

The ultimate secret of Professional Investors -

How to take control of moneymaking opportunities days, weeks -- and even months -- before they happen...

...and lock in year round gains of 35%, 50%...even 120%.

Dear Friend,

If you knew there was a book retailer's stock that gains an average of 50% every August and 48% every December...

If you knew about a takeover play that's jumped 58% every January for the last four years...

Or a small health technology company that's gained 35% every February for the last six years...

Or a shoe retailer that's shot up 12% every May for 8 of the last 9 years...

Or a sportswear maker that's gone up 20% for four years - and just jumped 120%!

Or, a clothing chain for oversized teens that's soared 32% for the last five years...

...you'd buy these stocks, wouldn't you? Well, that's the ultimate secret of professionals. They use

Cycle research to make money year-round

... they look for stocks and stock market patterns, like the Seasonal Stocks I've listed here. These are stocks that have a proven, cyclical track record.

In other words, they look for stocks you can bank on for year round profits.

Once a professional knows which stocks will move and when, all they have to do to make money is invest ahead of that move!

These "bankable" stocks are the ultimate secret of professional investors. And, Cycle Research - like Seasonal Stocks - is their key to finding these hidden gems.

Effortless moneymaking opportunities for you!

The beauty of using a recurring pattern that's been tested and proven over time, is it will be there for you like clockwork.

For example, one of the most celebrated of seasonal patterns in the stock market is the January Effect.

The stock market has gained value in more than two-thirds of the Januaries since 1926. In other words, for almost 80 years you could "take it to the bank" that stocks make money in most Januaries.

What's more, this pattern is not confined to US markets. Markets around the world exhibit the January effect.

In fact, numerous academic studies have confirmed that many stocks, like small caps, achieve 50% of their growth for the entire year in the first month alone.

Academic Studies Prove Cycle Research Works

In 1942, Frederick Wachtel wrote the first academic study documenting the January effect on stocks.

Years later, Rozeff and Kinney reintroduced the January effect to modern finance, and Keim reported that virtually all of the return advantage that small-company stocks hold over large-company stocks is earned in the first four trading days of January.

One example of the January effect on a stock is MIM Corp.

This company supplies drugs to HMO members and others along with a variety of clinical management expertise. And, every year for the last 4 years it has had a 58% average gain. That means that if you had put \$10,000 in this stock you would have \$15,800 in short order.

But that's only the beginning! There are a host of other seasonal patterns that have been studied by professionals and academics:

→ A study published this year by the Federal Reserve Board of Atlanta produced compelling evidence that seasonal patterns turned up in the stock exchanges of nine different countries.

→ Studies by Lakonishok and Levi in 1982 and Smirlock and Starks in 1986 also concluded that certain seasonal and cycle patterns did impact stocks.

One study recognized a total of...

181 Seasonal Patterns

A few of the most profitable patterns professionals follow include:

- ▶ The 6-month cycle. The first half of the year tends to bring better returns than the second half.
- ▶ Dogs of the Dow. Dow Jones Industrial Average (DJIA) stocks whose price was beaten down in the previous year have a tendency to outperform the rest of the DJIA in the following year.
- ▶ 28 day trading cycle. Many market researchers have demonstrated the force of this cycle. It appears to be tied to the cycles of the moon and can signal a reversal of trend.
- ▶ Seasonal Affective Disorder (SAD). Markets in both the northern and southern hemispheres predictably succumb to the winter blues.

Of course, to take control of any of these patterns and make money with them, you have to find stocks that are actually powered by them and will reward your investment.

Without that, the January Effect and all the others will come and go and you'll have nothing to show for it.

"While investment trends come and go, the yearly financial and psychological milestones stay pretty much the same. The trick is to get some idea of the market effects of these dates, and take advantage of them."

-- From Stockwarrants.com

"Certain individual stocks follow predictable patterns, as stocks prices in specific sectors of the economy do."

-- article from Path to Investing

In the markets, many major patterns recur. One is the 116-month long period from the last business cycle in the "old" era of inflation to the climax of the great financial bubble. There have been six since 1720 .

--From the PrudentBear

... "it's interesting to look back at the past year and see so many market patterns repeating themselves. It's such a reassuring feeling when the market does what you think it might do.

--From The Stocktraders Almanac

Imagine though...

...what it would be like to have a roadmap to an entire year of hot stocks.

Not just those stocks driven by the January effect - but every compelling opportunity inspired by all of the 181 repeating patterns due to show up this year.

Also imagine knowing, every morning when you wake up, which stocks you'd want to own that day. All spelled out in an easy to understand, step-by-step format designed for fast reading.

In other words, imagine having, at your fingertips, a year's selection of investment ideas that have a demonstrated history of going up like clockwork at a precise time of the

year. It would be like

Shooting fish in a barrel.

For example, suppose you knew...

- ▶ The history of Starbucks (SBUX)...what months to buy and when to sell...
- ▶ When certain Casino stocks come to life...
- ▶ Which stocks routinely rise from "back to school" upsurges in their business...
- ▶ When a specialty pharmacy's stock is likely to take off...
- ▶ When Utility stocks are likely to climb...

In other words, imagine yourself getting up every morning and finding moneymaking opportunities like these waiting for you.

A Blueprint for Profits

Hi, my name is Christian DeHaemer and researching stock market cycles is one of the ways I've made my readers great profits year after year.

Let me give you just a few examples...

At one point, I managed a run of 15 winners out of 16 picks with the likes of Kana Software and Internet Capital Group. During the heyday of the Internet bubble, at one point, my readers saw gains of 176% on Art Technology Group, 91% on Versata, and 206% with Navisite.

Not to mention the 206% and 118% gains with Kana and Internet Capital.

And, because Cycle Research played a big part in helping me discover some of these profitable opportunities, I decided to create all-in-one-place calendar so that you would have all the seasonal patterns for 2005 at your fingertips.

Make-money-all-year-long

When I read your e-mails, one thing I've seen over and over, is that some of you travel, have a busy work schedule or have other reasons that you don't want to be tied down to a reading a regular newsletter.

You wanted something that you could just flip open in the morning, know exactly what to invest in and when, and have the rest of the day free.

Cycle research is the key to that. And, the best way I could think of doing this, is with The Year Of Profits Calendar.

It has all the seasonal and cyclical stocks I will be keeping an eye on this year. And all the ones that warrant you investment time and dollars.

The bottom line is that I think you'll find that I've created the

Easiest way to make money all year long

I say easy because all you have to do is take a look at what investment ideas we recommend that day. Then you just contact your broker and tell them what to do.

That's it!

We've done all the tedious research to find and validate these patterns so that you don't

have to.

What's more, you'll find a brief statement of the "reason why" you can expect to make money on each investment idea right there beside it.

→ For instance in March 2005, your Year of Profits Calendar tells you it's time to buy online jobsite, Monster.com. (MNST: NASDAQ) Seasonal interest in online job searches in mid-March 2003 helped force MNST shares from a low of US\$20 to more than US\$30 in late April.

A neat 50% increase in approximately one month. Which means that if you had put \$10,000 into this stock, by the time you sold you would have had \$15,000!

That's why you'll want to buy shares every mid-March and sell in late April!

Another example...

→ In July 2005 your Year of Profits Calendar tells you to buy gambling and casino stocks as summer vacations kick in. But of course you can't buy just any gaming stocks.

The four companies detailed in your Year of Profits Calendar have a history of returning huge gains for investors. But to make those gains, you'll want to sell shares in August.

→ Another recommendation you'll find in your Year of Profits in Calendar is to buy shares of a certain automotive company on January 21, 2005.

This company's stock price rises an average of 22% every year as people begin repairing and getting their cars ready for warmer climate.

Buying this company means a gain of 22%.

See how easy the Calendar works?

You'll also find that every recommendation is...

About quick profits

That's because the stocks we've included in the Year of Profits Calendar are the very opposite of "Buy & Hold".

Rather, they are typically "In & Out" opportunities. You'll buy and then sell them in days or weeks at the most.

In other words, we've designed the Year of Profits Calendar for fast results. This means...

You can start small and build as you go

You don't need to have a huge bankroll to use this Calendar. You can start with a modest amount of money and then roll over your winnings as you watch them build.

One example: H&R Block (HRB).

This is a great example of a stock that is hit with a predictable surge of buying every year.

What happens is thousands of people have their taxes done by H & R Block every year. And, a percentage of these satisfied customers get the idea that it would be great to own a piece of this obviously successful company.

And so they buy the stock. And that -

Drives up the price every February & March...

Recently, everyone who took advantage of my tip on this stock saw gains of 44%. That means if you put \$5,000 into this stock when I recommended it, you'd have ended up with \$7200.00.

What's more, H & R Block was an "In & Out" trade. We didn't hold it for the long term. And, that's part of the magic of the Calendar.

That's also the kind of Seasonal Stocks you'll find when you open your copy of the Year of Profits Calendar. In all, you'll find a minimum of 2 recommendations every week that you can invest in.

Perhaps the best news of all, though, is that you

Don't have to be an experienced investor to make money with the Calendar

All you have to do is read why you can expect a particular stock to perform well within a brief period of time. Then, just contact your broker and tell them what you want to do.

It's that simple.

You're going to open your Calendar every day anyway. All you have to do, then, is look at your Calendar when you open it -- and see what investment idea we're recommending that day.

This is as close to a "no sweat" investment program as you can get.

Then, once you've told your broker what you want, the only other thing you have to do is flip to the sell-by date which is marked on the calendar.

Once that day comes, all you do is call your broker and tell him it's time to sell. And you're ready to rake in the profits. One, two, three - couldn't be easier. Makes investing a breeze.

The Year of Profits Calendar itself...

...comes to you in an attractive, deluxe 6 x 9, 3-Ring, Black Leather Binder. You can comfortably take it with you anywhere. It is slim enough so that you can fit it in a briefcase, pocket or purse.

Your Binder holds 32 vivid, user-friendly pages printed in 4 colors. Initially, it will cover the period from January thru June. Then the July through December 6 month period.

In addition, with your calendar, you get secured access to The Year of Profits website where we'll update you when we think an "act-on date" of one or more Seasonal Stocks needs to be adjusted.

Plus, on the secure access area of The Year of Profits website, we'll also provide you with other investment ideas and recommendations that are poised to take off.

This way you'll always have the most up-to-date information on your Year of Profits Calendar recommendations along with brand new, emerging opportunities.

The Year of Profits Calendar is a great way to...

Take Away Uncertainty in the Market

The Year Of Profits Calendar reduces investment uncertainty. You'll know in advance exactly what stocks to buy in 2005.

One of the cyclical patterns I uncovered during my research is that years ending in 5

have been up years for The Dow Jones Industrial Average (DJIA) for the last 120 years.

There's never been an exception. Never.

But now consider that the average gain for the DJIA has been around 30%. Some years have been lower. Some higher. But every 5th year of every decade in the last 120 years has been a winner.

The probability, therefore, is extremely high that 2005 year will be an up year for the DJIA.

And, if the DJIA runs true to form and increases by just half its historic average of 30%, it would likely pull the rest of the market up with it.

What that means is that if you have stocks that have historically risen at predictable times of the year, a rising DJIA should act as a kind of insurance policy. In other words, it's a case of: "a rising tide lifts all boats". Which is why...

You'll want to act now...

2005 is just around the corner. So getting a copy of the Year of Profits Calendar is one of the smartest moves you can make.

You'll have at your finger tips 12 months worth of "take it to the bank" money-making opportunities.

You'll also have the same level of information as Wall Street Pros. More importantly, you'll have the same chance to make the same kind of money as some of the most storied professionals do every year.

You'll know their secrets and how to apply them. You'll be one of the lucky few

investors who've gained an edge over everyone else. You won't be left out in the cold wondering what stocks to buy in 2005.

You'll Succeed While Others Fail

Studies of investor failure have shown that the number one reason non-professionals don't make money in the stock market is that they don't have timely access to good investment intelligence.

That won't be you. Your Year of Profits Calendar will give you the same advantage as professional investors. And, with that you should be able to mimic their results!

But, you must hurry, because...

...for obvious reasons we can only make one production run of these unique Calendars. When we are sold out, we're going to be sold out forever.

There's not enough time for a second production run before the end of the year.

Therefore, we can only hope we have enough for everyone who wants one. But, of course, there's no way to know when we will sell our last one. Or, for that matter how many excited buyers we will have to turn away.

The bottom line is: I don't want to be the one who has to say to you, "sorry, you'll have to wait till next year".

Therefore, if you want to be one of the few who can take control of your investments starting in January 1, 2005, you must order your Year of Profits Calendar now and be part of what should be a great investment year!

For the Year of Profits Calendar with all its monthly moneymaking

recommendations as well as the regular website updates, you'd expect to pay at least as much as you would for most of the popular stock market newsletters. Most of those, of course, sell for \$295.00 and up.

And, in future years, we may have to charge you that.

But, because this is a new way for us to offer you our best investment ideas, we'd like to offer you an introductory price...

Just .27 cents buys you 365 days of profitable opportunities

The introductory price for the Year of Profits Calendar and the e-mail updates is just 27¢ a day, or \$99 (with free shipping) for the entire year.

Imagine locking in gains of 35%, 50%...even 120% year round for just 27¢ a day. That's less than it costs, in most places, to park your car at a parking meter for a half-an-hour!

I think that's a pretty good deal. I hope you agree.

And, if you do, please hurry because, as I say, 2005, like all it's counterparts over the last 120 years, promises to be a strong year for the stock market and you won't want to miss out. You especially won't want to miss out on the January effect in a year that should take off right out of the box.

That's also why I expect our supply of calendars will sell fast - because, with that Calendar, you'll have a way to take advantage of...

- ▶ a year that should be an up year;
- ▶ a month (January) that's also likely to be an up month;

- and finally a group of stocks that are recommended in the Calendar that also all have a history of regularly rewarding investors.

In other words, given all the different, high probability cycles coming together in 2005, when you say "Yes" to your copy of the Calendar, you are saying Yes to Easy Street Investing!

One last thought...

Take the change from your pocket. Lay out a quarter and two pennies...

27¢.

What can you buy with 27¢? Not much, right?

Wrong! The Year of Profits Calendar will cost you just .27 cents a day. You probably spend more on a cup of coffee every day!

Yet, that's all it'll take for you to lock in gains of 35%, 50% - or even 120% during what should be the strongest year for stock market moneymaking in this decade.

Kind of a no-brainer, don't you think...

Great! To make sure I can say "Yes" to your order for one of these Calendars, just click here...

Christian DeHaemer
Editor, **Year of Profits Calendar**

P.S. Time is running out. The first investment idea recommended in the Year of Profits Calendar is on January 21, 2005. To take advantage of this moneymaking opportunity, you'll want to make sure you know exactly what to buy. Order your Year of Profits Calendar now.
