing you could do

There are many possible ways those who hate the Stars and Stripes could attempt to strike terror into our hearts here at home - and some of the deadliest of these are also the easiest to deploy. But we'll talk more about that in a moment. For right now, I want to talk to you about what you should not do in the event of that most likely of terrorist acts - an attack on a major metropolitan area with agents of biological warfare...

The first thing you definitely shouldn't do is panic. In the event of such an attack, your best weapon is your head - so keep it cool and level.

That having been said, there's one more thing I'd caution you against doing in the event of a biological attack, and that's going to the hospital. I know that sounds like bad advice, but consider this: One of the biological agents terrorists would most likely use in an attack is highly communicable - yet

impossible to diagnose before the appearance of symptoms (usually 4-5 days)...

What that means is this: If you are infected, no one at the hospital will even be able to tell - but if you aren't infected, you're putting yourself in harm's way by entering the very place where others who've survived the attack (some of them no doubt infected) will flock to.

Besides, despite what the DHS and other bureaucrats assure us, our nation's hospitals are nowhere near equipped, staffed or trained for such an occurrence. You'd simply be trading one war zone for another...

So unless you're grievously injured or begin to develop specific symptoms, rushing to the hospital is not the best thing to do.

But there are 3 simple things you should do immediately after an attack that could mean the difference between living and dying. I want to tell you all about them - plus the more than twenty other survival techniques I've pinpointed - in my new special report entitled *The War at Home: 25 Weapons to Guard Yourself Against Bioterrorism and Other Threats...*

And guess what? Duct tape isn't one of them.

Meet - and defeat - these 'evil twins' of bio-annihilation

Now, I want to talk to you about a pair of apocalyptic biological toxins - both of them household names, and both of them enjoying reputations for the widespread horrific destruction of hundreds of thousands of human lives throughout history...

I'm talking, of course, about anthrax and smallpox.

Make no mistake; both of these formerly 'eradicated' diseases are very real threats to all of us. Why? Because long after their cures were discovered and dispensed, certain governments around the world (I won't mention any names - but it's not hard to guess) have chosen to keep these killers alive in secret laboratories. There can be only one reason for this: So they can be used as weapons. Scary, I know, but all too true.

What's even scarier is the fact that somewhere in this country, someone has access to one of these bio-terror toxins (anthrax) - and isn't afraid to spread it through the mail. And as the evidence shows, there's not a thing our law enforcement agencies can do to stop him. The sick irony is that certain governments spend millions to develop and preserve these deadly biological toxins - yet completely lack the ability to keep them out of the hands of terrorists or contain them in the event of an outbreak...

Consider this, also: If it had been super-contagious smallpox in those innocent-looking envelopes instead of anthrax, we'd probably all be dead right now. I tell you all of this not to frighten you, but to hammer home the point I made earlier: That when it comes to guarding against bio-terror attacks, it's up to you to protect yourself.

Good ol' American ingenuity: Both sword and shield against bio-terror

Fortunately, though, there are things you can do without your government's 'help' to minimize the risks from both anthrax and the even deadlier smallpox. In *The War at Home: 25 Weapons to Guard Yourself Against Bioterrorism and Other Threats*, I'll tell you how you can:

- Stock up on the right medicine to cure anthrax infection - at around 7% of the cost of the dangerous drugs our government recommends!
- Take a few simple over-the-counter medicines that can help save

your life - by allowing you to take powerful anthrax medications even if you're allergic to them

- Use these 5 common-sense procedures, plus some ordinary, inexpensive home- improvement supplies, to help prevent anthrax infection in the first place
- Build your own simple, safe, and legal treatment device that can help eliminate smallpox from your body - but you won't find it in any hospital or doctor's office
- Reduce your likelihood of being infected (or of infecting others) in the event of any biological attack - but especially smallpox
- Prevent smallpox infection using a safe, natural vaccine that doesn't pose the dangers of the one our government's forcing on our soldiers and sailors

Also, in *The War at Home*, I'll share with you an easy-to-read, comprehensive report on surviving not only biological, but also chemical and nuclear weapons attacks - penned by a retired U.S. military munitions expert. This eye-opening resource debunks many of the mainstream myths associated with possible terrorist actions - by examining some actual scenarios from recent history in which bio-terror and chemical agents were deployed...

Which brings me to my next point: Even though a bio-terror attack is probably the most likely scenario, future terrorist acts on these shores may well involve weapons of a wholly different stripe...

Beyond biology: Combating the 'test tube' terror toxins

In *The War at Home: 25 Weapons to Guard Yourself Against Bioterrorism and Other Threats* you'll also discover the real dangers of a chemical terror attack - the unabridged realities they'll never show you on TV, like:

- How to identify the special atmospheric conditions chemical weapons need to work effectively - helping you avoid likely attack spots before you're exposed
- The 6 telltale scents that signal the presence of the most common airborne chemical weapons and nerve agents
- Detecting the symptoms of chemical weapon and nerve agent exposure in yourself and your loved ones - and what to do to save yourselves
- The 3 simple steps to minimizing the danger to yourself and those around you in the event of a chemical attack - regardless of which toxic agent is used
- And more, including a section on the absolutely unthinkable...

The greatest fear of all mankind

That's why my War at Home report will tell you the stark realities of surviving that worst imaginable nightmare those terrorist dogs could ever dream of unleashing: A nuclear attack on U.S. soil.

You'll hear from an expert about the anatomy of a nuclear blast, what to expect and avoid once the mushroom cloud appears on the horizon - plus some simple, common sense techniques for minimizing danger from the initial blast and pair of shock waves, radiation poisoning, and the EMP (electromagnetic pulse).

And even though a nuclear attack may still be beyond the practical and logistical reach of terrorists and their ilk (thank God), a much more imminent threat are the...

Everyday killers: Our deadly enemies that have no faces or flags...

Think about it: The realm of biological terror isn't limited to the overt acts of terrorists - there are deadly toxins and diseases all around us, every day, that can sicken, incapacitate, or kill us by the thousands. Some of these have been on the rise for years, and new ones (like Hong Kong's SARS epidemic) are springing up at an alarming rate...

But in *The War at Home: 25 Weapons to Guard Yourself Against Bioterrorism and Other Threats*, I'll show you how you can:

- Avoid the deadly West Nile virus in 3 easy ways - plus a safe solution that could eradicate it for good, one our cumbersome government hasn't yet put in place
- Safeguard yourself from the rapidly growing threat of tuberculosis infection at times when you're most vulnerable - on commercial airplanes
- Reduce your risk of contracting the scary new SARS virus that's killed hundreds in Asia, Canada, and Australia.
- Dodge the food contamination that's rampant in supermarkets using 5 common-sense techniques - including one super-cheap way to kill bacteria in all meats
- Use these six techniques - including one natural berry extract that fights ten types of flu - to optimize your immunity against all types of infections

Yes, these and other techniques in *The War at Home: 25 Weapons to Guard Yourself Against Bioterrorism and Other Threats* can help you hold down the home front in the intense bio-warfare of everyday life - while also keeping you as safe as possible from terrorists' tools of destruction...

Because this information is so timely and relevant right now, I want you to be able to get all these lifesaving solutions at a special introductory price - and at NO RISK TO YOU. That's possible because of my 'Ultimate

Guarantee,' a non-negotiable promise of quality that backs everything I write or endorse.

You risk nothing by learning these tactics of defensive bio-warfare, but perhaps everything if you don't...

The only way I can be sure you'll take my advice to heart is if there's absolutely no risk to you. That's what my 'Ultimate Guarantee' means: Your 100% satisfaction or you pay nothing. Think of it as a contract between us that binds my reputation as a healer to your good health...

And as certain as I am that my new War at Home report will help you stay safer and healthier in the face of the unthinkable - and the mainstream's misinformation - I still don't want you to risk a penny by trying it. Order it now, and if you're not satisfied with it for any reason, just return it at any time for a complete refund - including your original shipping and handling. It's that simple.

Right now, I'm making The War at Home: 25 Weapons to Guard Yourself Against Bioterrorism and Other Threats available for less than the cost of a few rolls of duct tape. Get your own copy of the brand-new special report today - and keep it for as long as you like, risk-free. Read it. Circulate it among your friends. Challenge your doctor with the facts in it.

The things you tell them may just save their lives...
Your terror-proof 'bunker' of good health,
William Campbell Douglass II, M.D.

P.S. Remember, a lot of the mainstream's advice about terrorism and disease is designed to keep people under control - not prevent them from injury, infection, and death. Learn all their 'dirty little secrets' in my new report, risk-free - and protect yourself (and those you love) from their

deadly misinformation, guaranteed.

Don't live in fear anymore - that's what terrorists want! Take charge of shielding yourself from their hatred, and from their instruments of destruction...
