## **You Could Make \$11,000 in as Little as Two Hours...Just by Trading Wall Street's Biggest Winners and Losers!**

**My System Can Make You 3.5 Times Your Money in Just 7 Days.**

**In fact, I guarantee you'll make money... or I'll give you your money back!**

Dear Reader,

You're about to discover a system that tells you what stocks are ready to move 15%, 25% or 45% even before the top Wall Street traders know themselves.

In just the last three months, this system generated 17 picks -- 15 of them were

<b>\$525 profit on my first trade</b>
---------------------------------------

winners. That's an 88% accuracy rate. I call this moneymaking machine my MST System.

*'This is too easy. My first trade... five days, \$525 profit. Keep 'em coming.'*

--MST Trader 'Happy'

The MST System uses three of the market's most trusted indicators to spot stocks on the verge of a powerful move. When all three indicators move in the same direction at the same time, you are on your way to making 3.5 times more money than the best Wall Street traders - up to 88% of the time.

Take a look at the chart below and note the difference between the 'Stock Gain' and the 'MST Gain.' With my MST System, you can be making 3, 6, 7, 11, and even 20 times more money than most stock traders!

Company	Stock Gain	MST Gain	MST Profit Multiplier
Benchmark Electronics	7.47%	55%	7.36x more money
The Cheesecake Factory	4.20%	31%	7.38x more money
Gilead Sciences	12.10%	74%	6.12x more money
eBay	9.21%	102%	11.07x more money
NetIQ	7.38%	65%	8.81x more money
3M Corp.	2.38%	48%	20.17x more money
Intel Corp.	7.55%	68%	9x more money

Just imagine turning a 4.65% gain into a **15% gain**...a 4.2% gain into a **31% gain**...a 7.47% gain into a **55% gain**...and even a 9.21% gain into a **102% gain**.

The secret is investing in what I call 'Triple-Play' stocks...

Using only the information contained in this report, you'll learn how these proven Triple Play formations can make you 43% every seven days...which averages out to **3.5 times more money than even the best stock traders on Wall Street** .

**Guaranteed...or your money back.**

Best of all, you can make these kinds of gains in as little as seven minutes a week for as long as you wish.

In fact, I'm so sure you will make money hand over fist, I'll pay you if I'm wrong!! But first, you need to understand how these Triple Plays work...

## **Turn \$10,000 Into \$704,916**

Imagine if you could predict with relative certainty which way a stock would trade -- up or down. You could make a ton of money -- in any market.

You would buy call options on the stocks that were about to rise. And you would buy put options on the stocks about to fall. Simple as that. And in no time, you'd amass a fortune.

Using my *MST System*, you can do just that...amass a fortune by following three of the market's most trusted technical indicators: **Momentum, Strength and Trend**.

Over the last two years-plus, I noticed that every time a stock popped up, all three indicators headed upwards just before the stock rallied. That's what I

**Made 68% in two days!**

*'Yesterday I bought Intel*

call a bullish Triple Play. And every time a stock plunged, all three indicators turned down just before the big sell-off happened. That's a bearish Triple Play.

If you followed these Triple Plays over the course of a few months, you could easily turn \$5,000 into \$17,500...\$15,000 into \$52,500...or even \$50,000 into \$175,000.

*calls at 1.90 and sold them this morning at 3.30 at open. I am thrilled. Keep up the good work and thanks a lot. I am as excited as you are about it.'*

-- MST trader J.M.

Let me show you how to use this information to make yourself 3.5 times more money than the best Wall Street stock traders...starting with Momentum.

## Part One of a Triple Play: Momentum

What does it mean to have Momentum on your side?

Simple.

It means everything is clicking. Earnings are up. Insiders are buying. The media is putting a positive spin on the stock. Sales are shooting through the roof. The stock is unstoppable.

This should be the first thing you look for when you trade. When you go long, you want your stock to rise with a purpose. And if you think a stock is about to plunge, you want that stock to tank quickly. In other words, you want Momentum on your side -- no matter if the stock is moving up or down.

**Professional traders agree...and that's why they use what's**

**called a slow stochastic indicator to measure a stock's Momentum.**

A slow stochastic indicator is made up of two lines: a slow-moving line and a quick-moving line. When the quick-moving line falls **BELOW** the slow-moving line, more people are selling the stock than buying. These are the stocks that will likely fall in price.

And when the quick-moving line crosses **ABOVE** the slow-moving line, more people are buying the stock than selling. These are the stocks you want to own for quick, explosive gains. For example...

On Oct. 13, my *MST System* identified **Intel Corp. (INTC:NYSE)** as a stock with rising Momentum. Here's what its chart looked like...

As you can see from the chart above, INTC's fast-moving stochastic line (in orange) crossed above the slower-moving line (black) at 1

p.m. This signaled that the bulls were outpacing the bears...and INTC was a likely candidate to rise -- quickly. Knowing this, I recommended the November 2003 30 Calls (INQKF) for \$1.90 a contract.

**In the next 48 hours, INTC stock rose 7.55%. Meanwhile, our MST-recommended calls rose 68%! That means 9.1 times more money than the best stock traders on Wall Street.**

But I'm getting ahead of myself. Before an option can be recommended as a certified Triple Play, the underlying stock has to have Momentum, Strength and Trend all moving in the same direction at the same time.

I knew Intel had Momentum, but could it complete the Triple Play with Strength and Trend? Take a look for yourself...

## **Part Two of a Triple Play: Strength**

After isolating the stocks with Momentum on their side, my *MST System* measures a stock's Strength using a relative strength index.

Without boring you with details, the RSI moves up or down based on a stock's closing price relative to the last 14 trading days. If a stock closes near the top of its 14-day trading range, the Strength reading will move up. If a stock rises and can't close near the day's high, the Strength reading will fall.

As you can see from the chart below, INTC's Strength reading was rising by 1 p.m. -- in unison with the Momentum indicator. (Its RSI reading jumped almost 20 points in less than two hours -- a huge bullish move!)

To me, this was a clear indication that the bulls were out in full force. Take a look at the chart, and you'll see what I mean...

### Triple Play Part 2: Strength

No doubt about it, Intel had Momentum and Strength rising at the same time, which meant it was two-thirds of the way to registering a Triple Play. When the Trend indicator confirmed the Triple Play at 3 p.m. that same day, I knew Intel was set to rise...and explosive profits were close at hand...

## The Final Piece of the Triple-Play Puzzle: Trend

Guarantees are hard to make on Wall Street. But I can ensure you one thing. If you trade with a stock's Trend, you can always make money.

**Made \$2,300 in 48 hours!**

*'Got in @ 1.85 for 20*

How do you do that?

The *MST System* measures Trend by using what's called a Moving Average Convergence/Divergence indicator. Again, this indicator is made up of two lines: a MACD line and a signal line.

*contracts, tried to get greedy but still sold @ 3.00. Thanks for the fast 48 hour profit, look forward to many more.'*

-- MST trader S.T.L.

When the MACD line crosses above the signal line, you have confirmation that a stock is in a legitimate uptrend. And when the MACD line falls below the signal line, you can be sure the stock is heading down.

### Triple Play Part 3: Trend

Just before 3 p.m. on Oct. 13, the MACD line (in black) crossed above the signal line (in orange) -- confirming the signal that INTC was in the beginning stages of an uptrend. That was all I needed to see. The Triple Play was now complete. INTC had Momentum,

Strength and Trend all rising at the same time. It was due to pop up -- and quickly.

## **Put All Three Trends Together, and You've Got a Triple-Play Winner Up to 88% of the Time**

When a stock has Momentum, Strength and Trend all moving at the same time and in the same direction, a Triple Play is in the works...which means you're on the verge of explosive profits. Take a look at the INTC's Triple Play chart, and the picture becomes clear...

## Intel's Triple-Play Formation

- The **Momentum** indicator turned bullish on Oct. 13 at 1 p.m.
- The **Strength** indicator turned bullish on Oct. 13 at 1 p.m. as well.
- The **Trend** indicator turned bullish on Oct. 13 at 3 p.m.

At this point, I wrote up an e-mail alert recommending the November 2003 30 Calls. **Less than 48 hours later, I told my readers to close out the play for a 68% gain.** Quite frankly, my readers are used to making these types of gains every week. Just listen to what *MST subscribers* Huang and John have to say...

*'James, thanks for your advice. I made \$2,460, getting in @ 1.85, and out @ 2.90!' --MST trader Huong*

*'James, I got in on your recommendation at \$1.90 and got out a few minutes ago at \$2.95, over a 50% profit so I am quite happy with that as you may imagine!!!! Go options go.' -- MST trader John A.*

And it's no wonder why Huong and John did so well. When a Triple Play is triggered, you know a stock has Momentum, Strength and Trend all moving in the same direction at the same time. Odds are, this means the stock is on the verge of a major move.

The last 17 MST-recommended option plays have averaged gains of 43% -- winners and losers combined. That's real money -- enough to change the way you live. And it only takes an average of seven days to make those huge profits!

Let me show you another example...

## Turn a 7.8% Gain Into a 40% Winner in Two Hours

On July 3, the *MST System* saw that **Possis Medical Inc. (POSS:NASDAQ)** was about to pop up. Right as the market opened, POSS triggered a BUY reading, so I immediately looked at the charts. Here's exactly what I saw...

### 5 Times Your Money in 24 Hours

As you can see, Possis Medical had Momentum, Strength and Trend all rising at the same time...a very bullish sign.

- The **Momentum** indicator turned bullish on June 30, 2003.
- The **Strength** indicator turned bullish on July 2, 2003.
- The **Trend** indicator turned bullish on July 7, 2003.

Based on my experience as a technical trader, I expected Possis to jump up 5% to 10% in a hurry. And I knew if that happened, a call option would make at least three times that -- if not more. So I immediately sent out an MST E-mail Alert to my readers telling them to buy the Possis Medical October 12.5 Calls.

**In the next few hours, POSS stock jumped 7.8% -- just as I expected. Meanwhile, the call option I recommended rose 40%!** So a few hours later, I quickly sent out an alert saying, '*Take your money off the table.*'

Think about that for a second...

While the average trader on Wall Street made 7.8% on POSS stock that day, MST traders could have made 40%. **That's 5.1 times more money in exactly the same amount of time.** Which kind of gains would you rather have...7.8% or 40%?

What's remarkable about having the *MST System* on your side is that 40% gains are common. In fact, all 17 trades I've recommended using the *MST System* have averaged 43% gains -- losers included! (And there have only been two losers.) That's an 88% success rate.

## **Make 7 Times More Than Wall Street's Top Traders**

On the same day the POSS trade was made (and ultimately closed for a 40% gain), the *MST System* found a second Triple Play brewing in a company called **Benchmark Electric (BHE:NASDAQ)**.

Again, I went to the MST charts, and here's what I saw...

## The BHE Triple Play: 55% in 6 Days

- The **Momentum** indicator turned bullish on June 26, 2003.
- The **Strength** indicator turned bullish on July 1, 2003.
- The **Trend** indicator turned bullish on July 3, 2003.

As you can see, BHE had Momentum, Strength and Trend all rising -- meaning a Triple Play was about to hit. Once again, I expected a quick 5% to 10% rise in BHE's stock price. And if I was right, anyone could make several times more than that playing

### Sourpuss or Stock Market Genius?

When Bill Bonner, author of the *NY Times* # 1 Business Bestseller - *Financial Reckoning Day*, predicted the dot.com collapse, *Money* magazine

the MST recommended option.

Everything checked out, so I recommended the August 35 Call for \$1.90. The result? Another winner!

**In six days, the BHE Calls jumped 55% off a 7.47% move in the stock!** So we quickly were able to take our gains off the table. This time, those who got in were able to make 7.36 times MORE than they would have had they just went long BHE stock.

After just two trades, you could've turned a total stock move of 15.27% into total options gains of 95%. That's 6.22 times more than other traders!

called him a sourpuss, but *Worth* magazine says he's a genius. He said the 'New Era' was a fraud as early as the autumn of '99, when almost everyone thought it was for real. Six months later, the New Era was history.

We'd like to offer you **The Daily Reckoning**, an irreverent mix of contrarian commentary and as one reader points out '*...monetary sense in a world gone fiscally mad...*' Nothing else like it on the Internet... and it's free. You can begin your FREE subscription to **The Daily Reckoning** E-Letter by entering your e-mail address below and clicking 'Subscribe'.

**You won't find more thought provoking writing anywhere on the Internet.**

We value your privacy.

And guess what? In addition to bullish Triple Plays, you'll also make money when stocks are exhibiting bearish Triple-Play formations. Our recent recommendation on 3M is a good example...

**A 2.38% Fall Became a 48% Gain -- in 3 Days!**

I'm sure you've heard of **3M Corp. (MMM:NYSE)**, the huge conglomerate that makes everything from duct tape to medical devices.

On Sept. 2 at 9:27 a.m., the *MST System* uncovered a bearish Triple-Play formation on 3M. Looking at the chart, I expected shares of MMM to fall sharply in the next few days.

Here's what I saw that morning...

- The **Momentum** indicator turned bearish on Sept. 2, 2003.
- The **Strength** indicator turned bearish on Sept. 1, 2003.
- The **Trend** indicator turned bearish on Aug. 25, 2003.

3M stock clearly had Momentum, Strength and Trend all pointing down -- signaling a fall was likely. And it made sense.

After hitting a new 52-week high just days before on Aug. 22, 3M hit some major resistance at the \$145 mark. It was due for a brief correction period, and I knew that would be the perfect situation to make some quick money trading the MMM October 140 Put for \$2.90.

Here's what happened...

Three days after buying put options, MMM stock fell 2.38%. Meanwhile, our October 140 Put rose from \$2.90 to \$4.30. That's a 48% gain!

Anyone who went short MMM on Sept. 2 and covered on Sept. 5 made 2.38%. Hey, that's certainly better than nothing. **But those who made the option play had the chance to make 20 times more in exactly the same amount of time.**

On Aug. 12, it happened again...

## **A 9.2% Pop Turned Into 102% Profits...in 7 Days!**

The second I walked into the office on Aug. 12, I noticed my *MST System* was telling me shares of **eBay Inc. (EBAY:NASDAQ)** were about to shoot higher.

I quickly checked the charts for confirmation, and here's what I saw...

## 102% Profits in 7 Days

- The **Momentum** indicator turned bullish on Aug. 11, 2003.
- The **Strength** indicator turned bullish on Aug. 11, 2003.
- The **Trend** indicator turned bullish on Aug. 12, 2003.

As I expected, EBAY had Momentum, Strength and Trend all rising up at the same time. Based off eBay's Triple-Play formation, there was no doubt in my mind it could easily pop up 5% to 10% in a few short days. And I knew those gains could be multiplied several times over with the September 100 Calls for \$5.20.

One week later, on Aug. 19, our calls were trading for \$10.50 each. **My readers were up 102% in seven days, so I immediately issued a sell alert.**

This was another great win for the *MST System*. EBAY stock rose 9.2% between Aug. 12 and Aug. 19, but the MST recommended option rose 102%.

**You could've made 11 times MORE money than simple stock traders...playing the same move!**

I challenge you to find a better system than this. The *MST System* literally multiplies ordinary stock gains and losses into huge double- and triple-digit winners. And the best part -- it works no matter which way the market trades -- up or down.

When the market rises, there will be plenty of opportunities to buy calls on the hot stocks of the day. And when the market is falling, the *MST System* will recommend puts on the stocks most likely to tumble.

It's a win-win situation. You can make money in ANY MARKET!

*read on*
