

Election Year Emergency Survival Kit -- FREE

Overtime? Lawsuits? Internet Access? Paperwork? Gay Marriage? Vietnam Service? Stem Cell Research? 527 Groups?

That's what our presidential hopefuls spend all their time fussing about...while they ignore the **rabid lion** waiting to spring out of the closet and devour America.

Don't Listen to a Damn Thing They Say!

**Two Ambitious Candidates + Two Misleading Platforms
= ONE RESULT:**

**TOTAL ECONOMIC DISASTER
FOR YOU AND YOUR
CHILDREN**

Dear Imperiled Investor,

We both know the race can only get uglier.

The domestic policy debate has just ended. The little foreign policy chat's over too. And so the campaigns run at the speed of sound right now.

Bad news: This year -- and for many, many more to come -- your ballot may as well be a piece of toilet paper!

It doesn't matter who eventually buys this election...*the country is destined to go bust no matter who sits in the Oval Office.*

That's because America stands on the verge of a deep political chasm of fiery bankruptcy and economic despair...and no one has the cojones to step up and address the problem directly.

This coming train wreck could obliterate stock portfolios, crush home values, and decimate savings funds...and at present, it can't be stopped!

Every politician knows what's coming. They're just too cowardly to tell you the truth.

Would **you** vote for someone who told you:

- **'Your neighbor will go bankrupt from credit card debt and lose his job to someone in India'**
- **'Sadakazu Tanigaki, the Japanese central banker, owns the keys to your house'**
- **'Your children and grandchildren will wear the yoke of poverty from this generation's reckless choices'**
- **'The markets will crash, wiping out more wealth than the Great Blowup of 1929'**
- **'The era of American supremacy will crumble in less than a lifetime'?**

Of course you wouldn't vote for someone who said those things.

In fact, the Democratic and Republican parties would instantly ditch anyone who said the above truths...even though the Dems and Reps caused this miserable debacle that we'll pay for...as will our children.

The first massive problem our great parties have created for us is the lurching debt bubble.

The U.S. government, corporations, and Joe America have all borrowed *far* beyond their means, making promises there's no possible way they can keep.

- **The U.S. government operates with a \$521 billion deficit**...and that figure doesn't even take into account the past and future costs of Iraq
- **U.S. Treasury debt is a whopping \$7 trillion, or 70% of GDP**
- Americans themselves are in debt to the tune of \$9.5 trillion.
That's \$30,594.65 for every man, woman, and child in the country.

Go down the street ask 6-year-old Jimmy Nelson, 'Where's that \$31,000?? Quit riding that bike and start working, boy!'

Sounds terrible. But that's the situation that our politicians have put us -- and Jimmy -- in.

But does anyone care that we drown in debt? Not officially. That's for sure...

As quick proof of how little the two candidates care about the vicious debt problem, just search their Web sites for the word 'debt'...George Bush's Web site brings up a mere 47 documents. Most of them

describe Afghan or Iraqi debt...But if you search for the word 'terror,' you'll reveal 468 documents!

Kerry's site brings up 153 mentions of the word...but offers *no solutions* to the problem.

Here's a solution: for today only, I will give you my new ***Election Year Emergency Kit*** absolutely **FREE**. It tells you how to protect yourself, your family, your house, and your wealth from the impending economic disaster. More importantly, it gives you 7 ways to profit...even if everything around you burns in the incinerator of bankruptcy.

On top of your **FREE** e-report, *I am offering my monthly investment service for a deep discount*. I want to give you this **FREE** e-report and this huge discount on my service because this information is too priceless for you not to have. Now, back to the problem at hand...

First, this debt problem has far greater implications than anyone in a generation might have ever imagined. There are those who try to lily-coat the problem by suggesting that one man's debt is another man's asset.

Well, one American's debt is another American's asset, right?

WRONG! China and Japan own the majority of American debt.

- The U.S. Federal Reserve owns a total of \$675 billion in U.S. Treasury securities.
- The Bank of Japan owns \$689 billion in U.S. Treasury securities
- The other central banks in Asia own \$329 billion in U.S.

Treasury securities.

That's right -- Japan and the rest of Asia own 150.8% of the Treasury debt that our own government owns. In addition to that, Asian central banks own over \$2 trillion in dollars and hundreds of billions more in U.S. bonds.

So the Federal Reserve is a funnel that shoots American tax dollars right into the coffers of Asia!

The Smoking Gun -- Why Asia Will Crush the Dollar

The Fed no longer matters in this scenario. It's terrifying: Foreign countries that own the majority of U.S. debt and dollar reserves control the monetary policies and interest rates of the United States!

And this nightmare's urgent: *35% of U.S. Treasury debt has a maturity date of less than one year!* So any tiny rise in interest rates makes it instantly more expensive for the government to keep on its unstoppable borrowing course. And so the exorbitant interest expense of the federal budget will skyrocket right past its present historic high of 20%.

No worries, right -- because why would these Asian powerhouses want to see their humongous dollar assets fall?

Simple: Asian central banks will allow the dollar to fall to contain Asian inflation.

All of Asia is expanding rapidly: China's GDP growth is widely

known. But you may not know that Japan's GDP is growing by 6%, Singapore's by 7%, and South Korea's by 5.2%. This massive growth is inflationary. And inflation could surely halt their breakneck GDP growth.

But the best way to fight inflation is to boost your currency's value. Value against the dollar, that is...

And so in this ghastly scenario, they'll start to buy fewer dollars. And if that doesn't completely eradicate the Asian currencies' inflation, then the Asian countries will start selling off their dollars...or trading them for commodities. And if that doesn't do the trick, then they start selling off their U.S. bonds, forcing U.S. interest rates up and the dollar down.

As I've already said: The government-pampered Fed is impotent. They are powerless to control America's own monetary policies!

What Will Happen Next: How the U.S. Government Is About to Shatter the Financial Future of Millions of Americans

Allow me to introduce myself. My name is Daniel Denning, and I'm the editor in chief of **Strategic Investment**, the remarkably accurate financial advisory that has been helping investors profit during both up and down markets since 1984.

The period we're about to enter -- a direct

'I ended up making four times my original investment. Just wish I had a few more of the contracts and waited a few days longer to cash out.'

result of the treasonous actions of our own government -- is likely to be as dire as any in our nation's financial history. What can investors expect over the next few months as the bubbles begin to burst...and our financial system begins to implode?

But hey, who's complaining when the profit margin is 300%? I can easily say that I have made a ton of money this year in the stock market.'

-- M. Mansfield

First...I need to tell you what has **already happened**. The news I bring you may be a bit unsettling...but it's absolutely necessary in order to understand the full impact of the disaster that looms.

The fiscal position of the United States is ***much worse*** than anyone suspects -- and this is the case at three levels: personal, corporate, and federal.

Individual investors are about to get clobbered. Rising interest rates -- caused primarily by our own government's betrayals -- will burst the enormous housing bubble that has created so much artificial wealth in our country. Imagine your neighbor's surprise when -- in just a matter of days -- his home's value has fallen by more than 50%...his retirement account has plummeted thanks to a stock market collapse...and his interest payments have doubled, thanks to that adjustable-rate mortgage he used to refinance his home.

Corporate America has already seen what can happen to debt-riddled companies in down cycles. The coming bear market in stocks -- which will take place soon after the housing market begins to collapse -- virtually guarantees that corporations will have to deal with higher borrowing costs...and lower profits. That means those corporations overloaded with debt -- and there are thousands -- will

begin defaulting and be forced to shut their doors...If you thought the Enron 'scandal' was bad -- this scenario will be exponentially worse; imagine if a thousand Enrons went bankrupt overnight. Literally thousands of companies would be forced to close their doors, leaving hundreds of thousands of unsuspecting employees scrambling for jobs and unemployment benefits.

At the **federal level** is the biggest bombshell of them all: the financial destruction of the U.S. dollar. As I'll explain in just a moment, the fact of the matter is that foreign interests now own more than 50% of U.S. Treasurys. So the United States is - for all practical purposes -- at the mercy of these nations.

'Japan invested a record \$32 billion buying U.S. Treasury bonds in January, according to new figures from the U.S. Department of the Treasury...Reliance on foreign investors leaves the United States vulnerable to changes of policy in Japan, China or the UK, the main holders of U.S. Treasurys.'

What will happen next is that these foreign nations -- particularly Japan and China -- will begin 'getting out' of the U.S. dollar. They may do so simply because they need to trade their financial reserves for 'real' assets...Or their bailing out on the U.S. dollar may come in response to some terrorist act that sends the oil market reeling.

But no matter if it happens over the course of several months -- or in the span of just a few days -- it's going to happen: Foreign nations will soon begin dumping U.S. Treasurys. That much is now certain...and the results will be disastrous.

Interest rates will rise at a much faster pace

-- *The (London) Times*, March 16, 2004

than anyone imagined. Homeowners -- especially those who have grown used to borrowing against their home -- will lose their shirts. And the U.S. stock market will take a nose dive of historic proportions.

But again, here's the thing to remember about the importance -- and immediacy -- of the problem in the United States right now:

Over 35% of U.S. Treasury debt has a maturity date of less than one year.

That means any rise in interest rates makes it almost instantly more expensive for the government to borrow money. Bottom line: The interest expense of the federal budget -- already more than 20% -- is about to skyrocket.

As I said earlier...the financial future for the United States is anything but bright.

Higher interest rates can be expected virtually any day...effectively shutting off the credit supply for thousands of American homeowners who have become addicted to the refinancing game of the past few years. You might think that the upcoming presidential election might help prevent a full-blown catastrophe. But the truth is the election comes at the worst possible time for the U.S. investor.

That's because no matter who ultimately wins office in November, their first year will likely be spent administering a much-needed dose of 'medicine' to the federal deficit...and that means only more bad news for investors in 2005. So just how did we wind up in this

nightmare scenario? Who is to blame and what can be done about it?

I'd like to send you the answers to those questions -- along with specific, actionable investment advice with triple-digit profit potential - in my new **FREE** e-report, ***Election Year Emergency Kit: Seven Things You Need to Do to Save Your Assets in the Wake of the Election.*** Find out at the end of this letter how to get your copy today. In the meantime, let me tell you about...

An Act of Treason: How the U.S. Government Sold out its Own Citizens...And for What Purpose?

Never before has an American government been as irresponsible with your money as this one now. And no Federal Reserve has done more to undermine your standard of living than this Federal Reserve has. They're complicit allies in crushing the future economic prosperity of America.

The end result of this **betrayal of the American investor** is that the assets of this great nation have been secretly -- and deliberately -- squandered away by reckless politicians. The vision shared for this nation by men such as Washington, Jefferson and Lincoln has been sold down the river.

And for what purpose? What exactly has this unchecked spending bought for the average American?

Absolutely nothing.

The government has borrowed beyond its means and spent even further...all simply to support the spending urges of politicians concerned only with their own well-being. It's the ultimate betrayal of American trust: Our government has made promises it can't keep - and probably never intended to.

Now, of course, this is nothing new for governments. In fact, the U.S. government has been exploding the deficit at its discretion for nearly 200 years. (See box below.)

The Cost of War to the American Taxpayer

Just how costly might the Bush administration's 'war on terror' be to the American taxpayer? A look back through history shows that each time the nation has gone to war, the federal deficit has exploded. With projections from Bush's own Cabinet members suggesting that this 'war on terror' could last 'decades'...it becomes clear that the cost could be staggering to the U.S. homeowner.

- President James Madison inherited a federal deficit of \$57 million when he took office in 1809. By 1816 -- due largely to increased borrowing to fund the War of 1812 -- that deficit stood at **\$127 million**. It would take the nation 20 years to bring that deficit back down to 1809 levels again.
- President James K. Polk inherited a debt of just \$16 million when he became president in 1845. Polk's desire to expand the nation led to the Mexican War in 1846-47...and left the nation with a **\$63 million** debt by 1848.
- The Civil War exploded the federal deficit, with the nation's debt level rising from **\$75 million in March 1861 to \$2.8 billion by August 1865**.
- During President Woodrow Wilson's administration, the United States entered into World War I. Beginning in April 1917, the federal **deficit**

rose from \$3 billion to \$26 billion in a period of just 24 months.

- World War II saw the deficit increase from **\$72 billion** (a figure reached primarily due to Roosevelt's New Deal policies) to **\$260 billion** by the time it had ended.
- The Cold War took an enormous toll on the deficit as well, rising to a staggering **\$2.7 trillion** by the time Ronald Reagan left office in 1988.
- The federal deficit currently stands at **\$6.9 trillion** (as of Jan. 1, 2004.) Given the enormous cost of the continuing efforts in Iraq - as well as the 'war on terror' as a whole - it's likely that the U.S. federal deficit could eclipse the \$10 trillion mark before the end of 2008.

(Source: Trask, H.A. Scott, 'Perpetual Debt: From the British Empire to the American Hegemon')

But the difference this time is that the government-coddled Fed has made borrowing money and using leverage so cheap that there is virtually no sense of risk in the market. No risk of taking on debt. No risk of buying too high. ***And absolutely no sense of risk that the whole financial economy might soon fall apart.***

Simply put, the treasonous actions of the United States government have placed this nation on the brink of financial disaster.

How did we get in this position?

Three specific 'sellouts' of the American investor -- caused by reckless policymaking of historic proportions -- have threatened to place all of us in harm's way... click below learn more...
