If this had been your portfolio, you wouldn't have even noticed the fall in the markets. It would have been just another year of outstanding growth. (Of course, we don't expect our new system to bat a thousand, year after year. But we do expect to bring you recommendations that offer both safety and maximum returns.)

C.A. told me he is frequently amazed how, even when all the markets are dropping, the Momentum stocks seem strangely unaffected. It's as though they enjoy some special protection. We believe this is because they're on the top of institutional investors' buy lists. And that puts them last on everyone's sell list.

In short, Momentum stocks are among the few stocks that tend to go up in a bear market, as investors move money out of riskier stocks and into safer picks.

What Returns You Should Expect From This System

How much money can you make with Momentum Investing? Of course, there

are no guarantees. But the most reasonable estimates come from looking at historical returns. So let's take a brief look at what they show...

The S&P 500 has grown at an average annual rate of 11% since 1926. The original research we started with showed that Momentum stocks, on average, grow by 51% to 58% on top of the S&P-in other words, up to 69% annually. That's enough to turn \$100,000 into over \$1.3 million in just five years.

Our improved system produced a gain of over 110% in a particularly bad year for stocks. If market conditions-and our returns-stay the same for the next five years, that would turn an investment of \$100,000 into just over \$4.8 million.

But we don't expect the downturn to continue for that long, or the markets to keep falling at that rate. Which means the returns from Momentum Investing may be even greater in the future. Remember, Momentum stocks outpace the overall market. So as growth in stock prices rise to their historical levels, the returns on Momentum stocks will rise in step.

A Special Invitation For Serious Investors

As you can see, the system offers us enormous potential to create wealth with lower than average risk. However, using the system effectively requires a little more time and attention than a simple 'buy and hold' strategy.
