

“SUPER STOCKS”

That Never Stop Profiting
This New Trading Tool (That Works
When Stocks Go UP and DOWN)
Could Turn \$5,000 into
\$700,000

Dear Reader,

One small group of investments - that makes up less than 1.6% of the publicly traded stocks on Wall Street - are today's answer to getting effortlessly rich.

Most people don't believe it at first. But I'm going to show you how to take advantage of it personally...and very soon. With amazing results.

You're being let in NOW on this little-known investment strategy that will make the difference between average returns or annualized triple-digit (or better) gains...

Yes, \$5,000 could turn into \$700,000...

Never before could you capitalize on big picture trends and events with such ease, accuracy, safety, and unparalleled profit potential. And when

you couple it with options, the sky's the limit.

We call these investments "**Super Stocks**" because they could soon put mutual fund companies like Fidelity and Putman out of business for good...and make you *24.9% each month* for the rest of your life.

A quick look at our very recent track record, and you'll notice these **Super Stocks** are making gains of **58%, 84%, 88%, 91%, 112%, 120%, and 171%**.

Some subscribers have used them to made **159%, 335%**, and even **603%**.

And there's no sign of the profits slowing down. A recent string of winners included:

- **61% Gains** on IWO calls in six Days...
- **59% Gains** on GOX puts in one Day...
- **18% Gains** on RTH puts in 25 Days...
- **74% Gains** on IWO calls in 29 Days...
- **27% Gains** on BBH calls in 14 Days...
- **36% Gains** on MUT puts in three Days...
- **52% Gains** on DO puts in three Days...
- **15% Gains** on HHH puts in two Days...

Prior to that, we had winners of **84%, 112%, 120%, and 91%**.

Right now, we've got a winning streak that's made **50%, 27%, 14%, and 33%**.

Looking at the enormous amount of positive responses, you can see why Super Stocks are the profit machine of the next decade.

Reader Larry S., who writes in to say,

"I made 81%, 603% and 159%. Thanks for the recommendations and keep up the good work."

Randy B. reports five-figure profits after just 14 days...

"I have been with you all for two weeks now and have made close to \$10,000"

J.A.D. summarizes just how powerful Super Stocks really are...

"Dan, I've been a Strategic Options member for just a short while. So far I've realized \$22,000 in 13 days. As you know, there are other advisers out there charging \$5,000 for their services, and I feel that the service we get from you is as good or better."

In all my years of investment experience, I've never encountered a more powerful strategy for wealth building...

These Super Stocks have it all...

Huge returns, quick gains, exciting trades, and tremendous long-term sustainability.

They're built around a secret trading strategy that works better than anything on Wall Street. In the next five to 10 years, everyone will be trading **Super Stocks**. But right now, only a handful of precocious traders

are using it.

Today you can be among the small few who are "*in the know*."

Be the First to Master the Newest Wall Street Wealth Generator

The secret to **Super Stocks'** success is simple...

Super Stocks are a special group of investment vehicles that "basket together" a group of specific companies in the same market sector...and trade this basket of companies like one single stock.

Playing these baskets of stocks are much safer (and much more profitable) than playing individual stocks.

Not only that, but **Super Stocks** are easy to use, liquid, and they offer diversification, market tracking, low expenses, and even tax efficiency.

Best of all, they allow you quickly and safely to profit off "big-picture ideas" through playing a certain sector, country, or a particularly "hot" asset class like gold, bonds, or emerging market stocks.

Follow my instructions, and you can make returns of **35%, 85%, even 115%...every day...starting with less than \$2,000.**

Let me show you how you could use my **Super Stocks** to make quick, safe profits following long-term trends.

Cherry-Pick the Winners

One of my favorite **Super Stocks** is the **Philadelphia Banking Index (BKX: AMEX)**.

The BKX tracks nothing other than the major banking stocks on Wall Street. Companies like J.P. Morgan, Northern Trust, Wachovia, Bank of America and Citigroup are all held within this basket of stocks.

Playing this basket of banking stocks is a much safer way to profit than pinning your hopes on the performance of one single banking stock.

After all, owning individual stocks puts you at risk to many extraneous factors that can lose you money...like analyst downgrades, surprise earnings forecasts, or even accounting scandals.

Playing baskets of stocks via the BKX is a much quicker and safer way to profit. For instance, when I became bearish on the banking sector, I didn't recommend shorting all the major banking stocks. And I didn't recommend buying puts options on them, either. Instead, I recommended buying one single option on the Philly Banking Index.

And the result was incredible...

Over the next month, the banking index oscillated up and down. Some stocks rallied...other stocks fell. But like I said, the movements of the individual stocks didn't matter. Because as long as the overall banking index was falling, we were making money.

In fact, these BKX puts gained 84% in 31 days.

After that winner, I knew these **Super Stocks** could make tremendous profits in a very safe and consistent matter. So I made a list of all the **Super Stocks** trading on the market and tracked their performance.

Whenever their longer-term trend lines indicated a quick profit opportunity, I bought puts or calls on the "basket" of stocks poised to make the most money off the pending move...and the results were more often than not good. How good?

Using this **Super Stock** trading strategy, I went on to make **51% in 27 days...88% in one day, 120% in 11 days, 113% in six days, 91% in three days, and 37% in 13 days.**

That's enough to turn \$10,000 into \$348,089.57 in 60 days time!

Based off this success, the **Super Stock** trading system was born.

- First, I identify the big market trends...ones that are reaching inflection points or tipping points.
- Then, using a chart study of longer-term moving averages, I forecast the next seven to 10 day move within the index.
After that, I choose the Super Stock that stands to gain the most if this forecast comes true.
- If everything adds up to a fast profit opportunity, I'll then send you an instant e-mail recommending the exact put or call option that'll make you the most money.

Your job is easy. All you have to do is read the alert and place the trade. All told, it'll take you no more than five minutes a day to make gains of **51%, 113%, or even 603%**. Best of all, you'll make these profits no matter if the market's rising or falling!

But that's not all. This system offers you extremely limited risk...

You see, **Super Stocks** are so powerful, you only need to invest a small portion of your portfolio to make sizable profits.

You can put as little as 10% of your funds in these strategically leveraged, fixed-risk investments, yet still be on your way to total financial freedom. You can earn substantial returns that over time can add up to millions of dollars - all while knowing that 90% of your money is tucked away in risk-controlled, highly potent investments.

When you think about the quick gains we've taken, you can see just how powerful the system really is. Gains like...

- **120% Gains** in 11 trading days...
- **112% Gains** in five trading days...
- **91% Gains** in two trading days...
- **88% Gains** in 11 trading days...
- **84% Gains** in 22 trading days...
- **58% Gains** in three trading days...

Today, I'd like you to make these profits. With this special offer, you can sign up to receive these profitable ***Strategic Options Alert*** recommendations, featuring my new **Super Stocks** for **FREE**.

But before I tell you how to do that, let me introduce myself...

A Regime Change on Wall Street

My name is Daniel Denning...

I'm the lead editor of ***Strategic Investment***, a monthly financial

publication that's been in circulation for over 19 years. Before that, I founded and edited a monthly tip-sheet on the best small-cap growth stocks in America. In both roles, my job is to tell YOU the big themes moving markets and pick which stocks have the most to win and lose.

Looking back, those who followed my advice have done quite well.

- ✓ **In 2001, I had 10 winners out of 12 recommendations.**
Our average gain was 9.2%, including dividends. My two losing positions each fell less than 1%.
- ✓ **In 2002, I averaged 18.95% on all my closed positions.**
That's a two-year average gain of 14% while the Dow lost 7.1%, the S&P 500 lost 13%, and the Nasdaq lost 21%.
- ✓ **In 2003, I closed 11 positions for average profits of 17.9%.**

I'll put those results up to the very best money managers on Wall Street. But while the advice I gave in *Strategic Investment* is good, there's no reason why clear-eyed traders with an appetite for calculated risk can't, as the famous chef in New Orleans says, "kick it up a notch." And I think I've found the perfect way to do it.

That's why this new **Super Stock** strategy is so powerful. Most people you talk to believe you can't make fast, safe profits simply by following long-term trends. But they're wrong! (That's probably why these people aren't making the kind of money we're making!)

In fact, let me illustrate the tremendous moneymaking power this new strategy could offer you.

The Story of Two Investors

Let's say there are two investors...

Investor "A" is 45 years old. He wants a safe investment that would build for his retirement, which he figures is 22 years away. So he takes his \$50,000 and puts it in 5%- yield tax-free bonds. Assuming he reinvests his interest, he'll watch his \$50,000 grow into \$146,263 by the time he's 67.

Not bad, right?

Investor "B" takes a slightly different approach. Since he also wants to build his retirement savings, he invests in 5% tax-free bonds. But unlike Investor "A," he commits 10% of his portfolio, a total of \$5,000, to trade my **Super Stocks** , where he invests in my highly leveraged, controlled-risk investments with a 24.9% yield.

By the time Investor "B" is ready to retire in 22 years, his \$45,000 in tax-free bonds had netted him \$131,636.73. Add to that an annualized 24.9% return, and his \$5,000 invested in Super Stocks would earn an eye-popping \$665,799.78. His total return is now \$797,436.51, nearly 5.45 times that of Investor "A!"

I'll admit, this calculation left out a few things. Taxes are one of them. There's also the risk that an occasional trade might hit get stopped. Still, you get the point: A little bit of money carefully invested could make a lot more than a large sum of money invested at a low rate of return.

Did you ever think you could make upward of \$700,000 starting with just \$5,000?

You can!

And the best news is that you don't have to lay out a large amount of your hard-earned savings to succeed. As you've just seen, it takes as little as \$5,000, or 10% of your portfolio, and five minutes out of your day to get started!

Why “Super Stocks” are Better than Any Other Investment Today

By Dan Denning

Each “Super Stock” represents a basket of securities designed to track a specific market index. Whether that's a stock index, a bond market index, a stock sector index, or an international index, these baskets all trade like a single stock. This unique combination presents many benefits, including tax efficiency, lower costs, transparency, buying and selling flexibility, all day tracking and trading, and diversification.

Plus...

- ✓ They're better than trading an index (like the Dow or the Nasdaq) because they're more targeted. Why play the entire Nasdaq when you only want to short the semiconductor companies? With Super Stocks, you have this ability!
- ✓ They're safer than picking a single stock because they're not subject to earnings announcements, accounting scandals, or analyst downgrades. With Super Stocks, the protection of the entire basket of companies negates any extraneous market factors that pose threats to single stock ownership.
- ✓ They're better than Mutual funds because they're more easily traded, have lower fees, and the profits go straight to you (instead of some corrupt fund manager)

When you supercharge these benefits with the power and leverage of options, you can see why trading Super Stocks represents the newest wealth generator on Wall Street.

90 Safer Ways to Profit

Right now, there are over 90 different **Super Stocks** on the market...all focusing on ultra-specific market baskets that could offer you big returns in a short period of time.

In fact, you can virtually zero in on any sector you want.

Whether it's a basket of oil stocks, a basket of Dow Jones utility stocks, a basket of stocks in fast-growing Asian markets, a basket of Internet blue chips, a basket of technology stocks, a basket of gold stocks, or even a basket of small cap stocks, your range is virtually limitless.

This remarkable amount of variety and leverage is a unique combination that's never been offered before.

Finally, you can use "big-picture" ideas for massive short-term profits. That's the power of Super Stocks!

When you combine the massive amount of investing variety with the leverage and safety **Super Stocks** offer, you'll soon witness the tremendous moneymaking power this simple investing strategy offers you.

We're concentrating on the big trends, that move markets up and down in a few days. When we're right, our gains are staggering. When we're wrong, we tend to lose very little. This strategy puts these powerful techniques at your fingertips so you can make big-money moves without all the risks.

Let me give you a real-life example...

61% Gains in Just 6 Days

Our recent pick on the **Russell 2000 Small Cap Growth Index (IWO: AMEX)** is a good example of maximizing your upside and limiting your downside in one single **Super Stock**.

On June 10, 2003, the overall market was showing remarkable signs of strength.

By any reasonable account, I knew that valuations, economic fundamentals, and stock values shouldn't be rising. But the biggest influence on investment values is investor sentiment...and that was bullish.

So I told *Strategic Options Alert* readers that "if" the economy is recovering, small-cap stocks should continue to lead the broader indexes up. And the best ways to play the movements of the entire small-cap sector is through the **Super Stock** called the Russell 2000 Growth Index (IWO: AMEX).

My readers were able to buy IWO August 45 Calls under \$3.50 per contract, with a \$5.00 upside price target. And on July 9, 2003, the calls exceeded our target price, trading between \$5.70 and \$6 per contract, and **we were able to gains between 62% and 71%.**

50% Gains in Just 8 Days

Prior to that, on July 1, 2003, I noticed there was a massive bubble in the bond market.

It was easy to see why...

The perceived risk in stocks, combined with the Fed's "easy money" policy, was pushing bond prices too high too fast. I knew that as soon as the markets looked better (or interest rates rose), bonds would come crashing down.

Typically, the only way you can profit off this is by shorting T-bonds. But honestly, who wants to go through the trouble (or risk) of doing that?

To most, bonds represent an opportunity that you're essentially locked out of. After all, bonds are typically something you buy for 30 years...not something you trade for 30 *days*. Even though bonds have become such a critical part of the markets and capital flows, they've never been trader tools.

But they are now...

We knew about a **Super Stock** called IEF, which tracked the movements of 7-and 10-year Bonds. And we knew it would pay a handsome return once the bond market began to sell off. So I recommended my readers pay just \$2.20 on IEF puts options, and just eight days later the bond bubble burst as we expected, **and we were able to cash out with a quick 50% return.**

Right there, that's two plays...14 days...and 101% in profits.

In addition to these gains, we also played a biotech **Super Stock** for 27% in 14 days, a retail **Super Stock** for 33% in three days, a gold **Super Stock** for 59% in one day, and even a **Super Stock** that tracked the top-10 dividend-paying stocks on the Dow that gained 36% in six days.

Needless to say, there are a lot of happy *Strategic Options Alert* readers, like Fred F., who writes...

"Hi Dan, purchased 20 at \$1.40 and just sold for \$1.95 - with Fidelity commissions, this gave me a 35% profit over a few days. Not bad! I await your next pick. Keep up the good calls!"

Or Russ C., who confirms the recent winners...

"In at \$1.30, out at \$1.80. I made a 50% profit in 2 days."

Or J. Kean, who wishes alerts came more often...

"Bought 20 contracts at \$1.50. Today sold them at \$1.85. Gross income of \$700 isn't bad. Thanks a lot! Enjoying the content of your letters, wish they were more frequent!"
